TABLE OF CONTENTS

Abstract		i-ii
Preface		iii
List of Tables		ix-x
List of Schemes		xi-xiv
List of Figures		xv-xvii
List of Appendices		xviii
Appendix A: List of Publications		xix
Appendix B: Oral Presentation & Poster Presentation		xx
Abbreviation		xxi
	Chapter I	
	A review on heterogeneous catalysis, metal nanocomposites and catalytic applications	1-22
I.1.	Catalysis	2
	I.1.1. Homogeneous catalysis	2
	I.1.2. Heterogeneous Catalysis	2
	I.1.3. Nanocatalysis	2
I.2.	Heterogeneous supports, Metal Nanocomposites and Catalytic Applications	3
	I.2.1. Ordered Mesoporous silica	3
	I.2.2. Zeolites	6
	I.2.3. Metal Oxides	6
	I.2.4. Layerd double hydroxide	10
	I.2.5. Magnetic materials	10
	I.2.6. Charcoal	11
	I.2.7. Carbon nanotubes	13
	I.2.8. Graphene oxides	13
	I.2.9. Organic polymers and related molecules	17
I.3.	References	22
	Chapter II	
	Synthesis of organic disulfides from thiocyanates promoted by poly-ionic resins hydroxide	23-36
II.1.	Introduction	24

II.2. Present Work: Background and Objective 25
II.3. Present work: Result and Discussion 26
II.4. Conclusion 32
II.5. Experimental section 32
II.5.1. General information 32
II.5.2. General procedure for the preparation of disulfide 33
II.5.3. Physical properties and spectral data of compounds 33
II.6. References 36

Chapter III

Copper oxide nanoparticles embedded on macroporous poly–ionic resins (CuO@ARF): Applications to on–water C−S cross–coupling and synthesis of heterocyclic scaffold phenothiazine 37-53

III.I. Introduction 38
III.2. Present Work: Background and Objective 39
III.3. Present work: Result and Discussion 41
III.3.1. Preparation of the heterogeneous CuO (CuO@ARF) 41
III.3.2. Characterization of CuO@ARF 41
III.3.3. Catalytic activity of CuO@ARF 42
III.3.4. Hot filtration test 46
III.3.5. Recycling experiments 46
III.3.6. Further application 47
III.4. Conclusion 47
III.5. Experimental section 48
III.5.1. General information 48
III.5.2. Preparation of CuO@ARF 49
III.5.3. General procedure for C−S cross–coupling reaction 49
III.5.4. Preparation of phenothiazine from selective iodo-product using Pd-BINAP catalyst 50
III.5.5. Preparation of phenothiazine from selective iodo-product using CuO@ARF catalyst 50
III.5.6. Physical properties and spectral data of compounds 50
III.6. References 53

Chapter IV

	Pd/Cu bimetallic nanoparticles embedded in macroporous ion-exchange resins: An excellent heterogeneous catalyst for the Sonogashira reaction	54-70
IV.1.	Introduction	55
IV.2.	Present Work: Background and Objective	56
IV.3.	Present work: Result and Discussion	58
	IV.3.1. Preparation of Heterogeneous Pd/Cu composite	58
	IV.3.2. Characterizations of Pd/Cu−ARF	59
	IV.3.3. Catalytic Activity of Pd/Cu−ARF(II)	63
	IV.3.4. Heterogeneity test	65
	IV.3.5. Test for Recyclability	66
IV.4.	Conclusion	66
IV.5.	Experimental section	66
	IV.5.1. General information	66
	IV.5.2. Preparation of Pd/Cu−ARF(I) & Pd/Cu−ARF(II)	67
	IV.5.3. Sonogashira cross–coupling reaction using Pd/Cu−ARF(II)	67
	IV.5.4. Suzuki–Miyaura cross–coupling using Pd/Cu−ARF(II)	68
	IV.5.5. Physical properties and spectral data of compounds	68
IV.6.	References	70

Chapter V

	Pd/Cu bimetallic nanoparticles embedded in macroporous ion-exchange resins: Further application to Suzuki–Miyaura and Mizoroki–Heck reactions	71-83
V.1.	Introduction	72
V.2.	Present Work: Background and Objective	72
V.3.	Present work: Result and Discussion	73
	V.3.1. Pd/Cu−ARF(II) catalyzed Suzuki–Miyaura reaction	73
	V.3.2. Pd/Cu−ARF(II) catalyzed Mizoroki–Heck reaction	74
	V.3.3. Comparative study	76
	V.3.4. Recycling experiments	76
	V.3.5. Characterization of recovered catalyst	77
V.4.	Conclusion	77

V.5. Experimental section 78
V.5.1. General information 78
V.5.2. Preparation of Pd/Cu−ARF(II) 78
V.5.3. Preparation of Pd−ARF 78
V.5.4. General procedure Suzuki–Miyaura cross–coupling using Pd/Cu−ARF(II) 78
V.5.5. General procedure Mizoroki–Heck cross–coupling using Pd/Cu−ARF(II) 79
V.5.6. Preparation of 3-Methylindole 79
V.5.7. Physical properties and spectral data of compounds 80
V.6. References 83

Chapter VI

Graphene oxide as "carbocatalyst" for one-pot sequential dehydration–hydrothiolation of secondary aryl alcohols and chemoselective thioacetalization of aldehydes 84-111
VI.1. Introduction 85
VI.2. Present Work: Background and Objective 85
VI.3. Present work: Result and Discussion 89
VI.3.1. Graphene oxide preparation and characterization 89
VI.3.2. Sequential dehydration–hydrothiolation reaction 89
VI.3.3. Thioacetalization of Aldehydes 94
VI.4. Conclusion 101
VI.5. Experimental section 101
VI.5.1. General information 101
VI.5.2. Preparation of Graphene Oxide 101
VI.5.3. General procedure for one-pot sequential dehydration–hydrothiolation reaction 102
VI.5.4. Physical properties and spectral data of compounds 102
VI.5.5. General procedure for the preparation of dithioacetal 106
VI.5.6. Physical properties and spectral data of dithioacetals 106
VI.6. References 111

Chapter VII

Ni(0) supported with reduced graphene oxide (RGO): Efficient 112-126

heterogeneous catalyst for Kumada–Corriu cross–coupling reaction
VII.1. Introduction 113
VII.2. Present Work: Background and Objective 114
VII.3. Present work: Result and Discussion 116
VII.3.1. Ni/RGO catalyst in Kumada–Corriu cross–coupling reaction 116
VII.3.2. Recovery and reusability of the catalyst 119
VII.3.3. Characterization of recovered catalyst 121
VII.4. Conclusion 122
VII.5. Experimental section 123
VII.5.1. General information 123
VII.5.2. Synthesis of Ni/RGO composite materials 123
VII.5.3. Representative procedure for Kumada–Corriu reaction using Ni/RGO-40 124
VII.5.4. Physical properties and spectral data of compounds 124
VII.6. References 126

Chapter VIII

Ni(0) supported with reduced graphene oxide (RGO): Efficient heterogeneous catalyst for C−S cross–coupling reaction 127-140
VIII.1. Introduction 128
VIII.2. Present Work: Background and Objective 128
VIII.3. Present work: Result and Discussion 131
VIII.3.1. Ni/RGO catalyst in C–S cross–coupling reaction 131
VIII.3.2. Recovery and reusability of the catalyst 135
VIII.3.3. Characterization of recovered catalyst 135
VIII.4. Conclusion 136
VIII.5. Experimental section 137
VIII.5.1. General information 137
VIII.5.2. General procedure for C–S cross–coupling using Ni/RGO-40 137
VIII.5.3. Physical properties and spectral data of compounds 137
VIII.6. References 140
Bibliography 141-159
Index 160-163
