Figures

1.1	Natural habitat of *Hippophae salicifolia*	7
1.2	*H. salicifolia* plants	8
1.3	Fruits and seeds of *H. salicifolia*	9
1.4	Root nodules in different forms	10
1.5	*H. salicifolia* as sustainable means	11
1.6	Distribution of *Hippophae* L. in Europe and Asia.	12
3.1	Location map of study area in Indian sub-continent	47
3.2	Map (closer view) of study area	48
3.3	Sample datasheet used for field studies	49
3.4	Graphical representation PCR cycles	65
3.5	EMBL format used for submission of *Frankia* sequence	69
4.1	Ecological maps of the study area using	73
4.2	Pie chart showing %age of area covered by different land forms	74
4.3	Graph representing IVI sequence of vegetation	81
4.4	Quantification graph from riverine and non-riverine areas	88
4.5	Germination of seeds in different soil based media.	91
4.6	Different stages of growth raised from treated seeds	92
4.7	Treated cuttings raised in different soil compositions	95
4.8	Reducing power assay of leaves and barks	99
4.9	Correlation between DPPH and total phenol	101
4.10	Transverse section of root nodule under light microscope	110
4.11	Microscopic view of *Frankia* strains isolated from pure culture	111
4.12	Gel electrophoresis of PCR product of *Frankia*	113
4.13	Partial 16S rRNA sequence of uncultured *Frankia*	114
4.14	Phylogenetic dendrogram of *Frankia* sequence	115
4.15	PCR-RFLP of *Frankia* DNA	117
4.16	PCR-RFLP dendrogram	118
