

CONTENTS

	<u>CHAPTER-I</u>	<u>Page</u>
	INTRODUCTION	1-20
1.1	Motivation	1
1.2	Active Networks	2
1.3	Active Network Elements	2
1.4	Inductor Realization	4
1.5	Filters	5
1.6	Oscillators	6
1.6.1	The Sinewave Generators	7
1.6.2	Nonlinear Systems	8
1.6.3	The Periodic Solution	9
1.6.4	Relaxation Oscillation	10
1.7	Scope of the Work	11
	References	15

CHAPTER-II

	ACTIVE RC REALIZATION OF GROUNDED INDUCTOR WITH OPERATIONAL AMPLIFIERS	21-33
2.1	Introduction	21
2.2	The RL Impedance	21
2.2.1	The Bilinear RL Impedance	23
2.2.2	The Linear RL Impedance	26
2.2.3	The Ideal Inductor	27
2.2.4	Sensitivity	28
2.3	Filter Realization	30
2.4	The Oscillator	30
2.5	Results	31
2.6	Conclusion	31
	References	33

CHAPTER-III

A LOSSLESS FLOATING INDUCTOR REALIZATION : TWO NEW APPROACHES	34-43
3.1 Introduction	34
3.2 Realization Approaches	35
3.2.1 Approaches from the 3 - Port Gyrator Model	35
3.2.2 Approach from the Ladder Network	36
3.3 The Realized Inductance	37
3.4 Nonideality of Inductance Due to Component Tolerance	37
3.5 Sensitivity	39
3.6 Circuit Stability	39
3.7 Experimental Results	40
3.8 Conclusion	40
References	42

CHAPTER-IV

INDUCTORLESS FILTER REALIZATION SCHEME : A GENERAL APPROACH	44-56
4.1 Introduction	44
4.2 The Generalization of this All-pass Filter	45
4.3 High, Low, Band-pass and Notch Filter Realization	50
4.3.1 High-pass Filter Realization	51
4.3.2 Band-pass Filter Realization	52
4.3.3 Low-pass Filter Realization	52
4.3.4 Notch Filter Realization	53
4.4 Consideration of the Finite Gain-Bandwidth Product of the Operational Amplifier	53
4.5 Conclusion	54
References	55

CHAPTER-V

	SINGLE ELEMENT CONTROL SINEWAVE OSCILLATOR	57-69
5.1	Introduction	57
5.2	Basic Theory	58
5.3	The Circuits	60
5.4	Stability and Sensitivity	62
5.5	The VCO's and the Experimental Results	65
5.6	Frequency Limiting by Bandwidth of the Amplifiers	66
5.7	Conclusion	67
	References	68

CHAPTER-VI

	SINUSOIDAL OSCILLATION WITH AN EMITTER COUPLED DIFFERENTIAL PAIR	70-82
6.1	Introduction	70
6.2	Circuit Description	71
6.3	Condition of Oscillation and Frequency	72
6.4	Choice of the Circuit Elements	74
6.4.1	Choice of the Transistors	74
6.4.2	Choice of Frequency Determining Elements	75
6.4.3	Choice of Common Emitter Resistor	76
6.4.4	Choice of other Circuit Components	76
6.5	The Experimental Circuit and Results	77
6.6	Conclusion	78
	Appendix-6.1	80
	References	82

CHAPTER-VII

	NON-LINEAR OSCILLATIONS USING ANTISYMMETRIC TRANSFER CHARACTERISTICS OF A DIFFERENTIAL PAIR	83-101
7.1	Introduction	83
7.2	The System Equation	84

7.3	Limits of Parameter Values	87
7.3.1	Ratio of the Resistance m	87
7.3.2	Ratio of the Capacitors n_1 and n_2	87
7.3.3	The Circuit Conductance G	88
7.3.4	The Parameter β	89
7.3.5	The Parameter ϵ	89
7.3.6	Effect of Control of ϵ and/or β	90
7.4	The Solution of the Differential Equation	91
7.5	Computerized Solution and Experimental Results	91
7.6	Effects of ϵ and β on Distortion and Amplitude	93
7.7	The Voltage Controlled Oscillator	94
7.7.1	The Circuit and the Analysis	95
7.7.2	Practical Scheme	97
7.7.3	Discussions	98
7.8	Conclusion	98
	Appendix-7.1	100
	References	101

CHAPTER-VIII

	AN INSENSITIVE LINEAR SINGLE-ELEMENT-CONTROL PULSE GENERATOR	102-119
8.1	Introduction	102
8.2	The Scheme and Frequency of Oscillation	104
8.3	The Operating Point and Value of g	106
8.4	Effect of Non-ideal Current Source	107
8.5	Sensitivity to Supply, Temperature and Passive Parameters	109
8.6	Results and Discussion	114
8.7	Conclusion	118
	References	119

CHAPTER-IX

	CONCLUSION	120-124
9.1	Introduction	120
9.2	Brief Outline of the Work	120
9.3	Final Comments	123
	References	124
