

TABLE OF CONTENTS

PREFACE	III
LIST OF TABLES	XI
LIST OF FIGURES	XIV
CHAPTER 1	
Introduction	1-16
1.1. Health care	1
1.2. Examination procedures to paediatric patients	2
1.3. Usage and benefits.	6
1.3.1. Levels of usage of a technical artifact	6
1.3.2. Usage of expert systems	7
1.3.3. Benefits	10
1.4. Objective and goals of the study	12
1.5. Summary of the work	13
References	15
CHAPTER 2	
The Medical Domain	17-52
2.1. Introduction	17
2.2. Diversity of Medical Domain	17
2.2.1. Extremely Sensitive	18
2.2.2. Uncertain and Incomplete in nature	19
2.2.3. Huge in size	19
2.2.4. Unstructured	19
2.2.5. High Degree of Complexity	20
2.2.6. No Standard Terminologies	20
2.2.7. High variability of expression	20
2.2.8. Applicability/Usability	21
2.2.9. Controlled by law and ethics	21
2.3. Impact of Medical Domain in Society	22
2.4. Medical Reasoning	23
2.5. The Heuristic Nature of Medical Decisions	24
2.5.1. Vagueness and impreciseness of Medical Knowledge	25
2.6. The Paediatric domain	26
2.6.1. Statistical Importance	28

2.6.2. Children in developing countries	30
2.6.3. Age related health problems in India	31
2.6.4. Burden of the diseases	33
2.6.5. Indicators and denominators in India	36
2.6.6. Importance of reducing low birth weight (LBW) rates	42
2.6.7. Socio-cultural and economical problems in India	43
2.7. Integrated Management of Neonatal and Childhood Illnesses in India	45
2.8. Status of Rural Health Scenario in India	47
References	50

CHAPTER 3

Medical Informatics and Cyber Health Care	53-79
3.1. Introduction	53
3.2. Focus of medical informatics applications	54
3.3. Medical informatics and health care professional	56
3.4. Landmarks of medical informatics applications	56
3.5. Artificial intelligence in medicine (AIM)	57
3.6. Internet and World-Wide-Web applications	59
3.7. Telemedicine	60
3.7.1. Advantages of telemedicine	62
3.7.2. Telemedicine Usage Models	63
3.7.2.1. Real-time	63
3.7.2.2. Store and forward	63
3.7.2.3. Home health telemedicine	63
3.7.3. System requirements	64
3.7.4. Users requirements	65
3.8. Barriers before development of telemedicine	66
3.9. Health care scenario of telemedicine in India	67
3.10. Cyber healthcare	73
3.10.1. Cyber medicine	73
3.10.2. Cyber physician	74
3.10.3. Transformation of doctor-patient relations	75
3.10.3.1. Category of CP consultations	76
3.11. Conclusion	77
Reference	78

CHAPTER 4

Expert Systems Technology and the Medical Domain	80-110
4.1. Introduction	80
4.2. Expert systems technology	81
4.2.1. Categories and application areas of expert systems	81
4.2.2. Expert systems in Medicine.	85
4.2.3. Typical features of an expert system	89
4.2.4. Life cycle of an expert system	90
4.2.5. Components of an expert system	92
4.2.6. Classifications of expert systems	94
4.2.6.1. Based on reasoning	94
4.2.6.2. Based on other technical issues	96
4.3. Why it is an expert system domain?	100
4.4. What requirements the domain lays on an expert system?	102
4.5. Discussions	104
References	106

CHAPTER 5

Knowledge Engineering: Techniques & Tools	111-142
5.1. Introduction	111
5.2. Levels of knowledge	113
5.3. Knowledge categories	113
5.4. Knowledge acquisition	114
5.4.1. Sources of knowledge	116
5.5. Methods of knowledge acquisition	116
5.5.2. Semi-automatic methods	118
5.5.3. Automatic methods	118
5.6. Problems in knowledge acquisition	118
5.7. Knowledge acquisition in the context of present work	119
5.8. Knowledge representation methods	120
5.8.1. Logic	120
5.8.2. Semantic networks	122
5.8.3. Rules	123
5.8.4. Frames	125
5.8.5. Scripts.	126
5.8.6. Object-Attribute-Value Triplets	127

5.8.7. Object Oriented Methodology	128
5.8.7.1. Classes	128
5.8.7.2. Instance objects.	128
5.8.7.3. Attributes and methods/operations	128
5.8.7.4. Inheritance	129
5.8.8. Knowledge acquisition tools	129
5.9. Expert systems development and O-O technology	132
5.10. Analysing KR schemes	133
5.11. Some ES and ES development tools using different KR-schemes	135
5.12. Object-oriented knowledge structure for Management of Child Fever	137
5.13. Discussions	137
References	139

CHAPTER 6

Selection of an appropriate tool for ES development	143-160
6.1. Introduction	143
6.2. Points to contemplate	146
6.2.1. General purpose tool not available	146
6.2.2. Single or multiple tools?	146
6.2.3. In search of a bird after constructing a cage	147
6.2.4. Exaggerated claims from vendors/agents	148
6.2.5. Non-standard terminologies	148
6.2.6. Miscellaneous issues: Price, training and documentation support	148
6.2.7. Language, shell or toolkit	148
6.2.8. Left no stone unturned - Is it practically feasible?	151
6.2.9. Potentially active research field	151
6.2.10. Any unique framework?	151
6.3. ES building tools	152
6.3.1. Tools' capabilities	154
6.4. Level5 Object	155
6.4.1. What is Level5 Object?	155
6.4.2. What kinds of problems are best solved with Level5 Object?	156
6.4.3. Capabilities of Level5 Object	157
6.5. Requirements vs. capabilities	157
6.6. Discussions	159
References	160

CHAPTER 7

Uncertainty Management in Peadiatric Problems	161-172
7.1. Introduction	161
7.2. Sources and nature of inexact Information	162
7.3. Tools for managing Inexact Information	164
7.4. Suitability analysis	166
7.4.1. Bayesian probability theory	166
7.4.2. Dempster/Shافر theory of evidence	167
7.4.3. Stanford certainty factor model	167
7.4.4. Fuzzy set theory	168
7.4.5. Non-monotonic reasoning	169
7.5. Discussion	169
References	170

CHAPTER 8

Web-based Medical Informatics: A study	173-188
8.1. Introduction	173
8.2. Physiology of fever	175
8.2.1. Recommendation for Infant	178
8.3 Fever phobia	178
8.3.1. Parents' versus physicians' Preferences	179
8.4. Materials and Methods	180
8.4.1. Searching the Web	180
8.4.2. Assessing the sites	180
8.5. Results	185
8.6. Conclusion	185
References	187

CHAPTER 9

A Web Accessible Knowledge-based Advisory System for Peadiatric Fever Management	189-211
9.1. Introduction	189
9.2. Benefits of using expert systems through the Internet	192
9.3. The web	195

9.4. Perl	196
9.5. Interrelation between Perl, CGI and the web	198
9.6. Expert systems on the net	199
9.7. Connecting ES to web-site	200
9.7.1. Solution alternatives	200
9.7.2. Technology requirements in transference	201
9.7.2.1. Web connectivity	201
9.7.2.2. Database connectivity	201
9.7.2.3. Image processing and GUI	201
9.7.2.4. Knowledge processing and inference	202
9.7.2.5. Procedural	202
9.7.2.6. Hardware and setup	202
9.8. Tools and languages available	202
9.9. Web based version of child fever management at home	203
9.9.1. Parameters of febrile child considered in CFM	204
9.9.2. Knowledge engineering	205
9.9.3. Architecture of CFM	206
9.10. Implementation	208
9.11. Performance evaluation	208
9.12. Discussions and conclusion	209
References	210

CHAPTER 10

Neonatal Resuscitation Management using Case-Based Reasoning	212-240
10.1. Introduction	212
10.2. An overview of GS model	216
10.2.1. Definitions	216
10.2.1.1. Feature weight (FW)	217
10.2.1.2. Case weight (CW)	217
10.2.1.3. Relative feature weight (RFW)	217
10.3. System analysis and architecture for feature selection	217
10.4. Reasoning aspects	220
10.4.1. Category	220
10.4.2. Category selector	220
10.4.1.1. Relative feature weight generator	221
10.4.3. Optimization testing	221
10.5. Theoretical foundation of the classifier	222

10.5.1. Feature vector (F)	222
10.5.2. Bias vector (Φ)	222
10.5.3. Synapse matrix (ω)	223
10.5.4. Activation value (X) and the system output (Y)	224
10.6. Classifier system architecture	225
10.7. Case illustrations	227
10.7.1. Case study for Type-I Illness	229
10.8. Conclusion and discussion	237
References	238
APPENDIX A: Results of case studies for type-II and type-III illness of resuscitation.	242
APPENDIX B: Publications of Sanjay Kumar Datta	250
ADDENDUM : Fulfillment of the total objectives of the thesis and Future Scope	253
