

Acknowledgement

Like my subject of thesis, "the life is non-linear". In this non-linear life one planted upon me the idea of such a research. He is the research guide of my thesis, Dr. Pranab Krishna Chanda. It is his inspiration that led me to this stage where I can at least have the courage to convey my earnest regards to the makers of mathematical physics. Without his inspiration and guidance, it would have been impossible for me to start and complete this work. I could overcome numerous difficulties during this work with his active and sincere efforts. No word is sufficient for him to convey my regards. Truly speaking, he was much more than a research guide in my life. His affection worked as a life support system to me. He was like my father in absence of my own father whom I lost in my early days.

We know, study is a continuous process where one needs some important pillars to continue the flow. So I thank those pillars in my life -- Kajol sir, Samir sir, Dipak Paul sir, Dr. Kamal Nandi sir. I also thank Dr. S. D. Sarkar, Prof. S. Koronjai and other teachers of Mathematics Department, N. B. U. where I got my higher education in Mathematics. This work cannot be complete without a mention of their cooperation and inspiration.

I earnestly convey my regards to my father, mother, my elder brothers, Boudies, Didi and Jamai babu for their constant inspiration during my work. I also convey my thanks to my little nephew 'Tana & Rup'. They saved me from all the hazards of daily life and enabled me to remain engaged with my studies.

I also convey my earnest regards to Dr. Nita Chanda for her constant inspiration and motherly support. Thanks to young Proloy for his company, which was like fresh air to me during the struggle in my research work.

Thanks are not enough for my nearest friend Dr. Kanak Kanti Baishya who inspired me constantly and helped me in different critical situations during my research work. I also convey my thanks to some of my friends, Junior & senior, like Ajoy da, Subhasis da, Susanto da, Amritendu and all the teaching & non teaching staff of my Siliguri B. Ed. College without whose support it would have been difficult for me to complete this research work.

I convey my regards to the Professors & staff of the Department of Mathematics, University of North Bengal and the officers & staff of the Registrar office, University of North Bengal who helped me on every occasion.

And, at last, not the least, I must thank Bishnu Paul & Bishwanath Sarkar who helped me to prepare the bound volumes of the thesis work.
