

Acknowledgements

All these years of my Ph.D. programme seems like a little moment. Extended, standing still. Just yesterday as if. The help, cooperation and support of many associated directly or indirectly enabled me to complete this onerous task. Many gave me a helping hand and I am privileged to get the opportunity to express my gratitude to some of the most dignified professionals and some of the most beautiful human beings.

My utmost gratitude and admiration goes to my supervisor, Prof. T.K. Chaudhuri, Professor, Cellular Immunology Lab, Department of Zoology, for his expertise, constant encouragement, freedom of work, valuable advices, watchful supervision, and more importantly, the confidence that he has shown on me throughout the entire period of experimentation, and thesis writing. I especially thank him for having shown me the importance of proper planning in research as well as in life. I thank him for helping me in improving my writing and communication skills.

Words are inadequate to express my heartfelt gratitude to my Co-supervisor Dr. Nirmal Kumar Bera, Associate Professor, Department of Psychiatry, North Bengal Medical College & Hospital. He aroused my interest and took much pain to implant the art of Psychiatry in my mind. He satiated my inquisitive penchant for psychiatric illnesses, screened the patients and also stimulated me in course of my study. Through out my tenure, in different phases I always got the spontaneous help from him.

I am sincerely grateful to Prof Sujit K. Das, Professor & Head, Department of Psychiatry, North Bengal Medical College & Hospital, whose innovative and unprejudiced attitude has given me an insight into the field of biological psychiatry. I will always remain indebted for his unfailing co-operation down the course of the study.

It is my pleasure to express my regards for Dr. Parthasarathi Dasgupta, SSO-II, Signal Transduction and Biogenic Amine Lab, CNCI, Kolkata for his unconditional cooperation. His

illuminating guidance helped me to understand many a critical twist, neurotransmitter does in developing psychotic disorders.

I owe a great sense of gratefulness to Dr. C. R. Nayak, Head, Computer Centre, N. B. U, who taught me the art of statistical analysis and has always been with fatherly love and affection.

I thank Prof. J. Pal, Prof. A. Mukhopadhyay, Prof. S. Barat, Dr. Min Bahadur, Mr. Dhiraj Saha, Dr. S. Bhattacharya and Dr. D Das of Department of Zoology for their easy to reach and down to earth attitude. I also thank them for providing each and every possible help in official works, research work.

I am greatly indebted to my colleagues, Mr. Bisu Singh, Mr. Bikas Mitra, Mr. Pokhiraj Guha and Mr. Manoj Lama.. I thank them for creating and maintaining a highly professional at the same time homely environment in the laboratory. Special thanks to Bisu for extending his helping hand whenever I need and showing brotherly attitude towards me.

I thank the teaching and non-teaching staff of the Department, who at various phases of work helped me at the time of need.

I am grateful for the financial support received from Labonyo Prova Bose Trust, Kolkata, and DST, New Delhi.

I also thank to my friends Subhomoy Ghose and Miss Ajita Sarkar for their support.

My adoring thank to my best friend, Mr. Pritish Sarkar for his unconditional moral support during the whole course of my PhD. work. During my ups and downs he was the person who gave me the reasons to smile. He always lends me his hands at the time of need and lifts my morale at the times of despair.

God cannot be with everyone all the times. That's why he made "Mother". A child can never thank her parents enough. God owes his very existence to them. I pay heartfelt gratitude and indebtedness to my mother, without whose help, this PhD thesis could not have been possible. Her blessings stood by me at all odds and her constant inspiration, intelligent guidance and encouragements and always patting at times of achievements helped me to reach the present destination. I pay hurtful thanks to my father, who always shows affection and care. I owe a lot to my loving sister Esha for her

innocent regards, constant care and affection. The togetherness that filled our hearts let us bear all the pressure and failures of life with smiles.

*'Words are really not enough for my niece, my little **Soi**. Whenever I feel depressed, her innocent loving smile gives me the divine pleasure.*

Last but not least, I sincerely like to dedicate my thesis to my loving mother.

..15..th day of July,2009
