

ACKNOWLEDGEMENT

Firstly, I must acknowledge my teacher Professor Bijan Das, Department of Chemistry, University of North Bengal, Darjeeling 734 013, India without whose guidance I could not be a person as I am today. I have received his invariable supervision, valuable suggestions and continuous inspiration throughout the course of this project. Without his loving care, this work could not be presented in this form.

I would also like to express my sincere gratitude to all my teachers who have been the source of inspiration during this course of work which helped me to come out with this text and present before you. Their constructive criticism is highly honoured.

The results of the studies carried out by me at the Department of Chemistry, University of North Bengal, Darjeeling 734 013, India, is presented in this dissertation. So, I can not move forward without expressing my special thanks to the University authorities for providing the laboratory facilities.

Financial support by the Special Assistance Programme of the University Grants' Commission, New Delhi, India is gratefully acknowledged. The assistance of the University Scientific and Instrument Centre, University of North Bengal is also gratefully acknowledged.

I also thank all the fellow research scholars for their help and cooperation during this work.

The inspiration and encouragement that I have received from my parents, as always, have been great, unforgettable and are being gratefully acknowledged.
