

# LIST OF FIGURES

1.1	Molecular arrangements in crystalline solid, liquid crystal and liquid phases	3
1.2	Space filling model of a typical rod-shaped liquid crystal molecule	5
1.3	Basic structural features of thermotropic liquid crystal molecule	5
1.4	Molecular structure of 4-Cyanobiphenyl-4'-heptylbiphenyl Carboxylate (7CBB)	6
1.5	Model for an ideal liquid crystal molecule as a rigid rod, spherocylinder or ellipsoid	6
1.6	Typical molecular structure of discotic liquid crystal and its idealised staking	6
1.7	Liquid crystal Polymer (main and side chain)	7
1.8 (a)	Molecular arrangements in Nematic phase and (b) Schlieren texture of nematic phase	8
1.9 (a)	Molecular arrangements in SmA phase and (b) Typical fan-shaped texture of it	11
1.10 (a)	Molecular arrangements in SmC and (b) Typical broken fan-shaped texture of it	12
1.11 (a)	Schematic illustration of the helical superstructure of the cholesteric phase	14
1.11 (b)	The texture of cholesteric phase (Cholesteric polygonal texture)	14
1.12	The two molecular orientations in the SmC* phase	16
1.13	Spiralling of the director in Sm C* phase and basic geometry of it	16
1.14	The structures of chiral smectic phases, SmC*, SmC* <sub>ferri</sub> and SmC* <sub>anti</sub> (Helical form)	17
1.15	The basic construction of the SSFLC device	18
1.16	Off and On states in a SSFLC display device	19
2.1	Order parameters $\langle P_2(\cos\theta) \rangle$ and $\langle P_4(\cos\theta) \rangle$ versus temperature for the Maier-Saupe theory	30
2.2	Typical scattering geometry showing the incident ( $K_i$ ) and scattered ( $K_s$ ) wave vectors	32
2.3	Schematic setup of differential scanning calorimetry studies	35
2.4	DSC plot of OOBPD {Bis-(4,4/-n-alkoxy-benzylidene)-1,4-phenylenediamines} sample	35
2.5	Experimental setup of a polarizing microscope as used for texture studies	37
2.6	Schematic diagram of the flat film camera	38
2.7	Schematic representation of the X-ray diffraction pattern of an oriented (a) nematic and (b) smectic A phase	39
2.8	Schematic representation of colour data for X-ray diffraction pattern	40
2.9	The angular intensity distribution $I(\Psi)$ vs. angle ( $\Psi$ ) curve	42
2.10	Schematic arrangement for the measurement of refractive indices	45
2.11	A typical dielectric spectra for a Debye type liquid crystal	49
2.12	Cole-Cole plot for a Debye-type spectrum	49
2.13	Cole-Cole plots for a Cole-Cole type spectrum	51
2.14	The molecular aspect of different dielectric absorption peaks	52
2.15	Experimental set up of the dielectric spectrometer	54
2.16(a)	Homeotropic and (b) Homogeneous alignment of liquid crystals	55
2.17	Experimental set up to measure the value of $P_s$	56
2.18	Schematic illustration of the reversal current method using a triangular wave to FLC	57
2.19	Flowchart for the steps involved in a crystal structure determination	59
3.3.1	Molecular formulae, structures and observed transition temperatures ( $^{\circ}\text{C}$ ), literature values	71

3.3.2	X-ray diffraction photograph of ordinary nematic phase (3ccp-fff)	73
3.3.3	Effect of fluorination and temperature on the average intermolecular distance (D)	74
3.3.4	Effect of core structure and temperature on the average intermolecular distance (D)	74
3.3.5	Effect of chain length and temperature on the average intermolecular distance (D)	75
3.3.6	Effect of chain length and temperature on effective molecular lengths (l)	76
3.3.7	Effect of core structure and temperature on effective molecular lengths (l)	76
3.3.8	Effect of fluorination and temperature on effective molecular lengths (l)	77
3.3.9	Variation of density ( $\rho$ ) with reduced temperature ( $T^* = T/T_{NI}$ ) of the compounds with chain length	80
3.3.10	Variation of density ( $\rho$ ) with $T^*$ of the compounds with core structure	80
3.3.11	Variation of density ( $\rho$ ) with $T^*$ of the compounds with fluorination	81
3.3.12	Temperature variation of $n_e$ , $n_o$ and $n_{av}$ of compound 3ccp-f for three wavelengths	82
3.3.13	Temperature variation of $n_e$ , $n_o$ and $n_{av}$ of different compounds for yellow colour (5780 Å)	83
3.3.14	Variation of $\Delta n$ with reduced temperature ( $T^* = T/T_{NI}$ ) of the compounds with fluorination	84
3.3.15	Variation of $\Delta n$ with reduced temperature ( $T^* = T/T_{NI}$ ) of the compounds with chain length	85
3.3.16	Variation of $\Delta n$ with reduced temperature ( $T^* = T/T_{NI}$ ) of the compounds with core	85
3.3.17	Variation of $\alpha_e$ , $\alpha_o$ and $\alpha_{av}$ with temperature for compound 3 (3ccp-fff) for yellow light	86
3.3.18	Variation of $\Delta\alpha$ with reduced temperature ( $T^*$ ) for different compounds	87
3.3.19	Temperature variation of $\langle P_2 \rangle$ and $\langle P_4 \rangle$ for different compounds	89
3.3.20	Variation of $\langle P_2 \rangle$ , obtained from R.I data with $T^*$ of the compounds with fluorination	89
3.3.21	Variation of $\langle P_2 \rangle$ with $T^*$ of the compounds with core structure	90
3.3.22	Variation of $\langle P_2 \rangle$ with $T^*$ of the compounds with chain length	90
3.3.23	Variation of $\Delta n^2$ with NS of the compounds depicting the effect of fluorination	91
3.3.24	Variation of $\Delta n^2$ with NS of the compounds depicting the effect of core structure	92
3.3.25	Variation of $\Delta n^2$ with NS of the compounds depicting the effect of chain length	92
4.3.1	Perspective view of 3ccp-ff and 3ccp-fff molecules with atom numbering scheme	101
4.3.2	Partial packing of 3ccp-ff molecule(a) and 3ccp-fff molecule(b) in the unit cell	106
4.3.3	Crystal structure of 3ccp-ff (a) and 3ccp-fff (b) projected along a-axis	107
4.3.4	Crystal structure of 3ccp-ff (a) and 3ccp-fff (b) projected along b-axis	107
4.3.5	Different types of molecular associations observed in the crystal structure of 3ccp-ff	109
4.3.6	Different types of molecular associations observed in the crystal structure of 3ccp-fff	111
4.4.1	Perspective view of 11CHBT molecule with atom numbering scheme	114
4.4.2	Partial packing of 11CHBT molecule in the unit cell	117
4.4.3	Crystal structure of 11CHBT projected along the axes a and b	118
4.4.4	Different types of molecular associations observed in the crystal structure of 11CHBT	119
4.5.1	Perspective view of 7CBB molecule with atom numbering scheme	122
4.5.2	Partial packing of 7CBB molecule in the unit cell	127
4.5.3	Crystal structure of 7CBB projected along the axes a and b	128
4.5.4	Molecular association observed in the crystal structure of 7CBB	129

5.3.1	Molecular structure and transition temperatures of 5F6T (2' 3' F)	135
5.3.2	Observed textures of chiral smectic phases during cooling	136
5.3.3	X-ray diffraction photographs in different chiral smectic phases	138
5.3.4	Temperature variation of layer spacings in different chiral smectic phases	139
5.3.5	Temperature variations of tilt angles in different chiral smectic phases	139
5.3.6	Optimized geometry of 5F6T (2',3'F), Orientation of dipole moment with respect to principal inertial axes	140
5.3.7(a)	Real part( $\epsilon'$ ) and (b) imaginary part ( $\epsilon''$ ) of dielectric constants with frequency at different temperatures	141
5.3.8(a)	Temperature variation of GM and SM relaxation frequency and (b) thickness dependence of GM relaxation frequency	142
5.3.9	Fitted spectra in SmC* phase (62 <sup>0</sup> C), cell thickness 5.2 $\mu\text{m}$ along with observed data	143
5.3.10	Cole-Cole plot of fitted spectra in SmC* phase (62 <sup>0</sup> C), cell thickness 5.2 $\mu\text{m}$	143
5.3.11	Temperature variation dielectric increment ( $\Delta\epsilon$ ) (cell thickness 5.2 $\mu\text{m}$ )	144
5.3.12	Input and output signals captured in a digital oscilloscope at 44 <sup>0</sup> C	145
5.3.13	Variation of spontaneous polarization ( $P_s$ ) with temperature	146
5.3.14	Temperature variation of rotational viscosity of 5F6T (2',3'F)	147
5.3.15	Variation of $\ln\eta$ against $1000/T$ in SmC* phase	147
6.2.1	Molecular structures of the components of hosts	151
6.2.2	Molecular structures of the dopants – DOP1 (a), DOP2 (b), and DOP3(c)	152
6.2.3	Overall mesophase thermal stability (a) and thermal stability of SmC* phase (b) in the mixtures	154
6.2.4	Variations of average intermolecular distance (D) with temperature	156
6.2.5	Temperature variations of layer spacings (d) in the ferroelectric phase	156
6.2.6	Temperature variation of $P_s$ in LAHS2 (a) and LAHS5 (b) Mean- field model fitted curve is also shown	158
6.2.7	Real (a) and imaginary (b) parts of dielectric constants for LAHS1	159
6.2.8	Real (a) and imaginary (b) parts of dielectric constants for LAHS2	160
6.2.9	Bias dependent dielectric spectra of LAHS1 at 22 <sup>0</sup> C	161
