

TABLE OF CONTENTS

| CHAPTER NO. | TITLE | PAGE NO. |
|----------------|-------------------------------------------------------------------------------------|--------------|
| | LIST OF TABLES | xv |
| | LIST OF FIGERS | xvii |
| | LIST OF SYMBOLS AND ABBREVIATIONS | xxii |
| I. | Introduction and Objectives of the Studies | 1-10 |
| | I.1 Introduction | 2 |
| | I.2 Leather processing – an over view | 4 |
| | I.3 Objective of the Studies | 10 |
| II. | Literature Review | 11-36 |
| | II.1 Introduction | 12 |
| | II.2 Types of curing of raw hides and skins | 14 |
| | <i>II.2.1 Curing process by controlling Temperature</i> | 15 |
| | <i>II.2.2 Curing process by controlling pH</i> | 16 |
| | <i>II.2.3 Curing process by using Toxic Materials</i> | 17 |
| | <i>II.2.4 Curing process by controlling moisture content in hides and skins</i> | 17 |
| | II.3 Draw backs of different curing process | 19 |
| | II.4 Water consumption and pollution load for leather processing | 21 |

| CHAPTER NO. | TITLE | PAGE NO. |
|------------------------|---------------------------------------------------------------------------------------------------------|---------------------|
| II. | II.5 The consumption of water in soaking operation and its pollution load | 25 |
| | II.6 The effect of soaking pollutants in the environment | 26 |
| | II.7 The scope and problems of reuse of water in the soaking process | 27 |
| | II.8 Common effluent treatment plant (CETP) and its operational problems with increased salinity | 27 |
| | II.9 The present status of ETP & CETPs in Indian leather industry | 28 |
| | II.10 Basic principles of salt recovery from saline water | 30 |
| | <i>II.10.1 Desalination Processes</i> | 30 |
| | <i>II.10.2 Draw backs of desalination of saturated salt solution in different processes</i> | 33 |
| | <i>II.10.3 Solar Distillation</i> | 34 |
| | <i>II.10.4 Desalination by Freezing Process</i> | 35 |
| III. | Process Details of Repeated Soaking and Allied Works | 37-120 |
| | III.1 Introduction | 38 |

| CHAPTER NO. | TITLE | PAGE NO. |
|------------------------|-----------------------------------------------------------------------------|---------------------|
| III. | III.2 Materials and Specification of the Equipment / Instruments | 39 |
| | III.2.1 Materials | 39 |
| | III.2.2 Specification of the Equipment / Instruments | 42 |
| | <i>III.2.2.1 Drum for leather processing</i> | 42 |
| | <i>III.2.2.2 Semi circular fleshing knife</i> | 42 |
| | <i>III.2.2.3 Shamming machine</i> | 42 |
| | <i>III.2.2.4 Shaving machine</i> | 43 |
| | <i>III.2.2.5 Setting machine</i> | 43 |
| | <i>III.2.2.6 Staking machine</i> | 43 |
| | <i>III.2.2.7 Toggling machine</i> | 44 |
| | <i>III.2.2.8 Spray booth</i> | 44 |
| | <i>III.2.2.9 Hydraulic press</i> | 44 |
| | <i>III.2.2.10 Pan Balance</i> | 44 |
| | <i>III.2.2.11 Digital pH Meter</i> | 45 |
| | <i>III.2.2.12 Electronic balance</i> | 45 |
| | <i>III.2.2.13 Air Oven</i> | 45 |
| | <i>III.2.2.14 Muffle Furnace</i> | 45 |
| | <i>III.2.2.15 BOD Incubator</i> | 46 |
| | <i>III.2.2.16 Digital Turbidity Meter</i> | 46 |

| CHAPTER NO. | TITLE | PAGE NO. |
|-------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------|
| III. | <i>III.2.2.17 Water bath</i> | 46 |
| | <i>III.2.2.18 Magnetic Stirrer</i> | 47 |
| | <i>III.2.2.19 Thickness Measuring Gauge</i> | 47 |
| | <i>III.2.2.20 Shrinkage Temperature Tester</i> | 47 |
| | <i>III.2.2.21 Water Vapour Permeability Tester</i> | 48 |
| | <i>III.2.2.22 Tensile Strength & % Elongation Measurement Tester</i> | 48 |
| | <i>III.2.2.23 Humidity & Thermometer Meter</i> | 48 |
| | <i>III.2.2.24 Kubelka Apparatus for the Measurement of % Water Absorption</i> | 49 |
| | <i>III.2.2.25 Double Hole Stitch Tear Strength Tester</i> | 49 |
| | <i>III.2.2.26 Grain Crack & Ball Bursting Strength Tester</i> | 49 |
| | <i>III.2.2.27 Colour Rub fastness Tester</i> | 50 |
| | III.3 Process Details of Leather Preparations | 50 |
| | <i>III.3.1 Optimization of drumming period for soaking</i> | 51 |
| | <i>III.3.2 Preparation of sample numbers</i> | 53 |
| | <i>III.3.3 Procedure of marking against sample numbers</i> | 55 |
| <i>III.3.4 Recipe for experimental (laboratory) processing of leather</i> | 64 | |

| CHAPTER NO. | TITLE | PAGE NO. |
|----------------|--------------------------------------------------------------------------------------------|-------------|
| III. | <i>III.3.5 Important information regarding recycling of soak liquor</i> | 69 |
| | <i>III.3.6 Process optimization for soaking</i> | 70 |
| | <i>III.3.7 Recipe for conventional process of leather</i> | 76 |
| | III.4 Soak liquor analysis | 90 |
| | <i>III.4.1 Determination of total dissolved solids in soak liquor</i> | 90 |
| | <i>III.4.2 Determination of salinity (as NaCl) in soak liquor</i> | 91 |
| | <i>III.4.3 Determination of BOD₅²⁰ value in soak liquor</i> | 91 |
| | <i>III.4.4 Determination of COD value in soak liquor</i> | 93 |
| | III.5 Physical and Chemical Testing of Finished Leather | 94 |
| | <i>III.5.1 Conditioning of leather and sampling position</i> | 95 |
| | <i>III.5.2 Method for measurement of thickness and length of finished leather</i> | 96 |
| | <i>III.5.3 Method for measurement of shrinkage temperature of finished leather</i> | 97 |
| | <i>III.5.4 Method for measurement of water vapour permeability of finished leather</i> | 99 |

| CHAPTER NO. | TITLE | PAGE NO. |
|------------------------|-------------------------------------------------------------------------------------------------------------------|---------------------|
| III. | <i>III.5.5 Method for measurement of tensile strength and % elongation at break of finished leather</i> | 100 |
| | <i>III.5.6 Method for measurement of double-hole stitch tear strength of finished leather</i> | 102 |
| | <i>III.5.7 Method for measurement of grain crack strength and ball bursting strength of finished leather</i> | 103 |
| | <i>III.5.8 Method for measurement of absorption of water: Kubelka method- of finished leather</i> | 104 |
| | <i>III.5.9 Method for measurement of dry-rub and wet-rub colour fastness of finished leather</i> | 106 |
| | <i>III.5.10 Method for determination of volatile matter present in finished leather</i> | 109 |
| | <i>III.5.11 Method for determination of total ash content in finished leather</i> | 109 |
| | <i>III.5.12 Method for determination of total chlorides (as NaCl) in finished leather</i> | 110 |
| | <i>III.5.13 Method for determination of total sulphates (as Na₂SO₄) in finished leather</i> | 110 |
| | <i>III.5.14 Method for determination of chromium (as Cr) in finished leather</i> | 111 |

| CHAPTER NO. | TITLE | PAGE NO. |
|------------------------|------------------------------------------------------------------------------------------------------|---------------------|
| III. | III.6 Desalination of Final Soak Liquor | 112 |
| | <i>III.6.1 Alum treatment of final soak liquor</i> | 112 |
| | <i>III.6.2 Solar evaporation of filtered solution</i> | 114 |
| | <i>III.6.3 Proposed improved method of desalination</i> | 116 |
| IV. | Results and Discussion | 121-142 |
| | IV.1 Characterization of Repeated Soak Liquors | 122 |
| | <i>IV.1.1 Discussion on results of TDS in different soak liquor samples</i> | 122 |
| | <i>IV.1.2 Discussion on results of Salinity (as NaCl) in different soak liquor</i> | 123 |
| | <i>IV.1.3 Discussion on results of BOD₅²⁰ in different soak liquor samples</i> | 124 |
| | <i>IV.1.4 Discussion on results of COD in different soak liquor samples</i> | 125 |
| | IV.2 Evaluation of Physical and Chemical Properties of Leathers | 126 |
| | <i>IV.2.1 Discussion on results of Thickness and Length along the back bone</i> | 127 |

| CHAPTER NO. | TITLE | PAGE NO. |
|------------------------|---------------------------------------------------------------------------------------------------------------------|---------------------|
| IV. | <i>IV.2.2 Discussion on results of Shrinkage Temperature of finished leathers</i> | 127 |
| | <i>IV.2.3 Discussion on results of Water Vapour Permeability of finished leathers</i> | 128 |
| | <i>IV.2.4 Discussion on results of Tensile Strength and Percentage Elongation at break of finished leathers</i> | 130 |
| | <i>IV.2.5 Discussion on results of Double-Hole Stitch Tear Strength of finished leathers</i> | 131 |
| | <i>IV.2.6 Discussion on results of Grain-crack Strength and Ball-Bursting Strength of finished leathers</i> | 132 |
| | <i>IV.2.7 Discussion on results of Water absorption on apparent volume and weight of finished leathers</i> | 133 |
| | <i>IV.2.8 Discussion on results of Dry-rub and Wet-rub colour fastness of finished leathers</i> | 135 |
| | <i>IV.2.9 Discussion on results of Volatile Matter Content in finished leathers</i> | 136 |
| | <i>IV.2.10 Discussion on results of Ash Content in finished leathers</i> | 137 |
| | <i>IV.2.11 Discussion on results of Chloride (as NaCl) Content in finished leathers</i> | 137 |

| CHAPTER NO. | TITLE | PAGE NO. |
|-------------------|-----------------------------------------------------------------------------------------------------------------|-------------|
| IV. | <i>IV.2.12 Discussion on results of Sulphate (as Na₂SO₄) Content in finished leathers</i> | 138 |
| | <i>IV.2.13 Discussion on results of Chromium (as Cr.) Content in finished leathers</i> | 139 |
| | IV.3 Discussion on desalination of final soak liquors | 140 |
| | <i>IV.3.1 Discussion on results of Alum treatment of final soak liquor</i> | 141 |
| | <i>IV.3.2 Discussion on results of solar evaporation of filtered soak liquor</i> | 141 |
| V. | Conclusion and Further Scope of Work | 143-147 |
| | V.1 Conclusion | 144 |
| | V.2 Scope of further work | 146 |
| Appendix A | Tables for Soak Liquor Analysis | 148-152 |
| Appendix B | Tables for Physical and Chemical Properties of Finished Leathers | 153-173 |
| Appendix C | Column Charts of Soak Liquor Analysis | 174-178 |
| Appendix D | Column Charts of Physical and Chemical Properties of Finished Leathers | 179-199 |
| | References | 200-206 |
| | List of Publication | 207-208 |
