

LIST OF TABLES

Table	Title	Page no
Chapter 1		
1.	World wide major oil spillage events in last 5 years	5
2.	Evaluation of different petroleum sludge treatment technologies	8
3.	Factors affecting petroleum hydrocarbon biodegradation	10
4.	Biosurfactants produced by microorganisms	15
5.	Microorganisms used in biodegradation of petroleum hydrocarbon	19
6.	Microorganisms involved in aerobic degradation of petroleum hydrocarbons	26
7.	Microorganisms involved in anaerobic degradation of petroleum hydrocarbons	29
8.	Plasmids encoding petroleum hydrocarbons catabolic function	32
9.	Genetic engineering for biodegradation of contaminants	33
10.	Application of genetically modified bacteria for assessing the biodegradation process efficiency	33
11.	Bioremediation agents in NCP product schedule	33
12.	Comparison of transesterification activities of different lipases on different substrates	36
Chapter 2		
1.	Isolation of bacterial colonies from petroleum contaminated sites	61
2.	Comparison of phenotypic and biochemical characteristics of PS11 with <i>Geobacillus</i> sp.	64
3.	Growth of PS11 strain in presence of organic solvents	67
4.	Phospholipid composition of <i>G. stearothermophilus</i> PS11 membranes as affected by crude oil	69
5.	Fatty acid composition of polar phospholipid fraction of <i>G. stearothermophilus</i> PS11 as affected by crude oil	70
6.	Fatty acid categories as affected by crude oil	71
7.	Growth of wild type and plasmid cured PS11 strains in presence of organic solvents	74
8.	Sequence identity of C2,3O from <i>G. stearothermophilus</i> PS11 with other reported C2,3O	78

Chapter 3

1.	Optimization of PS11 lipase production by OVAT method	100
2.	Purification of lipase produced from PS11 strain	101
3.	Effect of different chemicals on lipase stability	103
4.	Effect of different detergents on lipase stability	104
5.	Effect of different organic solvent on lipase stability	104
6.	Effect of methanol on lipase stability	105
