

## LIST OF FIGURES

### Chapter 1

Figure	Title	Page no
1	Structural classification of crude oil components	4
2a	Spread of oil slicks over the water surface	5
2b	Satellite view of the wide spread oil slick on ocean due to oil spillage	5
3	Hydrocarbon degradation rates in soil, fresh water, and marine environments	12
4	Involvement of biosurfactant (rhamnolipids) produced by <i>Pseudomonas</i> sp. in the uptake of hydrocarbons	15
5	Principle of aerobic degradation of hydrocarbons by microorganisms	20
6	Schematic representation of alkane degradation in gram-negative bacteria, showing the locations and functions of the <i>alk</i> gene products	22
7	Metabolic pathway illustrating biodegradation of an <i>n</i> -alkylcyclohexane	23

### Chapter 2

Figure	Title	Page no
1	Strain PS11 showing zone of hydrocarbon (crude oil) utilization.	60
2	Microscopic (100X) view of gram stained cells of PS11 strain	64
3	Phylogenetic analysis of 16S rRNA sequence of PS11	65
4	Growth of <i>Geobacillusstearothermophilus</i> PS11 in absence and presence of crude oil	66
5	Transmission electron micrograph of <i>Geobacillus stearothermophilus</i> PS11cells (exposure 21,000). (a) in absence of crude oil, (b)in presence of 10% crude oil after 24 hours incubation, (c) in the presence of 10% crude oil, after 48 hours incubation.	68
6	Gas chromatography analysis of residual total petroleum hydrocarbons (TPH) and BTEX after 15 days of incubation.	72
7	Isolation of plasmid DNA from PS11strain and its restriction digestion profile.	73
8	Curing of plasmid with acridine orange	74
9	Catechol utilization by transformed JM109 cells. (a) Control w/o inoculum, (b) transformed JM109 cell, (c) wild JM109 cells	75
10	Transformation of <i>E.coli</i> JM109 with plasmid from PS11.	76
11	Gas chromatography analysis of residual total petroleum hydrocarbons (TPH), benzene and ethyl benzene after 10 days of incubation by transformed JM109 cells	77
12	PCR amplification of Catechol 2,3 dioxygenasegene	78

13	Nucleotide sequence of the Catechol 2,3 dioxygenase gene of <i>G. stearothermophilus</i> PS11	78
14	Comparison of deduced amino acid sequence of catechol 2,3-dioxygenase of <i>G. stearothermophilus</i> PS11 with other catechol 2,3-dioxygenase by MULTALIN	79

### Chapter 3

Figure	Title	Page no
1	Kinetics of lipase production by <i>Geobacillus stearothermophilus</i> PS 11	99
2	SDS-PAGE analysis of lipase purified from <i>Geobacillus stearothermophilus</i> PS 11.	101
3	Determination of optimum temperature and temperature-stability of PS11 lipase.	102
4	Determination of optimum pH and pH stability of PS11 lipase	102
5	Application of the purified lipase in biodiesel production. TLC analysis of PS11 lipase catalyzed biodiesel (BD) production using methanol and sunflower oil /olive oil.	106
6	Gas chromatography analysis of biodiesel from sunflower oil. (a) Standard biodiesel, (b) Biodiesel produced by transesterification of sunflower oil by PS11 lipase	107
