

ACKNOWLEDGMENT

Life often turns on small pivots. Such is the case with my initiation in Radiative transfer research. A brief visit to Dr. G.K.Biswas many years back about further studies in this field culminated in this work on polarized Radiative transfer theory. Without Dr.G.K.Biswas and Dr.S.Karanjai's patient guidance, this thesis would never have been possible. I especially appreciate the independence Dr.G.K.Biswas granted me in my research. I thank, "Department of Mathematics", "University of North Bengal", the University library for their relentless help and support. Finally, I thank my parents and wife, Debotri Sarkar, for their continual encouragement and for hours of proof reading. I am grateful to my wife and my child, Siddharth, for their love, and I dedicate this work to them.
