

# INDEX

| <u>TOPIC</u>  | <u>PAGE NO.</u> |
|---|-----------------|
| Summary   | 06.             |
| <u>chapter 1:</u>   |                 |
| Introduction  |                 |
| 1.1 Importance of Radiative transfer theory in Biosphere        | 07.             |
| 1.2 What is Radiative transfer?                                 | 11              |
| 1.3 Why Radiative transfer theory for ocean is important?       | 14.             |
| 1.4 Why polarization?   | 16.             |
| 1.5 Mathematical Methods in Treating Radiative Transfer Theory. | 19.             |
| Principle of Invariance.  | 19.             |
| Invariant Imbedding.  | 21.             |
| Discrete ordinate method.                                       | 22.             |
| Cases Eigen function approach.                                  | 27.             |
| Discrete Space Theory.  | 29.             |
| The Doubling-Adding and the Matrix Operator Methods.            | 30.             |
| The Spherical-Harmonics Method.                                 | 30.             |
| 1.6. Numerical approaches.                                      | 33.             |
| Iteration Methods   | 33.             |
| The Feautrier Method.   | 33.             |
| Integral Equation Approach.                                     | 34.             |
| 1.7. Work done on atmosphere- ocean system.                     | 34.             |

|  |             |
|--|-------------|
| <b>1.8. Monte Carlo Models.</b>  | <b>40.</b>  |
| <b>1.9. Polarization consideration.</b>  | <b>44.</b>  |
| <b>1.10 . Method employed in this work.</b>  | <b>46.</b>  |
| <b><u>Chapter 2:</u></b>   |             |
| <b>Formulation of the Problem.</b>   |             |
| <b>2.1. Geometrical set up for atmosphere-Ocean system.</b>                                    | <b>49.</b>  |
| <b>2.2. Extinction and absorption Coefficient (in general for any type of media).</b>          | <b>51.</b>  |
| <b>2.3. Phase function.</b>  | <b>52.</b>  |
| <b>2.4. General discussion based on some experimentally derived sea-water phase functions.</b> | <b>63.</b>  |
| <b>2.5. Reflection and Transmission.</b>   | <b>67.</b>  |
| <b>2.6. Reflection and transmission in wind-disturbed surface. (Monte Carlo).</b>              | <b>72.</b>  |
| <b>2.7. Radiative transfer equation.</b>   | <b>75.</b>  |
| <b>2.8. Boundary Conditions for non-polarized equation.</b>                                    | <b>79.</b>  |
| <b>2.9. Polarized Radiation Transfer Equation.</b>   | <b>81.</b>  |
| <b>2.10. Boundary Condition for polarized equation of transfer in Flat ocean surface.</b>      | <b>84.</b>  |
| <b>2.11. Reduction of the Equation of transfer.</b>  | <b>86.</b>  |
| <b>2.12. Reduction of Source function.</b>   | <b>91.</b>  |
| <b>2.13. Details of the Reduction of Boundary Condition of flat ocean surface.</b>             | <b>105.</b> |
| <b>2.14. Final set of Radiative transfer equation.</b>   | <b>107.</b> |
| <b>2.15. Determination of characteristic coefficients.</b>                                     | <b>109.</b> |

### chapter 3:

Solution of polarized homogeneous equation of transfer for coupled atmosphere ocean system.

|   |      |
|---|------|
| 3.1. Discretization of equation of transfer                             | 116. |
| 3.2. Directionally Separated and Discretized equations for Atmospheric. | 117. |
| 3.3. Eigen functions and Eigen values.                                  | 122. |
| 3.4. Calculation of Eigen vectors and Eigen values.                     | 130. |
| 3.5. The expression for Eigen vectors.                                  | 133. |
| 3.6. Albedo of ocean surface.   | 142. |

### chapter 4:

Particular & General Solution.

|  |      |
|--|------|
| 4.1. The Infinite Medium Green's Function.   | 145. |
| 4.2. Derivations of equations for the determination of arbitrary constants.            | 155. |
| 4.3. Derivation of orthogonality relations for eigenvectors.                           | 161. |
| 4.4. Derivation of particular solution.  | 167. |
| 4.5. Complete solution.  | 173. |
| 4.6. Consideration of total internal reflection at the interface between the two media | 174. |
| 4.7. Boundary Conditions.  | 176. |
| 4.8. Post processing procedure   | 185. |
| 4.9: Evaluation of integral in equation in (4.8.7).                                    | 188. |
| 4.10. Evaluation of integral in equation in (4.8.8).                                   | 197. |
| 4.11. Evaluation of integral in equation in (4.8.9).                                   | 202. |
| 4.12. Evaluation of integral in equation in (4.8.10).                                  | 208. |

**chapter 5:**

**Numerical results for certain specified dataset for atmosphere and ocean**

**5.1: Model parameters.**

**214.**

**chapter 6:**

**Bibliography.**

**249.**
