

LIST OF FIGURES

CHAPTER I

Figure I.A.1. Few examples of biologically important heterocycles	2
Figure I.B.1. Procedure for the formation of silanol groups on the silica surface	9
Figure I.B.2. Different types of silanol groups, siloxane bridges and internal –OH groups present on amorphous silica surface	10
Figure I.B.3. Synthesis of silica triflate	14
Figure I.B.4. Synthesis of silica-supported dichlorotriazine (Si-DCT) scavenger	15
Figure I.B.5. Preparation of solid silica-sulfonic acid	15
Figure I.B.6. Structure of TsDPEN@SiO ₂	19
Figure I.B.7. Synthesis of silica sulfuric acid (SSA)	19
Figure I.C.1. Commonly accepted schematic representation of GO according to Lerf-Klinowski model	25

CHAPTER II

Figure II.A.1. Different types of imidazopyridine derivatives	31
Figure II.A.2. Representative examples of imidazo[1,2-a]pyridine-based drugs	32
Figure II.B.3. Schematic representation of the synthesis of imidazo[1,2-a]pyridines from variety of starting materials with 2-aminopyridine	33
Figure II.A.4. Schematic presentation of graphene oxide (GO)	39
Figure II.C.5. Comparative FT-IR spectra of GO before use (black), after 1 st (blue) and 2 nd run (red)	45

CHAPTER III

Figure III.B.1. Different way of addition reaction	59
Figure III.E.4.2. The FT-IR Spectra of GO	67

CHAPTER IV

Figure IV.A.1. Iridium and self-assembled copper metal complex of Chiral dithioethers	75
---	----

Figure IV.A.2. An optically active complexes of titanium bearing a cyclohexanediybis(thio) core	75
Figure IV.B.3. Application of iridium complex of chiral dithioethers in asymmetric hydrogenation	76

CHAPTER V

Figure V.A.1. Schematic representation of thioamide group	98
Figure V.A.2. Thioamide-based phosphorescent pincer Pt(II) complexes	100
Figure V.C.3. Single-crystal X-ray structures for thiobenzamides 4a and 4d. Possible contacts or bonding for compounds 4a and 4d Ellipsoids set at 50% probability; all H-atoms are shown	107

CHAPTER VI

Figure VI.A.1. Core structure of some biologically active heterocyclic compounds	117
Figure VI.B.2. Different functionalized scaffolds with their activity	120
