

LIST OF FIGURES

CHAPTER-I	Page No.
Figure-I.1. Bertand's carbene.....	3
Figure-I.2. Unsaturated and saturated <i>N</i> -heterocyclic carbenes.....	4
Figure-I.3. Push-pull synergistic effect.....	5
Figure-I.4. Examples of selected <i>N</i> -heterocyclic carbenes.....	6
Figure-I.5. Bonding modes of NHCs with metals.....	7
Figure-I.6. Different methods for the determination of the donor strength of NHC ligand.....	8
Figure-I.7. Cone angle during the phosphine-metal adduct (left); differences in shape of phosphine- and metal-adduct (right).....	9
Figure-I.8. Percent buried volume ($\%V_{\text{bur}}$).....	10
Figure-I.9. Mechanistic cycle for metal catalyzed cross-coupling reaction.....	11
Figure-I.10. Common types of 5-membered heterocyclic carbenes.....	13
Figure-I.11. PEPPSI themed Pd-NHC complexes.....	18
Figure-I.12. Normal, abnormal and remote <i>NHC</i> -metal complexes.....	24
Figure-I.13. Sulfonate- <i>NHC</i> -Pd(II) complexes for Mizoroki-Heck reaction.....	27
Figure-I.14. Pd-PEPPSI-NHC complexes used in Suzuki-coupling reaction.....	29
Figure-I.15. [PdCl(R-allyl)(NHC)] complexes for Suzuki coupling reaction.....	29
Figure-I.16. Pd-NHC catalysts for Sonogashira coupling developed by Ghosh <i>et al.</i>	32
Figure-I.17. Chiral NHC-Pd complexes for Sonogashira coupling developed by Cao and Shi.....	33
Figure-I.18. Pd-NHC complex used in alcohol oxidation by Sigman.....	37
Figure-I.19. [Pd(NHC)(acac) Cl] complexes used in C-N coupling reaction.....	42
Figure-I.20. Pd-NHC complexes used in amination reaction and/or C-C bond formation.....	43
Figure-I.21. Selective Pd-PEPPSI-NHC for Buchwald-Hartwig amination.....	43
Figure-I.22. NHC-Pd complexes for C-N bond formation reaction.....	44
Figure-I.23. Pd-PEPPSI-NHC complexes for C-S bond formation.....	46
CHAPTER-II	
Figure-II.1. Catalyst-A.....	61
Figure-II.2. Catalyst-B.....	61

Figure-II.3. Ball and Stick representation of catalyst-A.....	72
Figure-II.4. Ball and Stick representation of catalyst-B.....	74

CHAPTER-III

Figure-III.1. Structures of several biologically active quinolones.....	83
Figure-III.2. Benzimidazole base Pd-NHC complex (catalyst-A).....	87

CHAPTER-IV

Figure-IV.1. Synthesis of 4-aryl-2-quinolones via palladium catalyzed process.....	103
Figure-IV.2. Benzimidazole based Pd-NHC complex.....	104
