

Acknowledgement

The last eight years that span the duration of this doctoral study had been very special to me. During this time, I came across a lot of people who helped me to make this endeavour successful, directly or indirectly. This acknowledgement is a little effort to express my gratitude to these persons.

First and foremost I would like to thank my PhD supervisor, Professor Amiya Kumar Panda for his guidance. I am indebted to him for his teachings, supports and careful directions, he provided me. I always found him with a number of interesting perspectives that helped me to broaden my horizons in the field of Nanoscience. It was a privilege to work and learn from such an extraordinary academic whose immense inspirations led this journey to complete.

I am also highly grateful to Professor Anirban Misra for extending my research philosophy toward theoretical and computational chemistry. He taught me to look at the theory of quantum mechanics, computational analysis and beyond, with a number of motivating challenges that really helped me to strengthen my theoretical perceptions. He has always allowed me to enjoy the full academic freedom for pursuing my interest in the theoretical field. It was a pleasure to work with such an academic. I wish to carry his legacy forward.

Apart from my Principle advisor and Co-advisor, I want to express my gratitude to all of my teachers; I have met through this journey of learning.

In this collaborative work, I have got acquainted with many researchers. Among them I would like to thank Dr. Satadal Paul and Dr. Tamal Goswami for sharing their valuable time and feedbacks. We spent significant amount of time in discussing and debating research problems. Apart from them I am grateful to Dr. Debojit Bhattacharya, Dr Sonali Sarkar, Dr. Suranjan Shil, Dr. Moumita Chakraborty, Dr. Sujoy Paul, Dr. Koushik Manna, Dr. Rakesh Kar for their support and assistance during my job-search period.

Besides them, I am blessed with a number of good friends. Manoj, Prashant, Pritam, Priyam, Gourab, Biplab, Pradipta, Raja, Tanushree, Manoswita, Sudip, each of them supported me and made my days here in NBU campus full of moments to cherish. I am also specially thankful to some of friends who always inspired me to do things differently, despite their staying miles apart.

I owe to my parents for their invaluable contributions to my life. My choice of a carrier in research can be attributed to the inclinations of my mother. I would like to express

my deep regards to my parents for their enormous amount of love, cares and dedications for our proper upbringing. I am also grateful to my two elder sisters for their affectionate support and encouragement in pursuing my dreams. I am especially thankful to my little daughter for being the truest love in my life and also to her sitters for their sincere assistance while doing my work without any pause.

This journey would not have been possible to complete without the selfless assistance and support of one person who seeded the patience in me to keep the pace even in my toughest time. I am thankful to him, my husband.
