

Table of Contents

Chapter I	Theoretical approach and Review work	Page no (1-46)
	1,3-dipole	2
	Reactivity profile of 1, 3-dipoles	4
	Nomenclature	5
	Synthesis of nitrones	8-11
	1,3-dipolar cycloaddition reaction	12-15
	Stereoselectivity in nitrono cycloaddition	16-17
	Regioselectivity in nitrono cycloaddition	18-19
	Current literature survey	19-42
	References	43-46
Chapter II	Experimental section	(47 – 101)
	General method for Preparation of <i>N</i> -phenyl/methyl nitrones (1a&1b)	48
	Reaction type I (nitrono 1a with alkenes) in aqueous phase	49
	1. <i>N</i> -methyl maleimide (product 2a & 2b)	49
	2. <i>N</i> -phenyl maleimide (product 3a & 3b)	50
	3. <i>N</i> -cyclohexyl maleimide (product 4a & 4b)	51
	4. Acenaphthylene (product 5a & 5b)	52
	5. <i>p</i> -methoxy <i>N</i> -phenyl maleimide (product 6a & 6b)	53
	6. Tetrachloroethylene (product 7)	54
	Regioselective reactions using nitrono 1a	55
	7. Methyl acrylate (product 8)	55
	8. Styrene (product 9)	56
	9. Methyl vinyl ketone (product 10)	57
	Reaction type II (nitrono 1a with alkynes) using MWI	57
	10. Phenyl methyl propiolate (product 11)	58
	11. Dimethyl acetelene dicarboxylate (product 12)	59
	12. Acetelene dicarboxylic acid (product 13)	59
	13. Propiolic acid (product 14)	60

Reaction Type III (synthesis of spiro isoxazolidines)	61
Nitrone 1b with γ -butyro lactone	61
Nitrone 1a & 1b with enamine derivatives	62
Reaction type IV (synthesis of peptides)	63
Synthesis peptide (product 17a)	63
Synthesis of peptide (product 17b)	64
Synthesis of peptide (product 17c)	65
Reaction type V	66
Synthesis of aldehyde (general scheme)	67
Synthesis of aldehydes	68
Biological activity (Isoxazolidine & isoxazolines)	69
Determination of MIC values	70-73
Biological activity (Spiro cycloadducts)	74
Determination of MIC values	75-77
SEM micrographs	78
References	79-80
IR spectra	81-85
¹H NMR spectra	86-92
¹³C NMR spectra	93-96
Mass spectra	97-101
Chapter III Results and Discussion	(102 – 137)
Synthesis of <i>N</i> -phenyl/methyl- α -amino nitron (1a & 1b)	103-104
General scheme of cycloaddition with alkene & alkynes	104-105
Endo/exo approach in cycloaddition reaction	106
Conformations of isoxazolidine & isoxazolines	107-110
Physical characteristics of cycloadducts including spiro	108-111
TS for spiro cycloadducts formation	112
General scheme of peptide synthesis	114
Physical characteristics of peptides	115
General scheme of aldehyde synthesis	116
Interpretation of Mass spectra	118-123
Interpretation of ¹ NMR spectra	123-126

Calculation of dihedral angles of cycloadducts	126
Interpretation of ^{13}C NMR spectra	128
Interpretation of other spectra	129
Discussion on biological study of new cycloadducts	131-134
References	135-137
<i>Chapter IV</i> <i>Scope and Objectives</i>	(138– 146)
Future scopes	139
Synthesis of 1,3-amino alcohols	140
Synthesis of peptidesv & dipeptides	140
General scheme of ketone synthesis	141
Green chemistry flow chart	142
Future perspectives on biological study	143 – 154
SEM micrographs	144
References	145-146
Bibliography (general)	147-157
Bibliography (books)	158
Index	159-163
Author index	164-165
