

ACKNOWLEDGEMENT

Within a fortnight after joining in Education Service, I approached him for guidance to prepare a UGC Minor Research Project. That Christmas vacation, both of us spent to shape that project. After a year back sanction was reached. But over the year we tried to isolate embryo in various ways. Finally 'Hot water method' was standardized and we were fascinated to look at those embryo preparations in light microscope. Then cold shock experiments were designed and again our results were conclusive. Then he had shared the idea of metabolic shift during refrigeration. Then also many mysteries of muga embryogenesis were gathered in Laboratory note books. He is my guide Dr. Nilay Ray. His intellect and vision are inevitable spirit behind decade long progression. I am lucky indeed to enjoy independence which I have enjoyed under his guidance. Thank you 'Sir' for everything through which I have progressed.

We spent many festive evening for the care during rearing. I was fascinated when they collect plants, care worms with such affection that reflects their dedication. They are no one but my laboratory colleagues, Dr Indrajit Biswas, Dr. Uddalok Bhattacharya and Dr. Supriya Biswas. Thank you 'Masters' for yours supports.

Dr. Abhijit Dutta, erstwhile Presidency College and Prof. R. Bhar, Jadavpur University extended their support to explore microscopic studies. Dr. Narayan Biswas and Dr S.N. Bagchi, Central Silk Board, provided their support as and when it was required.

I like to express my gratitude to all faculty members of Department of Zoology, University of North Bengal to provide this opportunity. I do acknowledge University Grants Commission for their financial support.

At last my 'Family', whatever nonsense I am doing always, they extend their sensible support for that. Thank you 'Family'.

Saminon Ghosal.
