

## ACKNOWLEDGMENT

This thesis, taking its tortuous course from conception to completion, would not have seen the light of the day without generous and unremitting support from my colleague and Supervisor, Shri Jeta Sankrityayana, Reader in Economics at the University of North Bengal. Many of the contributions he made to the development of the thesis came from our daily discussions, which gradually forced me into greater clarity of thought and inferences. I grew confident because of the depth of his knowledge on the subject and his meticulous scrutiny of everything I wrote, and came to rely more and more on his judgement as his immense analytical and technical abilities contributed to every stage of the research. Without his constant guidance, the thesis might have remained an unfulfilled dream, and my heartfelt and profound gratitude goes to him.

Professor Biplab Dasgupta had initiated my initial forays into this research area during my short tenure with the Calcutta Metropolitan Development Authority [CMDA], and remained a constant source of inspiration as my Co-Supervisor during the formulation of the present thesis. My deepest gratitude goes to my Professor who, inspite of many preoccupations both at the University of Calcutta and at the Indian Parliament, always gave me a patient hearing and invaluable suggestions.

The enthusiastic interest of my friends and colleagues both at the Department of Economics and outside it were a perpetual encouragement for my research. I am deeply grateful to all of them. I am indebted to Professor Manas Dasgupta, who retired recently as Professor of Economics from the University of North Bengal, and to my former colleague, Dr. Pinaki Chakraborti, presently Reader in Economics at the University of Burdwan, for facilitating my entry into this research area and for constantly encouraging me to forge ahead. Although Dr. Chakraborti, who was my first Supervisor, was unable to guide me through to the completion of the thesis because of logistic difficulties arising from his shift of station, his initial guidance has formed a base for the thesis.

Professor J.C. Sandesara of the Centre for Advanced Economic Studies at the University of Bombay and Professor Pabitra Giri of the Centre for Urban Economic Studies at University of Calcutta extended the resources and hospitality of their Centres to me during my respective tenures as Visting Fellow at these institutions. Direct discussion with them also helped me considerably in focusing the study. Professor Gopal Kadekodi, formerly of the Institute of Economic Growth at New Delhi, Professor Rabindranath Bhattacharyya of the University of Kalyani, and Professor Biswajit Chatterjee of the University of Jadavpur made penetrating comments on my first research papers on Indian railway freight operations, providing further stimuli to my research interests.

My study of international railway history - particularly of freight operations on the French National Railways [SNCF] - was made possible through a visitorship funded by the UGC and the Government of France. I duly thank Professor Jean-Luc Racine, Director of the Maison des Sciences de L'Homme at Paris, for extending the hospitality and resources of MSH to me, and to M. Halenbrenner, Member (Transportation) of the French Planning Commission, Professor Richard Darbera of the Laboratoire Techniques, Territoires et Societes (LATTS) at the Ecole Nationale des Ponts et Chaussees at Marne la Vallee, and Professor Emile Quinet at the Ecole Nationale des Ponts et Chaussees at Paris for many hours of interactive learning and discussion. Professor Quinet, an internationally acknowledged authority on the economics of infrastructure, generously opened his personal library in Paris to me, thus enabling me to acquire an enormous amount of relevant research material. Mme. Marie-Noëlle Polino of the Association Histoire des Chemin de Fer [AHICF] and M. Thomas Barran of the Direction du Fret [SNCF] at Paris, and officials at London Transport International in Britain assisted my study of French and international railway history unstintingly, while also freely sharing their knowledge of railway systems across the world and providing information that constitutes a very important part of the thesis.

I also gratefully acknowledge the cooperation and help received from the officials of various libraries all over India as well as abroad, without whose assistance the compilation of data and information pertaining to my research would have remained incomplete. I make particular mention of the University Libraries of the Universities of North Bengal and Bombay, the libraries of the Sardar Patel Institute, Ahmedabad, and the Indian Institute of Management, Calcutta, the Commercial Library at Calcutta and the Bibliotheque Nationale at Paris. Shri B.P.Sinha of the Ministry of Railways at Rail Bhawan, New Delhi, was of tremendous help in securing important Government of India reports and public documents, which would otherwise have been impossible to obtain.

I express special gratitude to the office staff at the Department of Economics and at the Registrar's Branch, especially to Shri Sanjib Sarkar and Smt.Gouri Sen, for their continuous probing into how far I had progressed with the thesis, which increased my determination to complete it. I also thank my student, Showkat Iqbal, for being there to help me at the critical stage when this dissertation was being printed.

At various times during the course of my research, I have been able to count on the understanding and personal support of my friends. I especially thank Dr.Maitreyee Choudhury, for standing by me on all occasions and for helping me to find resilience.

Finally, I am deeply indebted both to my parents and my parents-in-law, to whom I dedicate this thesis. Their love, support and constant encouragement saw me safely through the travails of research and no words of gratitude would be enough. Last but not the least, I express my heartfelt gratitude to my husband, Shri Ashim Mukherjee for his untiring support and patience during the endless hours of work that were devoted to the preparation of this thesis, which helped me to relax without encumbrances.

  
Sanchari Roy Mukherjee  
Reader in Economics  
North Bengal University
