

PREFACE

At the very outset, I express my profound sense of gratitude and indebtedness to my supervisor Dr. Shilpi Ghosh, Department of Biotechnology and Professor B.N. Chakraborty, Immuno-Phytopathology Laboratory, Department Of Botany, University of North Bengal for their constant guidance throughout my research work. Without their encouragement and tireless mentorship, I would not have completed my thesis. Professor Usha Chakraborty of the Department of Botany needs special mention for her supportive attitude whenever I was in need of her help. I would like to thank her for supporting and guiding me.

Execution of the research work was done under the dynamic leadership of Professor B.N. Chakraborty and Professor Usha Chakraborty during the course of the DBT-Twinning project in Immuno-Phytopathology Laboratory. I am indebted to Sir and Madam for allowing me to use all the facilities of Immuno-Phytopathology Laboratory as well as instruments in Special Assistance Programme of Department of Botany for fulfilling my research work.

Thanks to the former and present Heads of both the departments, for all administrative support during the whole time of the course. Without mentioning my humble acknowledgments to all teachers of the Department of Biotechnology as well as Department of Botany, NBU, my thankfulness is incomplete. I trust all my teachers would accept my respectful offer of gratitude. I also wish to extend my thanks to all the non-teaching staffs of both the Departments.

I am also indebted to the Honourable Vice Chancellors, both former and present of the University of North Bengal for letting me to carry out my work in this University. My sincere thanks are also due to The Registrar, NBU for his positive response during my registration and submission of Ph.D. Thesis.

Without the financial support from the Department of Biotechnology, New Delhi, my work would start and end in nothingness and hence I sincerely thank DBT, for providing me resource to study during my DBT-Twinning Project.

During the years of my research work, I had to take help from various other esteemed institutions of India namely The Bose Institute, Kolkata for SEM photography;

Chromous Biotech, Bangalore and SciGenom Labs Pvt Ltd., Kerala for sequencing of fungal culture and the AIIMS, New Delhi for TEM studies. I am indebted to all concerned in these laboratories for their help.

I want to express my warm personal gratitude to all my friends of the Immuno-Phytopathology Lab especially Dr. Pannalal Dey, Dr. Kiran Sunar, Dr. Arka Pratim Chakraborty, Dr. Utanka De, Dr. Sanjita Allay, Mr. Somnath Roy, Ms. Sweata Khati, Mr. Shibu Barman, and Ms. Priyanka Bhattacharjee and the other research scholars of Plant Biochemistry lab for all their ideas that we argued about and constant support and assistance in completion of this thesis. Thanks indeed. I also would like to thank the research scholars of Department of Biotechnology for their constant support. I wish to thank fieldmen Sambhu Banik, Nimai Roy and Dolly Mahato for maintaining plants in nursery and experimental field as well as proper maintenance of experimental animal for raising polyclonal antibodies.

Finally, I would like to thank my parents for their constant encouragement during my studies. I express my sincere thanks to my husband and in-laws for constantly supporting me throughout my research work.

Department of Biotechnology
University of North Bengal
