

LIST OF FIGURES

CHAPTER-I

Figure no	Title	Page no
Figure I.1.	General Palladium catalyzed catalytic cycle of cross-coupling reaction	15
Figure I.2.	Generic advantages of Buchwald-type dialkylbiarylphosphine ligands	30
Figure I.3.	General structural features of IAd (124)	32
Figure I.4.	The σ -withdrawing and π -donating effects of the nitrogen hetero atoms help to stabilize the singlet carbene structure of imidazol-2-ylidenes in ground-state electronic structure.	33
Figure I.5.	Structures of some of the most commonly applied classes of NHCs	34
Figure I.6.	Applications of NHCs coordinated to transition metals	35
Figure I.7.	Comparison of Grubb's first- and second-generation catalysts	37
Figure I.8.	Structures of NHC ligand 144 and Pd-NHC pre-catalyst 145 used in preparation of <i>tetra-ortho</i> -substituted biaryls	40
Figure I.9.	Structure of [Pd(NapCyoct ₂)(cin)Cl], 146	40
Figure I.10.	Structure of [Pd(IPr*)(cin)Cl], 147	41
Figure I.11.	Structure of [Pd(IPr)(cin)Cl], 148	43
Figure I.12.	Structure of heteroleptic Pd(II) complex, 149	44
Figure I.13.	Sulfonate-NHC-Pd(II) complexes for Mizoroki-Heck reaction	45
Figure I.14.	N-carbamoyl-substituted NHC-Pd(II) complex for Sonogashira cross-coupling reaction	46
Figure I.15.	NHC-Pd(II) complex for amine-free Sonogashira cross-coupling reaction	47
Figure I.16.	Pd-NHC benzimidazolylidene complexes for the direct C(sp ²)-H arylation	48

Figure I.17.	Pd–NHC benzimidazolylidene complexes for the direct C(sp ²)–H arylation by Akkoc	49
Figure I.18.	[Pd(NHC)-Cl ₂] complex containing N-2-pyrimidine and N-2-hydroxyalkyl side chains	50
Figure I.19.	Dibenzofuryl functionalized Pd–PEPPSI-type catalyst	51
Figure I.20.	Bis(imino)acenaphthene Pd–NHC complex	52

CHAPTER-II

Figure II.1.	Representative examples of benzoxazole derivatives	60
Figure II.2.	Some representative examples of biaryl ketone, 2-quinolone and 4-quinolone units	60

CHAPTER-III

Figure III.1.	Selected Compounds of Biological Relevance Containing either Imidazopyridine Amine or Stilbene Unit	98
---------------	---	----

CHAPTER-IV

Figure IV.1.	Representative Scaffolds of Biological Relevance Containing either Imidazopyridine Amine, Phenyl acetic acid or Stilbene Unit	134
--------------	---	-----
