

TABLE OF CONTENTS

Topics	Page No.
Abstract	i-ii
Preface	iii
Acknowledgement	iv
Table of Contents	v-viii
List of Tables	ix
List of Figures and List of Schemes	x-xi
List of Appendices	xi
Chapter I: General Introduction	1-18
1. Introduction	1-1
2. Dose-Response Curve	1-2
2.1. Role of selected micronutrients	2-4
2.1.1. Role of Zinc	2-3
2.1.2. Role of Copper	3-3
2.1.3. Role of Vanadium	3-4
2.2. Micronutrient deficiency : a global problem	5-6
2.2.1. Increase of salt concentration in soil	5-5
2.2.2. Chance of contamination	5-5
2.2.3. Toxicity for plants	5-5
2.2.4. Leaching	6-6
2.2.5. Change of soil pH and free electron activity	6-6
2.3. Solving micronutrient deficiency : A modern approach	6-7
2.4. Tusk specific polydentate ligands : an alternative	7-14
2.4.1. Schiff base chemistry	7-8
2.4.2. Schiff base transition metal complexes	9-10
2.4.3. Applications of Schiff base transition metal complexes	11-14
2.4.3.1. As catalysts	11-12
2.4.3.2. As electroluminescent materials	12-12
2.4.3.3. Biological activities	12-13
2.4.3.4. Antimicrobial activities	13-13
2.4.3.5. Antifungal activities	13-14
2.4.3.6. Antiviral activities and synergistic action	14-14
2.4.3.7. Other therapeutic activities	14-14
2.5. Objective of the research work and method of investigations	14-15
References	15-18

Chapter II: Experimental Section	19-29
2.1. Source and purification of the chemicals used	19-20
2.2. Experimental methods	20-28
2.2.1. Different physico-chemical methods used	20-23
a) Elemental analysis	20-20
b) Melting point	20-21
c) Infrared spectra	21-21
d) Electronic spectra	21-22
e) Conductivity	22-22
f) Mass measurements	23-23
2.2.2. Synthesis of the ligands and their transition metal complexes	23-25
a) Synthesis of N ₂ O ₂ donor ligands and their Zn(II) complexes	23-24
b) Synthesis of azo-functionalized Schiff base ligands and their Cu(II) complexes	24-24
c) Synthesis of a tetradentate N ₂ O ₂ donor Schiff base ligand and its vanadyl complex	24-25
2.2.3. Various morphological and biochemical parameters used	25-28
a) Germination Index (GI)	25-25
b) Germination percentage (GP)	25-25
c) Seedling vigour index (SVI)	25-25
d) Coefficient of velocity of germination (CVG)	25-26
e) Extraction and estimation of total soluble proteins	26-26
f) Extraction and estimation of chlorophyll	26-26
g) Extraction and estimation of carotenoids	26-26
h) Extraction and estimation of antioxidative enzymes	26-26
i) Extraction and estimation of total sugar	26-26
j) Extraction and estimation of Leaf Zinc content	27-27
k) Growth parameters	27-27
l) Copper tolerance index	27-27
m) Electrolyte leakage	27-27
n) Determination of free amino acids and proline	27-27
o) Lipid peroxidation	27-27
p) H ₂ O ₂ content	28-28
q) Cell viability	28-28
r) Leaf disc bioassay	28-28

References	28-29
Chapter III: Morphological and biochemical effects of some N₂O₂ donor schiff bases and their Zn²⁺ complexes on <i>Carica papaya</i> L. and <i>Cicer arietinum</i> L.	30-47
3.1. Introduction	30-31
3.2. Materials and methods	31-32
3.2.1. Synthesis of ligands and complexes	31-31
3.2.2. Treatment of papaya seeds	31-32
3.2.3. Treatment of chickpea seeds	32-32
3.3. Results and discussions	32-45
3.3.1. Characterisation of ligands and complexes	32-34
3.3.2. Effects of the ligands and their complexes on papaya seeds	34-39
3.3.3. Effects of the ligands and their complexes on papaya seeds	39-45
3.4. Conclusion	46-46
References	46-47
Chapter IV: Morphological and Biochemical Effects of two azo-functionalized Schiff base Cu(II) complexes on Rice plants*	48-62
4.1. Introduction	48-48
4.2. Materials and methods	49-50
4.2.1. Synthesis of the ligands and their Cu(II) complexes	49-49
4.2.2. Treatment with the ligands and their Cu(II) complexes	49-50
4.3. Results and Discussion	50-61
4.3.1. Characterization of the ligands and their Cu(II) complexes	50-51
4.3.2. Application of the ligands and their Cu(II) complexes to the plant material	51-61
4.3.2.1. Growth and tolerance to the copper complexes	51-54
4.3.2.2. Membrane damage and ion leakage	54-57
4.3.2.3. Total free amino acids and proline	57-59
4.3.2.4. Photosynthetic pigments	59-61
4.4. Conclusion	61-61
References	61-62

Chapter V: Efficacy of a multi-dentate Schiff base and its vanadyl complex on various morphological and biochemical parameters of <i>Vigna radiata L.</i>	63-75
<hr/>	
5.1. Introduction	63-64
5.2. Materials and methods	64-65
5.2.1. Synthesis of the ligand and its vanadyl complex	64-65
5.2.2. Maintenance of the plants	64-65
5.3. Results and Discussion	66-73
5.3.1. Characterization of the ligand and its vanadyl complex	66-66
5.3.2. Effects of the ligand and its vanadyl complex on vigna	67-73
5.3.2.1. Leaf disc bioassay	67-68
5.3.2.2. Fresh biomass, dry biomass and RWC	68-70
5.3.2.3. Oxidative stress	70-72
5.3.2.4. Total free amino acid and total soluble sugar	72-73
5.4. Conclusion	74-74
References	74-75
<hr/>	
Chapter VII: Concluding remarks	76-78
<hr/>	
APPENDIX	79-80
BIBLIOGRAPHY	81-86
INDEX	87-89
