Plagiarism Analysis Result	iii
Acknowledgement	iv-v
Abstract	vi-ix
List of Tables	x-xiv
List of Figures	xv-xxxi
List of Appendices	xxxii
1. Introduction	**1-8**
2. Literature Review	**9-65**
2.1. Silk and its aspects	9
2.1.1. Vanya (wild) silk	11
2.1.2. Mulberry silk	14
2.1.3. Silk in West Bengal	23
2.1.4. Problems associated with mulberry silk production	25
2.2. Nanosilver with special reference to green technology	26
2.2.1. Nano Technology	27
2.2.2. Nanoparticles	28
2.2.3. Types of Nanoparticles	28
2.2.4. Silver and its nano form	28
2.2.5. Methods for nanoparticle synthesis	29
2.2.5.1. Physical methods of nanoparticles synthesis	30
2.2.5.2. Chemical methods of nanoparticles synthesis	31
2.2.5.3. Biological synthesis of nanoparticles	32
2.2.5.3.1. Synthesis of silver nanoparticle by algal extract	32
2.2.5.3.2. Synthesis of silver nanoparticle by fungal extract	34
2.2.5.3.3. Synthesis of silver nanoparticle by bacterial extract	34
2.2.5.3.4. Synthesis of silver nanoparticle by plants extract	44
2.2.6. Characterization and validation of green synthesized silver nanoparticles	44
2.2.6.1. UV-Visible spectroscopy	44
2.2.6.2. Fourier-transform infrared spectroscopy (FT-IR)	45
2.2.6.3. X-ray diffraction (XRD)	52
2.2.6.4. Dynamic light scattering (DLS)	52
2.2.6.5. Scanning electron microscopy (SEM) and energy dispersive X-ray (EDX)	52
2.2.6.6. Transmission electron microscopy (TEM)	53
2.2.7. Factors affecting nanoparticles formation	53
2.2.7.1. Effect of temperature on silver nanoparticle synthesis	53
2.2.7.2. Effect of pH on silver nanoparticle synthesis	54
2.2.7.3. Effect of concentration on silver nanoparticle synthesis	54
2.2.7.4. Effect of reaction time on silver nanoparticle synthesis	54
2.2.8. Bioactive potentiality assessment of green synthesized silver nanoparticles	55

2.2.8.1. Antioxidant activity of green synthesized silver nanoparticles 55
2.2.8.2. Efficiency of green synthesized silver nanoparticles against microorganisms 55
2.2.9. Application of green synthesized silver nanoparticles 56
2.2.9.1. Application of silver nanoparticles in enhancing post harvest shelf life of horticultural crops 56
2.2.9.2. Application of silver nanoparticles in food packaged 57
2.2.9.3. Application of silver nanoparticles in medicine industry 58
2.2.9.4. Application of silver nanoparticles in cosmetics industry 58
2.3. Biochemical, enzymological and histological perspective of post-harvest preservation 59
2.4. Role of nanosilver and silver salts in senescence alteration and oxidative stress mitigation 61
2.5. Proteomic analysis of mulberry leaves and silkworm larvae with special reference to gel electrophoresis 62
2.6. Next-generation sequencing with special reference mulberry and cellular senescence 63
3. Study Area 66-73
4. Material & Methods 74-114
4.1. Collection of mulberry leaves 74
4.2. Preparation of voucher specimens 74
4.3. Screening of mulberry cultivar for experimental setup 74
4.3.1. Study of foliar macro-morphology 75
4.3.2. Study of foliar micro-morphology 75
4.3.2.1. Study of Venation pattern 75
4.3.2.2. Study of Indumentum 75
4.3.2.3. Detection and study of stomatal parameters 75
4.3.3. Statistical data analysis of macro- and micro-morphological data 76
4.4. Experimental setup leading to post harvest mulberry leaf preservation 77
4.5. Screening of preservative solutions 77
4.6. Phytosynthesis of silver nanoparticles 79
4.6.1. Preparation of plant extract 79
4.6.2. Preparation of silver nitrate (AgNO3) solution 79
4.6.3. Biosynthesis of nanosilver 79
4.7. Validation and characterization of phytosynthesized silver nanoparticles 80
4.7.1. Colour transformation 80
4.7.2. Spectrophotometric analysis 80
4.7.3. Fourier transformed infrared spectroscopy (FT-IR) 80
4.7.4. Scanning electron microscopy (SEM) 80
4.7.5. Field emission scanning electron microscope (FESEM) 82
4.7.6. Energy dispersive X-ray spectroscopy (EDX) 82
4.7.7. Transmission electron microscopy (TEM) 82
4.7.8. High resolution transmission electron microscopy (HR-TEM) 82
4.7.9. X-ray diffraction analysis (XRD) 83
4.7.10. Dynamic light scattering (DLS) 83

4.7.11. Zeta potential 84
4.8. Time kinetics of nanosilver formation 84
4.9. Bioactivity assessment of phytosynthesized silver nanoparticles 84
4.9.1. Antioxidant activity assessment 84
4.9.1.1.DPPH (2,2-diphenyl-1-picrylhydrazyl) radical scavenging assay 84
4.9.1.2. ABTS+ (2,2-azino-bis 3-ethylbenzthiazoline-6-sulphonic acid) scavenging assay 85
4.9.1.3. Nitric oxide (NO) scavenging assay 85
4.9.1.4. Superoxide radical (SO) scavenging assay 85
4.9.1.5. Metal chelating activity (MC) 85
4.9.2. Antimicrobial activity assessment 86
4.10. Process variation of nanosilver formation 86
4.10.1. Determination of effective concentration of silver nitrate for nanosilver formation 87
4.10.2. Determination of appropriate volume of plant extract for nanosilver formation 87
4.10.3. Determination of appropriate ratio of plant extract to silver nitrate for nanosilver formation 87
4.10.4. Determination of suitable genotype of mulberry for nanosilver formation 87
4.10.5.Determination of impact of light on nanosilver synthesis 88
4.10.6. Determination of impact of pH on nanosilver synthesis 88
4.10.7. Determination of impact of temperature on nanosilver synthesis 88
4.11.Stability assessment of phytosynthesized silver nanoparticles 88
4.12. Bio-potentiality assessment of silver nanoparticles prepared by process variation 89
4.13. Screening of least effective concentration of silver nanoparticle 89
4.14. Evaluation of preservative potentiality of least effective concentration of phytosynthesized silver nanoparticles 89
4.15. Quantitative chemical profiling of mulberry leaves at post preservation stage 90
4.15.1. Quantitative profiling of primary metabolite content 90
4.15.1.1. Determination of total chlorophyll content 90
4.15.1.2. Determination of total soluble protein content 90
4.15.1.3. Determination of free proline content 91
4.15.1.4. Determination of total soluble sugar and reducing sugar content 91
4.15.2. Quantitative profiling of reactive oxygen species and lipid peroxidation 91
4.15.2.1. Determination of hydrogen peroxide (H_2O_2) content 91
4.15.2.2. Determination of superoxide ($O_2^{\bullet-}$) content 91
4.15.2.3. Determination of lipid peroxidation 92
4.15.3. Quantitative profiling of free radical scavenging activities and metal chelating activity 92
4.15.4. Determination of enzymatic antioxidant activity 93
4.15.4.1. Detection of superoxide dismutase (SOD) activity 93
4.15.4.2. Detection of catalase (CAT) activity 93
4.15.4.3. Detection of glutathione disulfide reductase (GSR) activity 94

4.15.4.4. Detection of glutathione peroxidase (GPOX) activity 94
4.15.4.5. Detection of glutathione S-transferase (GST) activity 94
4.15.4.6. Detection of ascorbate peroxidase (APX) activity 95
4.15.5. Determination of non-enzymatic antioxidant activity 95
4.15.5.1. Determination of carotenoids content 95
4.15.5.2. Determination of ascorbic acid content 95
4.15.5.3. Determination of total glutathione content 95
4.15.6. Estimation of polyphenol content 96
4.15.6.1. Detection of total phenol content 96
4.15.6.2. Detection of orthodihydric phenol content 96
4.15.6.3. Detection of flavonoid content 96
4.15.7. Data analysis 96
4.16. Investigation of protein profile of preserved mulberry leaves 97
4.16.1. Sodium dodecyl (lauryl) sulphate (SDS) Gel Electrophoresis of leaf protein 97
4.16.1.1. Extraction of leaf protein 97
4.16.1.2. Reagents and detection technique of Sodium dodecyl sulphate – polyacrylamide gel electrophoresis (SDS PAGE) 97
4.16.1.2.1. Preparation of acrylamide and bisacrylamide solution 97
4.16.1.2.2. Preparation of sodium dodecyl sulphate (SDS) solution 98
4.16.1.2.3. Preparation of Tris-HCl (pH 8.8) buffer for resolving gel 98
4.16.1.2.4. Preparation of Tris-HCl (pH 6.8) buffer for stacking gel 98
4.16.1.2.5. Preparation of sample loading buffer 98
4.16.1.2.6. Preparation of electrophoresis running buffer (pH 8.3) 98
4.16.1.2.7. Preparation of ammonium persulfate (APS) solution 99
4.16.1.2.8. Sample preparation for SDS gel electrophoresis 99
4.16.1.2.9. Gel formulations 99
4.16.1.2.10. Electrophoresis set up 99
4.16.1.2.11. Post electrophoresis gel staining 99
4.16.1.2.12. Destaining of stained gel 99
4.16.1.2.13. Gel scanning 100
4.16.2. Orbitrap high resolution liquid chromatography mass spectrometry (OHR-LCMS) 100
4.16.2.1. In-gel digestion of differentially expressed SDS gel band 100
4.16.2.2. Zip Tip C18 for MS Analysis 101
4.16.2.3. Column Details 101
4.16.2.3.1. Analytical Column 101
4.16.2.3.2. Mobile Phase 101
4.16.2.3.3. Run time of sample 101
4.16.2.3.4. Data analysis software 102
4.16.2.3.5. Databases used 102
4.16.2.4. Protein - protein networking analysis 102
4.16.3. Native PAGE detecting leaf isozymes 102
4.16.3.1. Preparation of plant extract for on-gel assay 102
4.16.3.2.Electrophoresis set up 102

4.16.3.3. Staining of isozymes 103
4.16.3.3.1. NADPH Oxidase (NOX) 103
4.16.3.3.2. Superoxide dismutase (SOD) 103
4.16.3.3.3. Catalase (CAT) 103
4.16.3.3.4. Peroxidase (POD) 104
4.17. Determination of microbial load in preservative solution 104
4.18. Evaluation of preservative potentiality of phytosynthesized silver nanoparticles against five studied genotypes 104
4.19. Histochemical detection of preserved tissues 104
4.19.1. Light microscopic detection of xylem blockage 104
4.19.1.1. Preparation of Bradford reagent 104
4.19.1.2. Preparation of Azure B 105
4.19.1.3. Preparation of Phloroglucinol-HCl 105
4.19.1.4. Preparation of Sudan IV 105
4.19.2. Scanning electron microscopic detection of xylem blockage 105
4.19.3. Histochemical detection of oxidative stress 106
4.19.3.1. Detection of hydrogen peroxide localization 106
4.19.3.2. Detection of plasma membrane integrity 106
4.19.4. Statistical analysis of anatomical data 106
4.20. Transcriptome analysis of preserved mulberry leaves using Illumina platform 107
4.20.1.RNA extraction and high-throughput Illumina sequencing 107
4.20.2. Preprocessing of RNA-Seq data set 107
4.20.3. Prediction of simple sequence repeats (SSRs) 107
4.20.4. de novo transcriptome profile and differential gene expression analysis 108
4.20.5. Functional annotation of differentially expressed genes 108
4.20.6. Functional enrichment analysis of differentially expressed genes 108
4.21. Validation of differentially expressed genes by quantitative real-time PCR 109
4.22. Feeding experiment and rearing data collection 110
4.22.1. Collection of silk worm larvae 110
4.22.2. Experimental setup for rearing 110
4.22.3. Collection of cocoon parameters 110
4.22.4. Post cocoon analysis (cocoon quality assessment) 111
4.22.5. Data analysis of rearing parameters 111
4.23. Investigation of protein profile of silkworm larvae fed with preserved mulberry leaves 112
4.23.1. Sodium dodecyl (lauryl) sulphate (SDS) Gel Electrophoresis of larval protein 112
4.23.1.1. Extraction of larval protein 112
4.23.1.2. Reagents and detection technique of Sodium dodecyl sulphate polyacrylamide gel electrophoresis (SDS PAGE) 112
4.23.2. Orbitrap high resolution liquid chromatography mass spectrometry (OHR-LCMS) of differentially expressed larval proteins 112
4.23.3. Native PAGE detecting larval isozymes 112
5. Results 115-491
5.1. Study of Foliar macro- and micro-morphology 115
5.1.1. Foliar macro-morphology 115
5.1.2. Morphology of stomata 117

5.1.3. Study of venation morphology 122
5.1.3.1. Major venation pattern 122
5.1.3.2. Minor venation pattern 122
5.1.3.3. Study of areolation 126
5.1.4. Morphology of indumentums 126
5.1.5. Statistical analysis of foliar macro and micro morphology 133
5.2. Screening of effective preservative solution 136
5.3. Characteristic transformation of silver nitrate solution 145
5.4. Phytosynthesis of silver nanoparticles and its characterization 145
5.4.1. UV - Visible spectral analysis 145
5.4.2. Fourier transformed infrared spectroscopic (FTIR) analysis 145
5.4.3. Scanning electron microscopy (SEM) and Field emission scanning electron microscope (FESEM) 149
5.4.4. Energy dispersive x-ray spectroscopy (EDX) 149
5.4.5. Transmission electron microscopy (TEM) and High resolution transmission electron microscopy (HR-TEM) 149
5.4.6. X-ray diffraction analysis (XRD) 154
5.4.7. Dynamic light scattering (DLS) and Zeta potential analysis 154
5.5. Time kinetics of nanosilver formation 156
5.6. Bioactivity assessment of phytosynthesized silver nanoparticles 159
5.6.1. Antioxidant property assessment 159
5.6.2. Antimicrobial property assessment 163
5.7. Process variation of silver nanoparticle formation 163
5.7.1. Effect of silver nitrate concentration variation on phytosynthesis of silver nanoparticle 163
5.7.2. Effect of variation of biogenic extract on phytosynthesis of silver nanoparticle 169
5.7.3. Effect of variation of plant extract to silver nitrate ratio on phytosynthesis of silver nanoparticle 170
5.7.4. Determination of suitable genotype of mulberry for phytosynthesis of silver nanoparticle 179
5.7.5. Effect of light intensity on phytosynthesis of silver nanoparticle 179
5.7.6. Effect of pH variation of leaf extract on phytosynthesis of silver nanoparticle 182
5.7.7. Effect of temperature variation on phytosynthesis of silver nanoparticle 191
5.8. Assessment of long term stability of phytosynthesized silver nanoparticles 195
5.9. Bio-potentiality assessment of prepared nanosilver solution under different process variation 202
5.10. Determination of least effective preservative concentration of screened silver nanoparticle 209
5.11. Assessment of preservative potentiality of least effective concentration of phytosynthesized silver nanoparticles 209
5.11.1. Assessment of physical condition of preserved mulberry leaves 209
5.11.2. Quantitative chemical profiling of mulberry leaves at post preservation stage 213
5.11.2.1. Changes in primary metabolites and proline content 213
5.11.2.2. Changes in reactive oxygen species and MDA content 213
5.11.2.3. Changes in free radical scavenging activities, and metal 219

chelating activity
5.11.2.4. Changes in enzymatic antioxidant activities 219
5.11.2.5. Changes in non-enzymatic antioxidant activities 224
5.11.2.6. Changes in polyphenol contents 224
5.12. Investigation of protein profile of preserved mulberry leaves through gel electrophoresis 229
5.13. Analysis of differentially expressed SDS protein band of mulberry leaves through orbitrap high resolution liquid chromatography mass spectrometry (OHR-LCMS) 238
5.14. Isozyme profiling of preserved mulberry leaves 246
5.15. Evaluation of microbial count in preservative solutions used for mulberry leaf preservation 252
5.16. Determination of preservative aspect of different genotype of mulberry leaves preserved in nanosilver, silver nitrate and distilled water 254
5.17. Anatomical organization of petiole of mulberry leaf 260
5.18. Histochemical study of transverse section of mulberry leaf petioles at post preservation stage 260
5.18.1. Light microscopic detection of xylem blockage 260
5.18.1.1. Staining with Bradford Reagent 261
5.18.1.2. Staining with Azure B 261
5.18.1.3. Staining with Phloroglucinol-HCl 267
5.18.1.4. Staining with Sudan IV 267
5.18.2. Scanning Electron Micrograph detection of xylem blockage 270
5.18.3. Histochemical stress assessment of transverse section of petioles at post preservation stage 273
5.18.3.1. Hydrogen peroxide localization 273
5.18.3.2. Plasma membrane integrity 273
5.18.4. Statistical analysis of observed xylem blockage pattern 273
5.19. Transcriptome analysis of preserved mulberry leaves using Illumina platform 280
5.19.1. Illumina De novo paired end transcriptome assembly 280
5.19.2. Annotation of unigenes 282
5.19.3. SSR prediction 283
5.19.4. Differential Expression Analysis (DEG) 294
5.19.5. Functional annotation of differentially expressed up-regulated and down-regulated genes with respect to Arabidopsis database 294
5.19.6. Functional classification and identification of differentially expressed up-regulated and down-regulated genes related to postharvest shelf life extension using STRING and Cytoscape 359
5.19.7. BiNGO and KEGG based functional categorization of differentially expressed transcripts 423
5.20. Validation of differentially expressed genes by quantitative real-time PCR 424
5.21. Analysis of feeding performance of silkworm larvae on supplementing with preserved mulberry leaves 461
5.21.1. Rearing practice of bi-voltine silkworm larvae 461
5.21.2. Rearing practice of multi-voltine silkworm larvae 464
5.22. Post cocoon analysis 470
5.23. Investigation of protein profile of internal organs of silkworm larvae after feeding with preserved mulberry leaves through gel 470

electrophoresis
5.24. Analysis of differentially expressed SDS protein band of silkworm larvae supplemented with nanosilver preserved leaves through orbitrap high resolution liquid chromatography mass spectrometry (OHR-LCMS) 481
5.25. Isozyme analysis of silk gland proteins 481
6. Discussion 492-546
6.1. Screening of mulberry cultivars 493
6.2. Selection of suitable preservative solution for post-harvest shelf life extension 496
6.3. Phytosynthesis and characterization of silver nanoparticles 498
6.4. Bioactivity assessment of phytosynthesized silver nanoparticles 501
6.5. Time Kinetics, Process variation, stability and bioactivity assessment of phytosynthesized silver nanoparticles 503
6.6. Determination of least effective concentration of screened nanosilver solution 511
6.7. Assessment of preservative potential of phytosynthesized silver nanoparticles at least effective concentration 512
6.8. Protein and isozyme profiling of preserved mulberry leaves through gel electrophoresis and prediction of differential expression through OHR-LCMS analysis 518
6.9. Evaluation of preservative potential of preservative solutions by assessing microbial count 523
6.10. Determination of preservative aspect of nanosilver solution against different cultivars of mulberry 523
6.11. Histochemical detection of stress and xylem blockage 524
6.12. Transcriptome profiling of preserved mulberry leaves using Illumina platform 530
6.13. Performance assessment of silkworm larvae on supplementing with preserved mulberry leaves in terms of feeding, rearing and protein profiling 540
7. Conclusion 547-548
8. Summary 549-552
9. Bibliography 553-654
10.A. Appendix-1: List of Chemicals 655-656
10.B. Appendix-2: Abbreviations & Symbols 657-659
10.C. Appendix-3: Index 660-662
10.D. Appendix-4: List of Publications 663
10.E. Appendix-5: Reprints 664
