

ACKNOWLEDGEMENTS

I would like to express my gratitude to my supervisor, M.Sen who has motivated me to work in this area and guided me very patiently throughout my University days. I wish to thank D.B.West of Illinois University, USA for his suggestions on our problems from time to time. His comments practically induced me to look farther into my problems than I was actually prepared to. I must remember with gratitude the constant inspiration given by A.B.Roy of Jadavpur University. I take this opportunity to acknowledge the debt that I owe to both of them for giving me permissions to use the contributions of our joint papers in this dissertation.

I am particularly indebted to P.K.Chowdhury of North Bengal University who had always been eager to help me in all my problems. My special thanks go to K.K.Roy, J.Sankrityan, K.K.Nandy and C.R.Nayak, all of North Bengal University, from whom I have been greatly benefitted.

I am also grateful to all my teachers for the regular encouragement that I received from them in my days of hardship. Lastly, I must acknowledge that the constant inspiration from my parents, relatives and friends, has made it possible for me to continue my studies.
