

Acknowledgments

With deepest gratitude and respect, I thank my supervisors Professor Kamal Kanti Nandi, Department of Mathematics, University of North Bengal and Dr. Arunava Bhadra, IRC, University of North Bengal for their untiring guidance and patience without which this work would not have seen the light of the day. Both of them have suffered deep personal bereavements (Dr. Bhadra's father passed away) during the course of the work. Even amidst these very unfortunate events, their supervision continued unabated. It is a personal lesson for me and perhaps also for the posterity.

It is a great pleasure to sincerely thank Mme. Guzel Kutdusova of Bashkir State University, Ufa, Russia for kindly going through some parts of the thesis in manuscript form. I am deeply indebted to Professor James C. Evans and Professor Paul M. Alsing, both of USA, for their partial collaboration.

I take this occasion to tender my obeisance to my parents Sri Ranjit Kumar Nayak and Smt. Bithika Nayak as well as my affection to my sister Smt. Monisha Mondal (née Nayak) and her husband Sri Bikash Mondal. All of them have provided unstinted encouragement and have shown a great degree of understanding.

I wish to thank my friends and colleagues in/around the University of North Bengal and elsewhere who have been immensely cooperative with several odd jobs and bucked me up in my occasional moments of depression. It is difficult to name them all but I am especially indebted to Chhoton in this regard.

I must not fail to acknowledge my appreciation for Smt. Suvarna Bhunia for encouragement.

Finally, I thank the authorities of the University of North Bengal for providing me the necessary permission to carry out the present work.

Place: North Bengal University

Date: 12.09.2005
