

Acknowledgment

The author of this thesis is delightful to express his gratitude and honour from the core of his heart to his supervisor Prof S. Karanjai of the Department of Mathematics, University of North Bengal, for his patient guidance, inspiration, encouragement, constant poking and exclusive supervision to prepare this thesis. At the same time he offers his thankful honour to Prof. B. Bhattachrjee, former Dean of Science Faculty, N.B.U. and Mr. S. Gope., Ex-Head of the Department of Physics, Arya Vidyapeeth College, Guwahati who had helped him directly or indirectly for reaching him under the umbrella of the knowledge of his supervisor.

He also likes to acknowledge the University Grant Commission (U.G.C.) for its financial support [vide letter No.F.5-41/TF/2003 (NRI/TF)/2225] to him to run the works of this thesis through the teacher fellowship under its faculty improvement scheme and also the University of North Bengal for allowing him to enjoy its infrastructural facilities for continuing his research work.

The author has no doubt that there are significant contribution of many persons, especially the teachers whom he met in different stages of his studies, to attain this stage. He pays due honour to all of them. He is grateful to his maternal uncle, Mr. R. G. Basak and his family, for encouraging him in continuing his research work and thankful to his friend, Mr. Debashis Banerjee, for helping him in editing the manuscript.

Finally, he pays his deep respect to his mother, Mrs. Bina Basak, in the absence of whose inspiration and blessings, this thesis may not have been possible. This task of acknowledgment will remain incomplete if he doesn't thank his wife Mrs. Soma D. Basak, whose constant inspiration prompted him to remain engaged in his research work in spite of the many constraints.
