	page	(ii)
1. Preface .		
2. Scope and Object of the Thesis .		
3. Synopsis of Chapters.		
4. General Introduction .		1
5. Chapter I - Exact solution of equation of transfer in semi-infinite, plane parallel , stellar atmosphere which scatters light in accordance with the threeterms phasefunctions by x Laplace transform using Wiener-Hopf technique.		32
6. Chapter II-		81
a) Introduction		82
b) Part - I . Exact solution of the equation of transfer in axially symmetric, plane parallel , scattering atmosphere which scatters light in accordance with phase function(Rayleigh phase matrix) ,with no incident radiation taking into consideration of constancy of net flux and polarization by Laplace transform using Wiener-Hopf technique.		93
c) Part II Exact solution of the equation of transfer appropriate to the problem of diffused reflection of parallel beam of radiation incident on a semi-infinite ,plane parallel atmosphere which scatters light in accordance with Rayleigh Phase matrix by Laplace transform using Wiener- Hopf technique.		135
7. Chapter III Exact solution of the equation of transfer		

appropriate to the problem of α Diffused reflection of a parallel beam of radiation incident on a semi-infinite , plane parallel planetary atmosphere which scatters light in accordance with three terms phase functions by Laplace transform using Wiener-Hopf technique.
