

CONTENTS

Preface i-ii
Chapter 1 : 1-32
General introduction and review of the previous works.	
1.1. Introduction	
1.2. Dielectric relaxation	
1.3. Relative dielectric permittivity	
1.4. Dielectric polarisation	
1.5. Clausius-Mossotti equation and Lorentz-Lorentz formula	
1.6. Debye equation under static electric field	
1.7. Onsager equation	
1.8. Debye's diffusive model of relaxation phenomena	
1.9. Kirkwood model of relaxation phenomena	
1.10. Fröhlich's model	
1.11. The barrier model of dielectric relaxation	
1.12. Bauer's theoretical model of dielectric relaxation	
1.13. Real and imaginary parts of relative permittivity	
1.14. Debye equation under high frequency electric field	
1.15. Murphy-Morgan conductivity relation	
1.16. Macroscopic and microscopic relaxation time	
1.17. Distribution of relaxation times	
1.18. Cole-Cole distribution	
1.19. Davidson-Cole distribution	
1.20. Havriliak-Negami distribution	
1.21. Kohlrausch-Williams-Watts distribution	
1.22. Distribution function of relaxation times	
1.23. Debye equation in solution	
1.24. Extrapolation technique and Guggenheim equation	
1.25. Eyring's rate theory in dielectric relaxation	
1.26. Brief review of relaxation phenomena	
Chapter 2 : 33-56
Scope and objective of the thesis work.	
2.1. Introduction	
2.2. Relaxation phenomena	
2.3. Debye equation in solution (SI unit)	
2.4. Static dipole moment μ_s from static experimental parameter X_{ij}	
2.5. High frequency complex conductivity σ_{ij}^*	
2.6. Relaxation time, dipole moment and conductivity of solution under high frequency electric field	
2.7. Thermodynamic energy parameters from Eyring's rate theory	
2.8. Multiple relaxation phenomena	
2.9. Double relaxation phenomena	

- 2.10. Double relaxation phenomena of a polar-nonpolar liquid mixture under single frequency measurement of relative permittivities
- 2.11. High frequency dielectric susceptibility
- 2.12. Double relaxation phenomena of polar-nonpolar liquid mixture from *hf* susceptibility measurement technique
- 2.13. Dipole moment from *hf* dielectric susceptibility
- 2.14. Substituent polar groups in a dipolar molecule under low and *hf* electric field
- 2.15. Chi-squares fitting technique
- 2.16. Material property of relaxation phenomena

Chapter 3 :

..... 57-73

Double relaxation times, dipole moments, energy parameters and molecular structures of some aprotic polar molecules from relaxation phenomena.

- 3.1. Introduction
- 3.2. Experimental set up
- 3.3. Theoretical formulations
- 3.4. Results and discussions
- 3.5. Conclusion

Chapter 4 :

..... 74-86

Dielectric relaxation phenomena of polysubstituted benzenes under high frequency electric field.

- 4.1. Introduction
- 4.2. Theoretical formulation
- 4.3. Results and discussions
- 4.4. Conclusion

Chapter 5 :

..... 87-98

Relaxation phenomena in methyl benzenes and ketones from ultra high frequency conductivity.

- 5.1. Introduction
- 5.2. High frequency conductivity technique to estimate τ and μ .
- 5.3. Results and discussions
- 5.4. Conclusion

Chapter 6 :

..... 99-111

Dielectric relaxation phenomena and high frequency conductivity of rigid polar liquids in different solvents.

- 6.1. Introduction
- 6.2. Theoretical formulations
- 6.3. Results and discussions
- 6.4. Conclusion

Chapter 7 : 112-132

Double relaxation phenomena of disubstituted benzenes and anilines in non-polar aprotic solvents under high frequency electric field.

- 7.1. Introduction
- 7.2. Formulations of c_1 and c_2 for τ_1 and τ_2
- 7.3. Distribution parameters γ and δ related to symmetric and characteristic relaxation times τ_s and τ_{cs}
- 7.4. Theoretical formulation for dipole moments μ_2 and μ_1
- 7.5. Dipole moments μ_2 and μ_1 from hf conductivity
- 7.6. Results and discussions
- 7.7. Conclusion

Chapter 8 : 133-149

Dielectric relaxation phenomena of rigid polar liquid molecules under giga hertz electric field.

- 8.1. Introduction
- 8.2. Theoretical formulations of c_1 and c_2 for τ_1 and τ_2
- 8.3. Distribution parameters γ and δ related to τ_s and τ_{cs}
- 8.4. Theoretical formulation for dipole moments μ_2 and μ_1
- 8.5. Results and discussions
- 8.6. Conclusion

Chapter 9 : 150-164

Relaxation phenomena of polar-nonpolar liquid mixtures under low and high frequency electric field.

- 9.1. Introduction
- 9.2. Theoretical formulation of X_{ij} to estimate static μ_s
- 9.3. Formulation of hf conductivity σ_{ij} to estimate τ_j and $hf \mu_j$
- 9.4. Results and discussions
- 9.5. Conclusion

Chapter 10 : 165-179

Material property of dipolar liquid in non-polar solvent through relaxation phenomena under high frequency electric field – a novel idea.

- 10.1. Introduction
- 10.2. Theoretical formulations for τ_1 and τ_2
- 10.3. Estimation of μ_1 and μ_2 from τ_1 and τ_2
- 10.4. Results and discussions

Summary and conclusion. 180-185
