PART I

APPROXIMATION MOLECULAR ORBITAL THEORIES: A LOCALIZED MO APPROACH

1.1	Introduction ..	1
1.2	The basic framework of MO method	3
1.3	Choice of Basis set in 'ab initio' LCAO MO SCF method ..	11
1.4	Approximate .. Semiempirical SCF MO methods ..	14
1.5	Localized molecular orbitals and the Bond orbital Approach	21
1.6	Criteria for 'best possible' bond orbital or fully localized MO description ..	23
1.7	Approximations for the evaluation of the Core, Fock and Density matrix elements ..	28
1.8	Charge distribution in the two centre MO approximation ..	55
1.9	Optimization of hybridisation	62
	REFERENCES ..	73

PART II

PARAMETRIZATION AND COMPUTATIONAL PROCEDURE

2.1	Parametrization ..	84
2.2	Computational procedure ..	94
	REFERENCES ..	105

PART IIIRESULTS AND DISCUSSIONS

3.1	Charge distribution in different molecules	..	106
3.2	S-characters in optimised hybrid orbitals	..	112
3.3	Dipole moments	..	123
3.4	Heat of atomization	..	139
3.5	Molecular geometry: Bond angles and S-characters	..	139
3.6	Conclusion	..	142
	REFERENCES	..	143
	APPENDIX	..	148
