STUDIES ON THE ACTION OF N-BROMOSUCCINIMIDE IN
DIMETHYL SULPHOXIDE ON 3-KETO AND 3-OXIMINO
TRITERPENOIDS AND THE TRANSFORMATIVE REACTIONS OF THEIR
BROMO DERIVATIVES

CHAPTER I

A short review of the action of N-bromo-
succinimide on triterpenoids and steroids 1

CHAPTER II

Studies on the action of N-bromo succinimide
in dimethyl sulfoxide on 3-keto triterpenoids 43
Studies on the action of NBS in DMSO on lupanone 43
Studies on the action of NBS in DMSO on methyl
dihydro betulonate .. 60
Discussion of the reaction mechanism 73

CHAPTER III

Studies on the action of N-bromosuccinimide 76
on oximes of 3-keto triterpenoids.

SECTION A

A. Studies on the action of NBS on lupanone
oxime .. 76
B. Studies on the action of NBS on oxime
derivative of dihydromethyl betulonate 79
Discussion of the reaction mechanism 86

	Page
<u>SECTION B</u>	
Studies on the action of NBS in dimethyl sulfoxide on the oxime derivative of friedelin	95
Conclusion ..	103
<u>CHAPTER IV</u>	
Reactions of 2-bromo (mono) bromo and dibromo) 3-keto triterpenoids ..	104
<u>SECTION A</u>	
Reaction with lithium aluminium hydride	
A. Reduction of 2 α -bromo methyl dihydrobetulonate with lithium aluminium hydride.	104
B. Reduction of 2 α -bromo lupanone with lithium aluminium hydride ..	114
C. Treatment of LAH on 2,2-dibromo methyl dihydrobetulonate ..	125
D. Lithium aluminium hydride reduction of 2,2-dibromolupanone ..	126
Discussion of the reaction mechanism	140
<u>SECTION B</u>	
Reaction with Sodium borohydride ..	142
A. Treatment of sodium borohydride on 2 α -bromo lupanone ..	142
B. Treatment of sodium borohydride on 2,2-dibromo lupanone ..	145
Discussion of the reaction mechanism	149

	Page
<u>SECTION C</u>	
Studies on the action of lithium-ethylenediamine on 2,2-dibromo and 2 α -bromo ketones.	150
A. Studies on the action of lithium-ethylene-	
diamine on 2,2-dibromo ketone ..	150
Treatment of lithium-ethylene diamine on	
2,2-dibromo lupanone ..	150
B. Studies on the action of lithium ethylene	
diamine on 2 α -bromo ketone	158
Treatment of Li-EDA on 2 α -bromo lupanone	158
Discussion of the reaction mechanism	161
<u>SECTION D</u>	
Wolff-Kishner reduction ..	163
A. Wolff-Kishner reduction of 2,2-dibromo-	
lupanone ..	163
B. Wolff-Kishner reduction of 2 α -bromo-	
lupanone ..	165
<u>SECTION E</u>	
Reaction with lithium bromide in N,N-dimethyl	
formamide ..	166
A. Dehydrobromination of 2,2-dibromo dihydro	
methyl betulonate with LiBr-DMF	166
B. Dehydrobromination of 2 α -bromo dihydro methyl	
betulonate with LiBr-DMF	174
C. Dehydrobromination of 2,2-dibromo lupanone	
with LiBr-DMF ..	181
D. Dehydrobromination of 2 α -bromo lupanone with	
LiBr-DMF ..	187

SECTION F

Reaction with N,N-dimethyl aniline	196
A. Treatment of N,N-dimethyl aniline on 2,2-dibromo lupanone ..	196
B. Treatment of N,N-dimethyl aniline on 2 α -bromo lupanone ..	198
Discussion of the reaction mechanism	198

SECTION G

Treatment with alcoholic potassium hydroxide	200
A. Hydrolysis of 2,2-dibromolupanone	200
B. Hydrolysis of 2,2-dibromo dihydro-methyl betulonate ..	205

SECTION H

Treatment with hydroxyl amine hydrochloride	
Preparation of 2,3-dioximinolupane and the subsequent cyclisation of the dioximino derivative to lupan [2,3-c]-1',2',5'-oxadiazole ..	206

CHAPTER V

Experimental ..	217
References ..	287

PART II

STUDIES ON THE ACTION OF SELENIUM DIOXIDE-HYDROGEN PEROXIDE IN TERTIARY BUTANOL ON TRITERPENOID HAVING ISO-PROPENYL GROUP.

CHAPTER ISECTION A

A short review of selective oxidation with selenium dioxide ..	294
--	-----

SECTION B

A short review on reactions of hydrogen peroxide in presence of selenium dioxide	316
--	-----

CHAPTER II

Studies on the action of selenium dioxide containing hydrogen peroxide and tertiary butanol on triterpenoids containing isopropenyl group ..	340
A. Oxidation of lupenyl acetate with selenium dioxide and hydrogen peroxide in tertiary butanol ..	340
B. Oxidation of acetyl methyl betulenate with selenium dioxide and hydrogen peroxide in tertiary butanol ..	361
Discussion of the reaction mechanism	373

CHAPTER III

Experimental ..	377
References ..	387

PART III

STUDIES ON THE ACTION OF HYDROGEN PEROXIDE IN PRESENCE OF p-TOLUENE SULPHONIC ACID ON TRITERPENOID ALLYLIC ALCOHOLS

CHAPTER I

A short review on the oxidative transformation reactions of the pentacyclic triterpenes with hydrogen peroxide in acid medium ..	392
--	-----

CHAPTER II

Oxidation of lup-1(2)-en-3-ol with hydrogen peroxide in tertiary butanol-methylene chloride containing p-toluene sulphonic acid 411

Treatment of lup-1(2)-en-3 α -ol with hydrogen peroxide in tertiary butanol-methylene chloride containing catalytic amount of p-toluene sulphonic acid .. 416

Discussion of the reaction mechanism 454

CHAPTER III

Experimental .. 460

References .. 470

PART IV

STUDIES ON THE ACTION OF LEAD TETRA ACETATE ON SATURATED TRITERPENE ACID WHERE THE TERTIARY CARBOXY GROUP IS SITUATED AT THE RING JUNCTURE

CHAPTER I

A short review on some oxidative transformative reactions of lead tetra acetate on triterpenoids 472

CHAPTER II

Studies on the action of lead-tetraacetate on saturated triterpene acid where the tertiary carboxy group is situated at the ring juncture (in this case at C-13). .. 500

Lead-tetra acetate oxidation of acetyl trichadenic acid .. 501
Discussion of the reaction mechanism .. 517

CHAPTER III

Experimental .. 521

References .. 528

PART VSTUDIES ON THE ACTION OF LITHIUM-ETHYLENE DIAMINE
ON DIKETO COMPOUNDSCHAPTER I

A short review of the reactions of dissolving
alkali metals in presence of bases. 535

CHAPTER II

Studies on the action of lithium-ethylene
diamine on diketo compounds .. 551
Introduction .. 551

SECTION A

Studies on the action of lithium ethylene
diamine on 1,2 -diketone: Preparation of
pyrazine derivative .. 552

A. Treatment of lithium-ethylene diamine
on benzil .. 552

B. Treatment of lithium-ethylene diamine on
2,3 diketo lupene .. 558
Treatment of lithium-ethylene diamine
on 2,3 diketo methyl dihydro betulonate 568
Conclusion .. 573

SECTION B

Studies on the action of lithium-ethylene
diamine on 1,3 and 1,4 diketone .. 576

A. Studies on 1,3 diketone 576
Treatment of lithium-ethylene diamine on
5,5-dimethyl cyclohexane-1,3-dione (dimedon) 576
Discussion of the reaction mechanism 584

	Page	
B. Studies on 1,4 diketone	585	
Treatment of lithium ethylene diamine on cholest-4(5)-en-3,6-dione ..	585	
Discussion of the reaction mechanism	589	
 <u>CHAPTER III</u>		
Experimental ..	591
