CHAPTER I	
Introduction	
1.1 The Context	1
1.2 Importance	5
1.3 Hypotheses and objectives	6
1.4 Approach	8
1.5 Design of the thesis	9
CHAPTER II	
Review of Literature	
2.1 Land-use/land cover change	12
2.2 Hydrological studies on land-use basis	16
2.3 Ecological studies in forests/agriculture/agroforestry	18
2.4 Carbon dynamics	21
2.5 IGBP initiatives on land-use/cover change and carbon challenge	26
CHAPTER III	
The Study Area, Climate and Site Characteristics	
3.1 The Sikkim Himalaya	31
3.2 The Mamlay Watershed	33
3.2.1 Topography	33
3.2.2 Geology	34
3.3 Climate	36
3.3.1 Rainfall	36
3.3.2 Temperature	36
3.3.3 Evaporation	37
3.3.4 Relative Humidity	37
3.3.5 Photosynthetically active radiation	37
3.4 Site characteristics	38
3.4.1 Bulk Density	39
3.4.2 Soil nutrient status	39
3.4.2.1 Organic carbon	40
3.4.2.2 Total nitrogen	40
3.4.2.3 Total phosphorus	40
CHAPTER IV	
Land-use/Land-cover Dynamics, Biomass Status and Community Dependence	
4.1 Introduction	49
4.2 Materials and methods	51
4.2.1 Land-use/cover	51
4.2.2 Biomass, productivity and litter production	53
4.2.3 Fuelwood, fodder and timber	54

4.3 Results	56
4.3.1 Land-use pattern	56
4.3.1.1 Forests	57
4.3.1.2 Agroforestry systems	57
4.3.1.3 Agricultural land	58
4.3.1.4 Wastelands	59
4.3.2 Land-use/cover change	59
4.3.3 Biomass, productivity and litter production	60
4.3.4 Fuelwood, fodder and timber utilization	61
4.4 Discussion	62
CHAPTER V	
Hydrological Analyses	
5.1 Introduction	78
5.2 Materials and methods	80
5.2.1 Stream discharge and sediment concentration	80
5.2.2 Overland flow and soil loss	81
5.2.3 Precipitation partitioning pathways	82
5.2.4 Statistical analysis	83
5.3 Results	83
5.3.1 Stream discharge and carbon loss	83
5.3.2 Sediment concentration	85
5.3.3 Precipitation and overland flow	85
5.3.4 Soil erosion and carbon loss	86
5.3.5 Precipitation pathways and carbon flow	87
5.4 Discussion	88
CHAPTER VI	
Carbon Budget	
6.1 Introduction	105
6.2 Materials and methods	107
6.2.1 Plant carbon analysis	107
6.2.2 Sample collection and processing	108
6.2.2.1 Soil sampling	108
6.2.2.2 Soil carbon analysis	109
6.2.2.2.1 Microbial biomass carbon	109
6.2.3 Statistical Analysis	110
6.3 Results	110
6.3.1 Carbon content in vegetation	110
6.3.1.1 Allocation of C in aboveground plant biomass	111
6.3.1.2 Allocation of C in belowground plant biomass	112
6.3.1.3 Short-term vs Long-term vegetation carbon	112
6.3.2 Carbon in floor litter	113
6.3.3 Carbon in humus	114
6.3.4 Soil carbon pool analyses	114
6.3.4.1 Total carbon	114
6.3.4.2 Organic carbon	115
6.3.4.2.1 Seasonality in organic carbon	116
6.3.4.3 Microbial biomass carbon	117
6.3.5 Compartmental allocation of carbon	119
6.3.6 Watershed carbon budget	119

6.4 Discussion	120
CHAPTER VII	
Carbon Flux	
7.1 Introduction	150
7.2 Materials and methods	152
7.2.1 Approach	152
7.2.2 Vegetation carbon accretion analyses	153
7.2.3 CO ₂ flux measurements	154
7.2.3.1 Litter and humus CO ₂ flux	154
7.2.3.2 Soil surface CO ₂ flux	155
7.2.4 The harvest flux	156
7.2.5 Land cover change emissions	156
7.2.6 Statistical Analyses	157
7.3 Results	157
7.3.1 Productivity and carbon accretion	157
7.3.2 Carbon input into litter and humus	159
7.3.3 Respiration loss	160
7.3.3.1 Litter CO ₂ flux	160
7.3.3.2 Humus CO ₂ flux	160
7.3.3.3 Soil surface CO ₂ flux	161
7.3.3.4 Carbon flux through the soil microbial biomass	162
7.3.4 The harvest flux	163
7.3.5 Land cover change emissions	163
7.3.6 Carbon flux variation between land-use/covers	163
7.4 Discussion	164
CHAPTER VIII	
Carbon Dynamics and Models on Land-use/cover Basis	
8.1 Introduction	191
8.2 Carbon Dynamics	192
8.3 Development of Compartment Model for Carbon Cycling	194
8.4 Model Application	199
8.5 Discussion	199
SUMMARY	204
REFERENCES	218
