

A C K N O W L E D G E M E N T S

The results of research on phytochemistry of a local plant, Leucas aspera and chemical transformations of triterpenes, lupanone and friedelin, carried out by the author in the Department of Chemistry, North Bengal University, District Darjeeling, have been compiled for presentation in this thesis.

The author expresses his most sincere gratitude to the supervisor of the research project, Dr.B.P.Pradhan, Reader, Department of Chemistry North Bengal University for his constant encouragements, suggestions and guidance for the work in absence of which, the work could never have been completed. Also acknowledged is the encouragement received from the staff members of the Department of Chemistry, North Bengal University and the fellow officers in the author's parent department, Directorate of Cinchona and Other Medicinal Plants, Government of West Bengal, during the progress of the work.

The author likes to thank Prof. P.Weyerstahl, Germany; Dr.J.N. Shoolery, Varian Asso., USA; Prof. Ageta, Japan for sparing their valuable time to record NMR, MS, GC-MS of various samples sent to them. Their suggestions were of immense help in solving the structural problems of the compounds.

Indebtedness is also expressed to the authorities concerned of the University and the Head of the Department of Chemistry, North Bengal University for granting permission to work in the University laboratory.

The author likes to record with thanks the co-operation received from fellow workers Pranab, Animesh and Sri Rajan babu during the progress of the work. Sincere thanks is also due to Sri A.Majumdar, Scientific Officer, Department of Chemistry, North Bengal University, who was kind enough to record IR spectra of some of the compounds.

Reprints of relevant works and bibliography of L.aspera retrieved from computer data bank, made available to the author by Prof.Finn Sandberg and Dr. Pramila Pereira, Department of Farmakognosi, University of Uppsala is gratefully acknowledged.

Mention here may be made of the encouragement received from the author's wife, parents and other family members during the progress of the work for its success. The present work is in someway the result of their affection and blessings showered on me.

Department of Chemistry,
North Bengal University,
District Darjeeling.

Gyan Chandra Subba
