

## F O R E W O R D

---

The work embodied in this thesis submitted for the degree of Doctor of Philosophy (Science) of the University of North Bengal relates to the role of amlaki (Embllica officinalis Linn.) in experimental ulcers.

While presenting the work, I would like to express my deepest gratitude to Dr. P. K. Basu, Professor and Head, Department of Botany, Centre for Life Sciences, North Bengal University for his helpful suggestions and guidance in course of this investigation.

I am also thankful to all the teachers and research scholars of the Centre for Life Sciences, North Bengal University; Prof. A. K. Senyal, Department of Pharmacology, Institute of Medical Sciences, Banaras Hindu University and the staff of

the department of Biochemistry, North Bengal Medical College and General Hospital for their sincere co-operation in this work.

Lastly, I am deeply indebted to the management of 'THE BIOCHEM' - a biochemical laboratory at Siliguri to render me the facilities of doing some experiments of the present investigation.
