

CONTENTS

1. Introduction	1
2. Review of Literature	7
2.1. Characteristics of myxobacteria	7
2.1.1. Morphology	7
2.1.2. Nutrition	10
2.1.3. Metabolism	12
2.1.4. Genetics	13
2.2. Habitats of myxobacteria	14
2.3. Enrichment, isolation and preservation of myxobacteria	16
2.3.1. Enrichment of bacteriolytic species	16
2.3.1.1. Incubation of natural materials	16
2.3.1.2. Soil baiting	17
2.3.1.3. Singh plates	17
2.3.1.4. Water samples	17
2.3.2. Enrichment of cellulolytic species	18
2.3.3. Isolation of pure cultures	18
2.3.4. Preservation	21
2.4. Classification of myxobacteria	23
2.5. Antibiotics from myxobacteria	28
2.5.1. Screening	29
2.5.2. Chemical structures	30
2.5.3. Mechanism of action	36
2.5.4. Biosynthesis	38
2.5.5. Fermentation	39
2.6. Practical interest	41

3. Materials and Methods	43
3.1. Culture media used	43
3.2. Reagents used	52
3.3. Experimental	55
3.3.1. Collection of soil samples	55
3.3.2. Determination of pH of soil samples	55
3.3.3. Enrichment, isolation and maintenance of myxobacteria	55
3.3.4. Characterization of myxobacterial isolates	57
3.3.4.1. General morphology	57
3.3.4.1.1. Fruiting body	57
3.3.4.1.2. Swarm	57
3.3.4.1.3. Vegetative cell	58
3.3.4.1.4. Microcyst/myxospore	58
3.3.4.2. Gram staining	58
3.3.4.3. Motility	59
3.3.4.4. Ultraviolet fluorescence	59
3.3.4.5. Adsorption of Congo red	59
3.3.4.6. Production of catalase	59
3.3.4.7. Production of oxidase	59
3.3.4.8. Hydrolysis of starch	60
3.3.4.9. Hydrolysis of fat	60
3.3.4.10. Hydrolysis of gelatin	60
3.3.4.11. Hydrolysis of casein	60
3.3.4.12. Hydrolysis of esculin	60
3.3.4.13. Bacteriolytic activity	61
3.3.4.14. Cellulolytic activity	61
3.3.4.15. Anaerobic growth	61

- 3.3.4.16. Production of indole 61
- 3.3.4.17. Voges-Proskauer reaction 61
- 3.3.4.18. Reduction of nitrate 62
- 3.3.4.19. Production of urease 62
- 3.3.4.20. Production of acid and gas from
carbohydrates 62
- 3.3.4.21. DNA base composition 62
- 3.3.4.22. Antibiotic sensitivity 63
- 3.3.5. Identification of myxobacterial isolates 63
- 3.3.6. Screening for antimicrobial activity 63
 - 3.3.6.1. Primary Screening 63
 - 3.3.6.2. Secondary screening 64
- 3.3.7. Optimization of culture conditions for
antibiotic production by *Myxococcus fulvus*
SF126 (ATCC 49305) 65
 - 3.3.7.1. Effect of growth media and time
of fermentation 65
 - 3.3.7.2. Effect of aeration and time of
fermentation 65
 - 3.3.7.3. Effect of initial pH 65
 - 3.3.7.4. Effect of carbon source supplement 66
 - 3.3.7.5. Effect of nitrogen source 66
 - 3.3.7.6. Effect of temperature 66
 - 3.3.7.7. Effect of inoculum size 67
 - 3.3.7.8. Effect of yeast extract 67

3.3.8.	Isolation of the antibiotic substance produced by <i>Myxococcus fulvus</i> SF126 (ATCC 49305)	67
3.3.9.	Homogeneity of the isolated antibiotic	69
3.3.9.1.	Bioautography	69
3.3.9.2.	Thin layer chromatography	69
3.3.10.	Physicochemical properties of the isolated antibiotic	70
3.3.10.1.	Solubility	70
3.3.10.2.	Melting point	70
3.3.10.3.	Response to specific chemical reagents	70
3.3.10.4.	Presence of halogen	70
3.3.10.5.	Ultraviolet and visible spectroscopy	71
3.3.10.6.	Infrared spectroscopy	71
3.3.10.7.	Nuclear magnetic resonance spectroscopy	71
3.3.10.8.	Mass spectrometry	71
3.3.11.	Biological properties of the isolated antibiotic	71
3.3.11.1.	Antimicrobial spectrum	71
3.3.12.	Statistical analysis	72
4.	Results	73
4.1.	Source of soil for isolation of myxobacteria	73
4.2.	Enrichment and isolation of myxobacteria	73
4.3.	Characterization and identification of the myxobacterial isolates	73
4.4.	Distribution of myxobacteria in Indian soils	102
4.5.	Screening of myxobacterial isolates for antimicrobial activities	102

4.6. Optimization of culture conditions for antibiotic production by <i>Myxococcus fulvus</i> SF126 (ATCC 49305)	107
4.6.1. Effect of media and time of fermentation	107
4.6.2. Effect of aeration and time of fermentation	114
4.6.3. Effect of initial pH	114
4.6.4. Effect of carbon source supplement	114
4.6.5. Effect of nitrogen source	114
4.6.6. Effect of temperature	122
4.6.7. Effect of inoculum size	122
4.6.8. Effect of yeast extract	122
4.7. Isolation of antibiotic substance produced by <i>Myxococcus fulvus</i> SF126 (ATCC 49305)	127
4.8. Homogeneity of the isolated antibiotic	127
4.8.1. Bioautography	127
4.8.2. Thin layer chromatography	130
4.9. Physicochemical properties of the isolated antibiotic	130
4.9.1. Physical properties	130
4.9.2. Solubility	130
4.9.3. Melting point	130
4.9.4. Response to specific chemical reagents	130
4.9.5. Presence of halogen	130
4.9.6. Ultraviolet and visible spectroscopy	130
4.9.7. Infrared spectroscopy	132
4.9.8. Nuclear magnetic resonance spectroscopy	132
4.9.9. Mass spectroscopy	132

4.10. Biological properties of the isolated antibiotic	132
4.10.1. Antimicrobial spectrum	132
5. Discussion	134
5.1. Myxobacteria from Indian soil	134
5.2. Antimicrobial activities of the myxobacterial isolates	136
5.2.1. Screening of the isolates	136
5.2.2. Optimization of culture condition for antibiotic production by <i>Myxococcus fulvus</i> SF126	137
5.2.3. Isolation and purification of the antibiotic produced by <i>Myxococcus fulvus</i> SF126	141
5.2.4. Physicochemical properties of the isolated antibiotic	141
5.2.5. Antimicrobial spectrum of the isolated antibiotic	143
6. Summary	145
7. Bibliography	148
