

PLATES

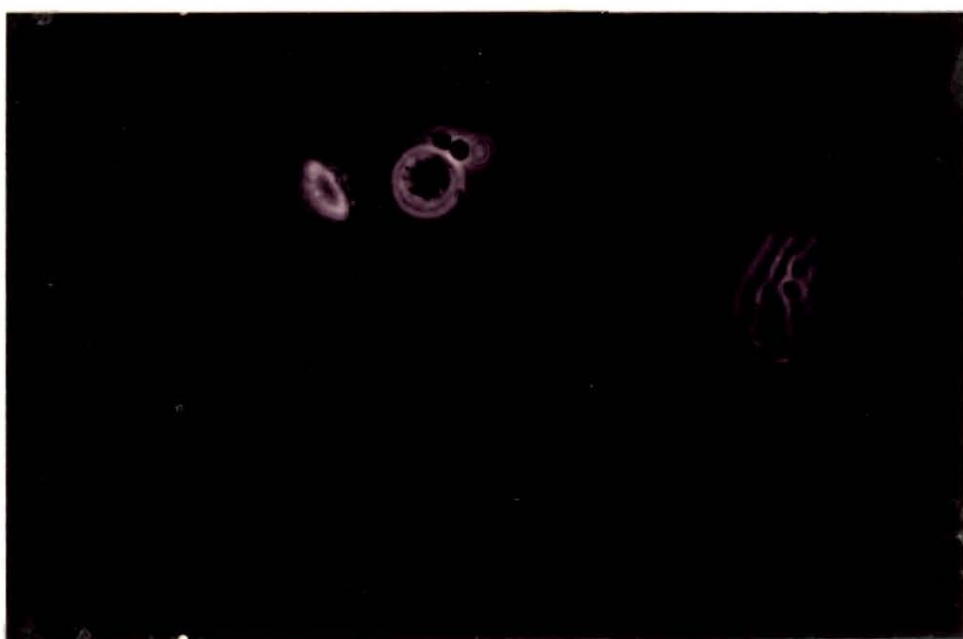

Plate 1. Photograph showing fibrosarcoma tumour on the right side at the base of the hind leg in a male mouse after five weeks of injection of 2×10^6 fibrosarcoma cells subcutaneously.

Plate 2 Phase contrast microscopic photographs of : (A) Single blast NK cell (x100). (B) Blast NK cells sitting on a tumour target cell prior to lysis (x40, two and a half times lesser than A).

(A)

(B)

Plate 3. Photograph showing precipitation reaction of antitumour rabbit serum (in the central well) with cell membrane antigen of ascitic tumour cells (well no.1.) and ascitic fluid (well no. 2). Precipitation lines are visible at both well nos. 1 and 2 and they are cross reactive.
