|                                                               |    |
|---------------------------------------------------------------|----|
| 1. Introduction .....                                         | 1  |
| 2. Literature-review .....                                    | 6  |
| 3. Materials and methods .....                                | 34 |
| 3.1. Plant materials .....                                    | 34 |
| 3.1.1. Host plant .....                                       | 34 |
| 3.1.1.1. Selection of suitable varieties.....                 | 34 |
| 3.1.1.2. Procurement of selected varieties.....               | 34 |
| 3.1.1.3. Plantation of selected varieties.....                | 34 |
| 3.1.1.4. Clonal propagation.....                              | 36 |
| 3.1.1.5. Maintenance of planted varieties.....                | 36 |
| 3.1.2. Collection of plants for extraction of botanicals..... | 36 |
| 3.2. Fungal culture .....                                     | 36 |
| 3.2.1. Source of fungal culture .....                         | 36 |
| 3.2.2. Verification of Koch's Postulates .....                | 38 |
| 3.2.3. Maintenance of stock cultures .....                    | 39 |
| 3.3. Major Chemicals used .....                               | 39 |
| 3.4. Chemical fungicides used .....                           | 40 |
| 3.5. Composition of media and solution used .....             | 41 |
| 3.6. Inoculation technique .....                              | 43 |
| 3.6.1. Detached leaf inoculation .....                        | 43 |
| 3.6.2. Cut shoot inoculation .....                            | 44 |
| 3.6.3. Nursery tea plant inoculation .....                    | 44 |
| 3.7. Disease assessment .....                                 | 44 |
| 3.7.1. Detached leaf .....                                    | 44 |
| 3.7.2. Cut shoot .....                                        | 45 |
| 3.7.3. Nursery tea plant .....                                | 45 |
| 3.8. Growth and physiology of the pathogen .....              | 46 |
| 3.8.1. Assessment of mycelial growth.....                     | 46 |
| 3.8.2. Assessment of germination of spore .....               | 46 |
| 3.8.2.1. Preparation of spore suspension .....                | 46 |
| 3.8.2.2. Spore germination bioassay .....                     | 46 |
| 3.9. Collection and maintenance of rabbits.....               | 47 |
| 3.10. Preparation of antigens .....                           | 47 |

|                                                                                                                                                                      |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| 3.10.1. Antigen from tea leaf .....                                                                                                                                  | 47 |
| 3.10.2. Antigen from fungal mycelia .....                                                                                                                            | 48 |
| 3.11. Raising and collection of antisera through immunization.....                                                                                                   | 48 |
| 3.11.1. Raising of antisera.....                                                                                                                                     | 48 |
| 3.11.2. Collection of sera.....                                                                                                                                      | 49 |
| 3.12. Determination of titre value.....                                                                                                                              | 49 |
| 3.13. Immunological experiments.....                                                                                                                                 | 49 |
| 3.13.1. Immunodiffusion.....                                                                                                                                         | 49 |
| 3.13.2. Immuno-electrophoresis.....                                                                                                                                  | 50 |
| 3.13.2.1. Preparation of agarose coated slides.....                                                                                                                  | 50 |
| 3.13.2.2. Electrophoresis.....                                                                                                                                       | 50 |
| 3.13.2.3. Diffusion.....                                                                                                                                             | 51 |
| 3.13.3. Washing, drying and staining of slides.....                                                                                                                  | 51 |
| 3.13.4. Indirect enzyme-linked immunosorbent assay<br>(ELISA).....                                                                                                   | 51 |
| 3.13.5. Immunofluorescence .....                                                                                                                                     | 52 |
| 3.13.5.1. Fluorescence staining of<br>mycelia of pathogens.....                                                                                                      | 52 |
| 3.13.5.2. Fluorescence staining of<br>leaf sections of host.....                                                                                                     | 53 |
| 3.14. Application of various chemicals in cut shoots<br>of selected tea varieties .....                                                                              | 53 |
| 3.15. Extraction and estimation of orthodihydroxy phenol<br>and total phenol from the leaves of the twigs of selected<br>tea varieties after chemical treatment..... | 54 |
| 3.15.1. Extraction.....                                                                                                                                              | 54 |
| 3.15.2. Estimation of orthodihydroxy phenol.....                                                                                                                     | 54 |
| 3.15.3. Estimation of total phenol.....                                                                                                                              | 54 |
| 3.16. Bioassay of common chemical fungicides by<br>poisoned food technique.....                                                                                      | 55 |
| 3.17. Screening, extraction and bioassay of botanicals.....                                                                                                          | 55 |
| 3.17.1. Preparation of plant extract .....                                                                                                                           | 55 |
| 3.17.2. Spore germination bioassay .....                                                                                                                             | 55 |
| 3.17.3. Preparation of TLC plates.....                                                                                                                               | 56 |
| 3.17.4. Developing of TLC plates.....                                                                                                                                | 56 |

|                                                                                                                                 |    |
|---------------------------------------------------------------------------------------------------------------------------------|----|
| 3.17.5. TLC plate bioassay .....                                                                                                | 56 |
| 3.18. Application of biocontrol agent.....                                                                                      | 57 |
| 3.18.1. Dual culture technique.....                                                                                             | 57 |
| 3.18.2. Bioassay of cell free culture filtrate by Poisoned food<br>technique.....                                               | 57 |
| 3.19. Statistical Analysis.....                                                                                                 | 57 |
| 4. Experimental.....                                                                                                            | 58 |
| 4.1. Pathogenicity test of <i>B. theobromae</i> and <i>C. eragrostidis</i><br>in different tea varieties.....                   | 58 |
| 4.1.1. Pathogenicity test following detached leaf<br>inoculation technique.....                                                 | 58 |
| 4.1.2. Pathogenicity test following cut shoot inoculation<br>technique.....                                                     | 59 |
| 4.1.3. Pathogenicity test following nursery tea plant<br>inoculation technique.....                                             | 64 |
| 4.2. Observation on morphology of<br><i>B. theobromae</i> and <i>C. eragrostidis</i> .....                                      | 73 |
| 4.3. Culture conditions affecting growth and sporulation of<br><i>B. theobromae</i> and <i>C. eragrostidis</i> .....            | 73 |
| 4.3.1. Mycelial growth of <i>B. theobromae</i> and<br><i>C. eragrostidis</i> in different solid media.....                      | 73 |
| 4.3.2. Mycelial growth of <i>B. theobromae</i> and<br><i>C. eragrostidis</i> after different periods<br>of incubation .....     | 77 |
| 4.3.3. Mycelial growth of <i>B. theobromae</i> and<br><i>C. eragrostidis</i> at different pH.....                               | 78 |
| 4.3.4. Assessment of mycelial growth of<br><i>B. theobromae</i> and <i>C. eragrostidis</i><br>on different carbon sources ..... | 80 |

|                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 4.3.5. Assessment of mycelial growth of<br><i>B. theobromae</i> and <i>C. eragrostidis</i><br>on different nitrogen sources .....                                               | 85  |
| 4.3.6. Spore germination and germ tube elongation of<br><i>B. theobromae</i> and <i>C. eragrostidis</i> after<br>different periods of incubation.....                           | 87  |
| 4.3.7. Spore germination and germ tube elongation of<br><i>B. theobromae</i> and <i>C. eragrostidis</i> at different pH.....                                                    | 90  |
| 4.3.8. Spore germination and germ tube elongation of<br><i>B. theobromae</i> and <i>C. eragrostidis</i> at different<br>temperature treatment .....                             | 95  |
| 4.4. Experiments on Immunological studies.....                                                                                                                                  | 98  |
| 4.4.1. Serological relationship between different tea<br>varieties and test pathogens ( <i>B. theobromae</i> and<br><i>C. eragrostidis</i> ) by agar gel double diffusion ..... | 98  |
| 4.4.2. Serological relationship between different tea<br>varieties and test pathogens ( <i>B. theobromae</i><br>immunoelectrophoresis.....                                      | 100 |
| 4.4.3. Immunosorbent assays for detection of<br>cross-reactive antigen.....                                                                                                     | 105 |
| 4.4.3.1. Indirect enzyme-linked immunosorbent<br>assays (ELISA) between (I) <i>B. theobromae</i><br>and tea varieties and (II) <i>C. eragrostidis</i><br>and tea varieties..... | 105 |
| 4.4.3.2. Immunofluorescence between<br>(i) <i>B. theobromae</i> and tea varieties<br>and (ii) <i>C. eragrostidis</i> and tea varieties.....                                     | 109 |
| 4.5. Alteration of disease reaction following application<br>of various chemicals in selected tea varieties against<br><i>B. theobromae</i> and <i>C. eragrostidis</i> .....    | 113 |
| 4.5.1. Induction of resistance by treating with various<br>chemicals.....                                                                                                       | 113 |

|                                                                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 4.5.2. Changes in orthodihydroxy phenol and total phenol contents of healthy leaves and leaves inoculated with <i>B. theobromae</i> and <i>C. eragrostidis</i> ..                                    | 118 |
| 4.6. <i>In vitro</i> bioassay of some commonly used fungicides against <i>B. theobromae</i> and <i>C. eragrostidis</i> .....                                                                         | 123 |
| 4.7. Screening of potential antifungal properties from different plant ex-tracts against <i>B. theobromae</i> and <i>C. eragrostidis</i> ...                                                         | 131 |
| 4.7.1. TLC plate bioassay for detection of antifungal properties of selected plant extracts.....                                                                                                     | 134 |
| 4.8. <i>In vitro</i> screening of some known biocontrol agents for controlling the <i>B. theobromae</i> and <i>C. eragrostidis</i> .....                                                             | 137 |
| 4.9. Foliar application of plant extract, fungal antagonists and fungicides for controlling the foliar diseases of nursery tea plants caused by <i>B. theobromae</i> and <i>C. eragrostidis</i> .... | 142 |
| 5. Discussion.....                                                                                                                                                                                   | 146 |
| 6. Summary.....                                                                                                                                                                                      | 164 |
| 7. References.....                                                                                                                                                                                   | 170 |
