Declaration	iii
Abstract	vii
Acknowledgement	xi
Preface	v
List of figures	xxiii
List of tables	xxxiii
List of appendices	xxxvii
List of annexures	xxxvii
 Chapter-1. Introduction	 1-15
Chapter-2. Review of Literature	16-58
2.1. World Tea History	17-18
2.2. Major tea – producing areas in the world	18-21
2.3. History of Indian tea	21-32
2.3.1. Tea in North-East India	22-24
2.3.1.1. Tea in Assam	22-23
2.3.1.2. Tea in Tripura	23
2.3.1.3. Tea in Arunachal Pradesh	24
2.3.1.4. Tea in Manipur	24
2.3.1.5. Tea in Nagaland	24
2.3.2. Tea in Sikkim	25
2.3.3. Tea in West Bengal	25-28
2.3.3.1. Tea in Darjeeling District	25-26
2.3.3.2. Tea in Kalimpong district	27
2.3.3.3. Tea in Jalpaiguri district	27
2.3.3.4. Tea in Coochbehar district	27
2.3.3.5. Tea in Alipurduar district	28
2.3.3.6. Tea in North Dinajpur district	28
2.3.4. Tea in Bihar	28-29

2.3.5. Tea in Odisha	29
2.3.6. Tea in South India	29-31
2.3.6.1. Tea in Nilgiri	29-30
2.3.6.2. Tea in Anaimalai Hills	30
2.3.6.3. Tea in Kerala	30
2.3.6.4. Tea in Karnataka	31
2.3.6.5. Tea in Tamil Nadu	31
2.3.7. Tea in North India	31-32
2.3.7.1. Tea in Uttarakhand	31
2.3.7.2. Tea in Himachal Pradesh (Kangra Valley)	32
2.4. Climatic conditions for tea plantation in North East India	33-35
2.4.1. Rainfall	33
2.4.2. Temperature	33-34
2.4.3. Relative Humidity	34
2.4.4. Light	34
2.4.5. Wind	34
2.4.6. Soils	35
2.5. Tea taxonomy	35-37
2.6. General Morphology of Tea Plant	37-38
2.7. Tea variety and their morphological characteristics	39-41
2.8. Morphological characterization and it's importance	41-43
2.9. Application of Micromorphological Characterization	43-46
2.10. Pollen germination and the importance of breeding programmes	46-47
2.11. Anatomical characterization and it's uses in plant taxonomy	48-49
2.12. Leaf architecture and its significance in plant taxonomy	49-50
2.13. Study of Molecular characterization	50-51
2.14. Chemical characterization and solving taxonomic problem	51-52
2.15. Antioxidant Potential of Tea	52-53
2.16. In Silico characterization of Tea phytochemicals	53-54
2.17. Medicinal properties of Tea	54-57
2.18. Importance of tea germplasm accessions in the breeding programme	57-58

Chapter-3. Study area	59-79
3.1. Introduction	60-61
3.2. Terai region of Darjeeling district	61-71
3.2.1. Location	61-62
3.2.2. Geographical area and boundaries	62
3.2.3. Phytogeographic region of Terai	62-63
3.2.4. Forest type	63-64
3.2.5. Climatic condition	64-69
3.2.5.1. Temperature	64-66
3.2.5.2. Precipitation/rainfall	66-68
3.2.5.3. Relative Humidity	68-69
3.2.5.4. Fog	69
3.2.5.5. Seasons	69
3.2.6. River	70
3.2.7. Soil	70
3.2.8. Vegetation	70-71
3.3. Tea Estates of Terai region	71-79
Chapter-4. Materials and Methods	80-106
4.1. Survey and collection of potential tea germplasm accessions	81-83
4.1.1. Field survey	81
4.1.2. Documentation of Tea Germplasm accessions (Clones)	81-82
4.1.3. Flushing, flowering and fruiting calendar	82
4.1.4. Collection of study materials	83
4.2. Documentation and preservation in the Herbarium	83-84
4.2.1. Collection and processing of voucher specimen	83-84
4.2.2. Herbarium preservation	84
4.3. Morphological characterization of collected tea germplasm accessions	84-87
4.3.1. Vegetative morphological characterization	84-85
4.3.1.1. Statistical analysis of vegetative morphological characteristics	85
4.3.2. Reproductive morphological characterization	85-86
4.3.2.1. Statistical analysis of reproductive morphological characteristics	86-87

4.4. Micro-morphological characterization	87-90
4.4.1. Leaf surface cell structure	87
4.4.2. Study of trichomes	88
4.4.3. Leaf epidermal micromorphological analyses by SEM	88-89
4.4.4. Pollen micromorphology	89-90
4.5. Anatomical characterization	90-93
4.5.1. Leaf and Stem anatomy	90-91
4.5.1.1. Data Analysis	91-92
4.5.2. Study of stomata	92-93
4.6. Leaf Architectural Study	93-96
4.6.1. Morphological data acquisition	93
4.6.2. Leaf area measurement	94
4.6.3. Leaf clearing and specimen preparation	94
4.6.4. Study of venation pattern	94-95
4.6.5. Determination of vein islet (Areole) and vein termination number	95
4.6.6. Statistical analysis	95-96
4.7. Chemical characterization	96-99
4.7.1. Tea extracts preparation	96
4.7.2. Total tannin quantification	96
4.7.3. Determination of condensed tannins	97
4.7.4. DPPH radical scavenging activity	97
4.7.5. ABTS radical scavenging activity	98
4.7.6. Total antioxidant activity by phosphomolybdenum method	98
4.7.7. Statistical analysis	98-99
4.8. Variation in bioactive phytochemicals analyzed by GC-MS technique	99-100
4.8.1. Sample selection	99
4.8.2. Gas chromatography-Mass spectrometry (GC-MS) analysis	99-100
4.9. In silico characterization	101
4.9.1. Protocol for molecule selection	101
4.9.2. Protocol for in silico molecular docking	101
4.10. Molecular characterization	102-105

4.10.1. Sample selection	102
4.10.2. Experiment protocol	102-105
4.10.2.1. DNA Extraction and purification	102-103
4.10.2.2. PCR amplification	103-104
4.10.2.3. Gel electrophoresis	104
4.10.2.4. Image analysis protocol	104-105
4.11. Pollen Germination Study	105-106
4.12. Conservation of Tea germplasm accessions	106
Chapter-5. Results and Discussion	107-399
5.1. Survey and collection of potential tea germplasm accessions	108-120
5.1.1. Field survey	108-114
5.1.2. Documentation of Tea Germplasm accessions	114-118
5.1.3. Flowering calendar of studied tea germplasm accessions	118-120
5.2. Documentation and preservation in the Herbarium	120-123
5.3. Morphological characterization	123-195
5.3.1. Vegetative morphological characterization	123-161
5.3.1.1. Principal component and cluster analysis	159-161
5.3.2. Reproductive morphological characterization	161-195
5.3.2.1. Principal component and cluster analysis	192-195
5.4. Micro-morphological characterization	196-258
5.4.1. Leaf surface cell structure by light microscope (LM)	196-209
5.4.2. Leaf surface cell structure by scanning electron microscope (SEM)	210-217
5.4.3. Trichomes on the leaf epidermis	218-235
5.4.4. Micromorphology of Pollen structure	235-258
5.5. Anatomical characterization	258-317
5.5.1. Stem anatomy	258-299
5.5.1.1. Principal component and cluster analysis	297-299
5.5.2. Leaf lamina and midrib anatomy	299-306
5.5.2.1. Principal component and cluster analysis	302-306
5.5.3. Petiole anatomy	306-313
5.5.3.1. Principal component and cluster analysis	309-313

5.5.4. Stomata on the leaf epidermis	314-317
5.6. Leaf Architectural Study	317-338
5.6.1. Variation of qualitative leaf architectural characteristics of tea clones	317-320
5.6.2. Variation in major and minor venation patterns	320-326
5.6.3. Variation in quantitative leaf parameters across different tea clones	326-333
5.6.3.1. Variations of leaf length	330
5.6.3.2. Variations of leaf width	330
5.6.3.3. Variations of leaf area	330
5.6.3.4. Variations of primary vein size	330-331
5.6.3.5. Variations of petiole length	331
5.6.3.6. Variations of secondary vein number	331
5.6.3.7. Variations of inter-secondary vein number	331
5.6.3.8. Variations of the angle between primary (1^0) and secondary (2^0) vein	332-333
5.6.4. Correlation between quantitative leaf traits	333
5.6.5. Principal component and Cluster analysis	334-338
5.7. Chemical Characterization	338-347
5.7.1. Clones exhibited variation in total tannin, condensed tannin and antioxidant potential	338-340
5.7.1.1. Variation in total tannin content	338-339
5.7.1.2 Variation in condensed tannin content	339
5.7.1.3 Variation in antioxidant activity	339-340
5.7.2. Principal component and cluster analysis	341-343
5.7.3. Comprehensive antioxidant activity analysis of TS520, TV27, TV9, and P126 leaf extracts	344-347
5.8. Variation in bioactive phytochemicals analyzed by GC-MS technique	347-369
5.8.1. Phytochemical variation between TV1, TV23, TV30, and 124.48.8 leaf extracts	347-356
5.8.1.1 GC MS analysis of TV1 extract	348-349
5.8.1.2 GC MS analysis of TV23 extract	350-351
5.8.1.3 GC MS analysis of TV30 extract	351-352
5.8.1.4. GC-MS analysis of 124.48.8 leaf extract	353-356

5.8.2. Phytochemical variation in TS520, TV27, TV9, and P126 leaf extracts	356-369
5.8.2.1. GC-MS analysis of TS520 leaf extract	358-359
5.8.2.2. GC-MS analysis of TV27 leaf extract	360-362
5.8.2.3 GC-MS analysis of TV9 leaf extract	362-364
5.8.2.4 GC-MS analysis of P126 leaf extract	365-369
5.9. In silico molecular docking	370-379
5.9.1. Drug likeliness analysis	372-374
5.9.2. Molecular docking analysis	374-379
5.10. Molecular characterization	379-389
5.10.1. Clone selection based on leaf morphology and architectural traits using hierarchical cluster analysis	379-380
5.10.2. Genetic diversity and relationship among selected tea germplasm accessions by RAPD analysis	380-389
5.11. Pollen Germination study	390-397
5.11.1. Variations of germination percentage of 36 tea germplasm accessions	390-397
5.11.2. Variations of pollen tube length of 36 tea germplasm accessions	390-397
5.12. Conservation of Tea germplasm accessions	397-399
Chapter-6. Conclusion	400-408
Chapter-7. Bibliography	409-476
Appendix (A-F)	I-XXI
Annexure (A-B)	XXII-XXXIII
