Preface	i
General Introduction	1- 8
Chapter 1: Antibiotic resistance patterns of culturable copiotrophic bacteria from river Torsa	9-57
1.1 Introduction	9
1.1.1 Antimicrobial resistance in the environment	9
1.1.1.1 Drinking water	9
1.1.1.2 Ground water	10
1.1.1.3 Surface water	11
1.1.2 River water quality monitoring in the light of bacterial antibiotic resistance	12
1.1.3 Water quality monitoring programs in India	12
1.1.4 Importance of antibiogram surveillance	20
1.2 Materials and Methods	21
1.2.1 Sampling stations and sample collection from the river water	21
1.2.1.1 Selection of sampling stations on Torsa river	22
1.2.1.2 Sample collection	22
1.2.2 Preparation of antibiotic stock solutions and antibiotic plates	22
1.2.3 Enumeration of total culturable copiotrophic bacteria and the fraction resistant to different antibiotics	22
1.2.4 Determination of multiple-antibiotic-resistance (MAR) profile of copiotrophic bacterial isolates	24
1.2.5 Statistical analyses	24
1.3 Results	25
1.3.1 Quantification of culturable copiotrophic bacteria and other fractions resistant to five different antibiotics, ampicillin, chloramphenicol, kanamycin, streptomycin and tetracycline, in water samples collected in different months, spread over the years 2000 and 2001, from three sampling stations on river Torsa	25
1.3.2 Time Series Analysis: Determination of trend(s) of occurrence(s) of five different antibiotic resistant bacterial fractions of the culturable copiotrophs.	28
1.3.3 Wilcoxon matched pairs signed ranks test	29
1.3.4 Variance analysis in two-way classification	30
1.3.5 Determination of antibiotic-resistance-patterns (ARPs)	31
1.3.5.1 Analysis of ARPs of the antibiotic resistant bacteria from SS I	31
1.3.5.2 Analysis of ARPs of the antibiotic resistant bacteria from SS II	35
1.3.5.3 Analysis of ARPs of the antibiotic resistant bacteria from SS III	38
1.3.6 Comparison of antibiotic resistant bacteria recovered from three sampling sites on river Torsa	42
1.3.7 Statistical analysis of data on singly and multiply-antibiotic-resistant (resistance to two or more antibiotics tested)	

bacteria in the antibiotic- resistant population pooled from water samples collected from three different sampling stations, SS I, SS II, SS III, along the river Torsa	45
1.4 Discussion	47
1.5 Conclusion	54
1.6 Summary of Chapter 1	55
1.7 References	56
Chapter 2: Transferable plasmid mediated resistance to multiple antimicrobial agents in copiotrophic bacterial isolates in river Torsa	58-96
2.1 Introduction	58
2.1.1 Origin and development of antibacterial resistance in bacteria	59
2.1.2 Horizontal gene transfer – as a means for spread of resistance genes and resistance development	61
2.1.2.1 Conjugation	61
2.1.3 Plasmids – as a vehicle for carrying antibiotic resistance genes: Their role in the spread of antibiotic resistance among bacteria	64
2.1.4 Conjugal transfer in aquatic environment	67
2.1.5 Concept of horizontal gene transfer in the post genomic era	69
2.2 Materials and Methods	72
2.2.1 Chemicals and reagents	72
2.2.2 Bacterial isolates	72
2.2.3 Antibiotic resistance determination	73
2.2.4 MAR indexing	73
2.2.5 Isolation of plasmid DNA (Mini Prep)	73
2.2.6 Preparation of plasmid DNA by alkaline lysis with SDS: Midi preparation	74
2.2.7 Agarose gel electrophoresis	75
2.2.8 Selection of bacterial isolates for conjugation study	75
2.2.9 Culture media	75
2.2.10 Conjugation Study	75
2.2.11 Enumeration of bacteria	75
2.2.12 Genetic characterization of recovered cells	76
2.2.13 Size determination and restriction mapping of plasmids	76
2.2.14 Cloning of DNA fragments in pBluescript KS (+) vector	76
2.3 Results	77
2.3.1 Antibiotic resistance profile of the 100 antibiotic resistant copiotrophic bacterial isolates	77
2.3.2 Detection of plasmid DNA	79
2.3.3 Conjugation study	79
2.3.4 Genetic characterization of the recovered cells	82
2.3.5 Restriction digestion of the plasmid DNAs obtained from respective transconjugants	82
2.3.6 Cloning of <i>EcoRI</i> fragments of plasmid DNA of Tc : TR 48 in pBluescript KS ⁺	83
2.4 Discussion	83
2.5 Conclusion	91
2.6 Summary of Chapter 2	91
2.7 References	92

Chapter 3: Molecular characterization of antibiotic resistance gene cassettes associated with class 1 integrons in Gram-negative multiple-antibiotic-resistant copiotrophic bacterial isolates from river Torsa and determination of the carriage of class 1 integrons on conjugative plasmids	97-156
3.1 Introduction	97
3.1.1 Integrons as tool of natural genetic engineering system	97
3.1.2 Types and structural organization	97
3.1.3 Class 1 integrons	98
3.1.4 Gene cassettes	99
3.1.4.1 Spread of gene cassettes	103
3.1.5 Integron Epidemiology	103
3.1.5.1 Integrons in clinical settings	103
3.1.5.2 Integrons in non-clinical samples	104
3.1.5.3 Integrons in aquatic environments	105
3.1.5.4 Integrons in gram-positive bacteria	105
3.1.6 Integron study in India	106
3.2 Materials and methods	107
3.2.1 MAR isolates for detecting the presence of class 1 integrons	107
3.2.2 Antibiotic resistance determination	107
3.2.3 Detection of class 1 integrons by polymerase chain reaction (PCR) Amplification	107
3.2.4 Size determination of the CS-PCR products	108
3.2.5 Characterization of integrons by restriction fragment length polymorphism (RFLP) typing	108
3.2.6 Statistical analysis	108
3.2.7 Identification of class 1 integron-positive MAR isolates	109
3.2.8 Detection of class 1 integrons on the conjugative plasmids of transconjugants by CS-PCR	109
3.2.9 Identification of the amplicons generated from donors and their respective transconjugants	109
3.2.10 Cloning of amplicons generated with 5' CS and 3' CS primers	109
3.2.10.1 Chemicals and reagents	109
3.2.10.2 Elution of the PCR products from low melting point agarose	109
3.2.10.3 Cloning of the PCR product	110
3.2.11 DNA sequencing and computer analysis of the sequence data	110
3.2.12 Analysis of the sequence	110
3.2.13 Accession numbers	111
3.3 Results	111
3.3.1 Antimicrobial resistance pattern of MAR isolates	111
3.3.2 Detection of class 1 integrons and RFLP typing of the CS-PCR product	111
3.3.3 Identification of integron-positive isolates	111
3.3.4 Test of significance	111
3.3.5 Identification of integron-borne gene cassettes	112
3.3.5.1 Sequence analysis of CS-PCR product derived from TR 02	113
3.3.5.2 Sequence analysis of CS-PCR product derived from TR 17	113

3.3.5.3	Sequence analysis of CS-PCR product derived from TR 40	114
3.3.5.4	Sequence analysis of CS-PCR product derived from TR 48	114
3.3.5.5	Sequence analysis of CS-PCR product derived from TR 52	115
3.3.5.6	Sequence analysis of CS-PCR product derived from TR 58	115
3.3.5.7	Sequence analysis of CS-PCR product derived from TR 59	115
3.3.5.8	Sequence analysis of CS-PCR product derived from TR 63	116
3.3.5.9	Sequence analysis of CS-PCR product derived from TR 85	116
3.3.5.10	Sequence analysis of CS-PCR product derived from TR 90	116
3.3.5.11	Sequence analysis of CS-PCR product derived from TR 95	117
3.3.5.12	Sequence analysis of CS-PCR product derived from TR 97	118
3.3.6	Location of class 1 integrons on the conjugative plasmids	118
3.4	Discussion	146
3.5	Conclusion	150
3.6	Summary of Chapter 3	151
3.7	References	152
Chapter 4:	Taxonomic characterization of class 1 integron positive isolates	157-172
4.1.	Introduction	157
4.1.1	Materials and methods	157
4.1.1.1	Bacterial isolates	157
4.1.1.2	Media and culture conditions	157
4.1.1.3	Biochemical tests	158
4.1.2	Results and Discussions	161
4.2.	Phylogenetic analysis of the isolate TR 90 [isolate possessing novel ORF encoding dihydrofolate reductase for trimethoprim resistance] using 16S rRNA gene sequence	166
4.2.1	Materials and methods	166
4.2.1.1	Bacterial isolate	166
4.2.1.2	Isolation of total genomic DNA	166
4.2.1.3	Amplification, cloning and sequencing of 16S rRNA gene of the strains	167
4.2.1.4	Phylogenetic analysis of the strains	167
4.2.2.	Results and discussions	168
4.3	Conclusion	171
4.4	Summary of Chapter 4	171
4.5	References	172
General Discussion and Summary		173-179
