

# CONTENTS

		<u>Page</u>
<b>Introduction</b>		
1	General	1
1.1	History of early works	1
2	Debye equation of polarization	2
2.1	Derivation of Debye equation from somewhat different concepts	5
2.2	Modification of the internal field in the Debye equation	7
2.3	Debye formulation of relaxation time with molecular radius	10
2.4	Modification of internal viscosity and derivation of the molecular shape from spherical symmetry in the Debye equation	11
3	Distribution of relaxation times	14
4	A brief review of the previous works	22
5.	Scope and objects of the present investigation	31
 <b>Experimental Technique</b>		
1	Measurement of dielectric permittivity and dielectric loss	37
1.1	Surber's method	37
1.1.1	The actual experimental arrangement	42
1.2	Poley's method	43
2	Measurement of static dielectric constant of liquids	45
3	Determination of viscosity	46
4	Refractive index	47
5	Purification of samples	47
6	Standardisation of the dielectric data obtained in the present investigation	47
7	Activation energy of dielectric relaxation	47
8	Activation energy for viscous flow	48
 <b><u>Part I</u></b>		
Dielectric studies of some rotational isomeric molecules of 1,2-disubstituted ethane		
	General Introduction	51
 <b>Chapter I</b> <u>Investigations on dielectric relaxation of 1,2-dichloro- and 1,2-dibromoethane in liquid state</u>		
1	Introduction	54
1.2	Results	54
1.3	Discussion	56

		<u>Page</u>
Chapter II	<u>Investigations on dielectric studies of 1-chloro-2-bromoethane in the liquid state</u>	
1	Introduction	... 60
2	Results	... 60
3	Discussion	... 62
Chapter III	<u>Investigations on dielectric studies in some rotational isomeric molecules</u>	
1	Introduction	... 66
2	Results	... 66
3	Discussion	... 69
3.1	Equality between dipolar activation energy ( $\Delta H^{\ddagger}$ ) and the electrostatic potential energy difference between rotamers in the liquid state ..	69
3.2	Energy difference	... 72
3.3	Distribution parameter	... 73
Chapter IV	<u>Investigations on dielectric studies in isobutyl halides in the liquid state</u>	
1	Introduction	... 76
2	Results	... 76
3	Discussion	... 78
3.1	Activation energy and electrostatic potential energy	... 79
3.2	Energy difference between the isomers in the liquid state	... 81
Chapter V	<u>Investigations on microwave absorption in 1,2-dialkoxyethanes in the liquid state</u>	
1	Introduction	... 84
2	Results	... 85
3	Discussion	... 86
Summary		... 90
Conclusion		... 94
<u>Part II</u>		
Dielectric studies of some ester molecules in the liquid state		
	General Introduction	... 96
Chapter I	<u>Investigations on the microwave absorption in some esters of benzoic acid in the liquid state</u>	
1	Introduction	... 98
2	Results	... 100
3	Discussion	... 100

Chapter II	<u>Investigations on dielectric studies in some mono-carboxylic esters in the liquid state</u>		
1	Introduction	...	104
2	Results	...	104
3	Discussion	...	106
	Summary	...	112
	Conclusion	1..	113
APPENDIX :	List of Publications
