

Contents

1. A review of Delbrück scattering	1
1.1. Delbrück scattering as a non-linear QED phenomenon	1
1.2. Theoretical aspects of Delbrück scattering	4
1.2.1. Theories for high energies and small angles	11
1.2.2. Theories for intermediate energies and moderately large angles	14
1.2.3. Theories for low energies and all angles	14
1.3. Scattering amplitudes of other elastic scatterings	16
1.3.1. Rayleigh scattering amplitudes	17
1.3.2. Nuclear Thomson Scattering	20
1.3.3. Nuclear Resonance Scattering	21
1.4. Experimental Investigation	21
1.4.1. Introduction	21
1.4.1.1. Detectors	22
1.4.1.2. Sources	24
1.4.1.3. Scatterers	24
1.4.2. Experimental results	25
1.4.2.1. High-energy small-angle experiment	25
1.4.2.2. Low energy experiments	27
1.4.2.2.1. Coulomb correction	31
1.4.2.3. Intermediate energy experiments	33
1.5. Discussion	35
2. Measurements of total photon-atom and photoelectric absorption cross sections near pair production threshold	38
2.1. Introduction	38
2.2. Basic Criteria of a 'good geometry' for the experimental arrangement	41
2.3. Experimental arrangements	41
2.3.1. Collimation of incident and the transmitted γ -ray beam and precaution against small angle scattering	42
2.3.2. Precaution against multiple scattering	45
2.3.3. Requirements in the detector system	45
2.3.4. Gamma ray sources used in the measurements	46
2.3.5. Absorbers used in the measurements	47

2.4. Experimental Method and Measurements	47
2.4.1. Procedure	48
2.4.2. Measurements	49
2.5. Evaluation of uncertainties in measurements	52
2.6. Photoelectric absorption cross sections derived from the measured mass attenuation coefficients	54
2.6.1. Introduction	54
2.6.2. Results	56
2.7. Discussions	58
3. Measurements of Delbrück scattering	59
3.1. Introduction	59
3.2. Fundamental requirements in the design of “good geometry” of an elastic scattering experiment	63
3.3. Experimental arrangements	63
3.3.1. Collimation of primary γ -ray beam	64
3.3.2. Requirements in the targets	65
3.3.3. Requirements in the detector system	66
3.3.4. Other Requirements	68
3.4. Experimental Method and Measurements	68
3.4.1. Procedure	72
3.4.2. Errors and Corrections	77
3.5. Theoretical estimates of elastic cross sections	80
3.6. Results	85
3.7. Discussion	93
4. Examining the scaling behavior of Delbrück scattering in experimental data	95
4.1. Introduction	95
4.2. Scaling hypothesis of Delbrück amplitudes	96
4.3. Testing scaling hypothesis in experimental data	99
4.3.1. A modified form of scaling	101

4.4. Discussion	105
5. Astrophysical applications of Delbrück scattering: Dust scattered gamma radiation from <i>GRB</i>	108
5.1. Introduction	108
5.2. Compton versus Delbrück Scattering at high energy and small angle	110
5.3. Dust scattered gamma emission from <i>GRB</i>	113
5.4. Discussion	120
6. Brief summary of the thesis	122
 <i>References</i>	125
