

TABLE OF CONTENTS

CHAPTER 1	Introduction and Preliminaries	1
1.1	Origin and development of different aspects of locational problems	2
1.1.1	Selection of criterion	4
1.1.2	Choice of norms	4
1.1.3	Minimax and minimum location problems in networks	6
1.1.4	The Euclidean MSC problem	7
1.1.5	Generalisation of the single facility problem	9
1.1.6	Another generalisation of the single facility problem	10
1.1.7	Algorithms	11
1.1.8	Locating an undesirable facility using the minimax criterion	13
1.2	Solution procedures for some rectilinear distance planar single facility problem	15
1.2.1	Elzinga and Hearn algorithm	15
1.2.2	Francis algorithm	16
1.2.3	Drezner and Wesolowsky algorithm	21
1.3	The present methodology	23
1.3.1	The solution procedure for the unconstrained case	26
1.3.2	The solution procedure for the constrained case	38

CHAPTER 2	Weighted unconstrained problems	42
2.1.1	Solution of a weighted one-centre problem under the L_1 norm	42
2.1.2	Procedure	45
2.1.3	Solution of the problem	54
2.1.4	Algorithm	59
2.1.5	Analysis of time complexity	60
2.1.6	Numerical example	62
2.1.7	Computational experience	63
2.1.8	Sensitivity analysis	64
2.2.1	Solution of an asymmetric rectilinear distance minimax location problem	66
2.2.2	Problem formulation	69
2.2.3	Solution of the problem	71
2.2.4	Algorithm	82
2.2.5	Numerical example	84
2.2.6	Operation count	86
2.2.7	Appendix	87
CHAPTER 3	Constrained problems	88
3.1.1	Geometric solution of a constrained rectilinear distance minimax location problem	88
3.1.2	Problem statement	89
3.1.3	The algorithm	92
3.1.4	Analysis of time complexity	94
3.1.5	Sensitivity analysis	95
3.1.6	Numerical solutions	96

3.1.7	Appendix	98
3.2.1	Geometric solution to some planar constrained minimax problems involving the weighted recti- linear metric	100
3.2.2	Formulation of the problem	101
3.2.3	Preliminaries	103
3.2.4	Algorithm	106
3.2.5	Numerical examples	108
3.2.6	Appendix	111
CHAPTER 4 Computer codes		113
4.1.1	Pseudo code of the weighted minimax problem	113
4.1.2	Pascal program for the weighted unconstrained location problem	117
4.1.3	Pascal program of the equiweighted constrained minimax location problem	123
