Summary	i-iv

Part I: Section- A

I-A: Palladium-Catalyzed Amination of Halopyridines on a KF-Alumina Surface

I-A.1: Heteroaromatic Amines and Their Synthesis	1
I-A.1.1: Introduction	1
I-A.1.2: Arylamines: Preparative Methods	5
I-A.1.2a: Electrophilic Nitration & Reduction	5
I-A.1.2b: Electrophilic Substitution	6
I-A.1.2c: Aromatic Nucleophilic Substitution: The S _N Ar Mechanism.	7
I-A.1.2d: Aromatic Nucleophilic Substitution: The Benzyne Mechanism	8
I-A.1.2e: Aromatic Nucleophilic Substitution by S _{RN} 1 Mechanism	9
I-A.1.2f: Transition-metal promoted Amination of Aryl halides	11
I-A.2.1: Present Work: Background, Objectives and Strategy	40
I-A.2.2: Present Work: Result and Discussion	47
I-A.2.3: Conclusion	53
I-A.3: Experimental	54
I-A.4: References	61

Part-I: Section-B

I-B: KF-Alumina Mediated Palladium-Catalyzed C-C Coupling Reaction: Synthesis of Polyaryls

I-B.1: Background, Objectives and Strategy	74
I-B.1.1: A Brief Introduction on PAH	74
I-B.2: Present Work: Results and Discussion	82
I-B.3: Conclusion	87
I-B.4: Experimental	88
I-B.5: References	91

Contd...

Part-II: Section-A

II-A: Direct Reductive Amination of Aldehydes and Ketones Using Potassium Formate and Catalytic Palladium Acetate: Development of a New and Simple Protocol

II-A.1: Reductive Amination: A Brief Review	95
II-A.2.1: Present Work: Background, Objectives and Strategy	114
II-A.2.2: Present Work: Results and Discussion	118
II-A.3: Conclusion	121
II-A.4: Experimental	122
II-A.5: References	127

Part-II: Section-B

II.B: Chemoselective Reduction of Functionalized Alkenes Using Potassium Formate and Catalytic Palladium Acetate

II-B.1: Present Work: Background, Objectives and Strategy	135
II-B.2: Present Work: Result and Discussion	139
II-B.3: Conclusion	142
II-B.4: Experimental	143
II-B.5: References	150
