1. INTRODUCTION	1 - 7
2. LITERATURE REVIEW	8 - 54
3. MATERIAL AND METHODS	55 - 89
3.1. Plant Material	55
3.1.1. Collection	55
3.1.2. Clonal propagation	55
3.1.3. Maintenance in glasshouse	55
3.2. Genomic fingerprinting by RAPD and ISSR markers	56
3.2.1. Preparation of genomic DNA extraction buffer	58
3.2.2. Genomic DNA isolation	58
3.2.3. Genomic DNA purification	59
3.2.4. Measure DNA concentration using Spectrophotometry	59
3.2.5. Agarose gel electrophoresis to check DNA quality	60
3.2.6. Preparation of DNA sample for electrophoresis	60
3.2.7. Run gel electrophoresis for DNA fractionation	60
3.2.8. Preparation of buffer for genomic fingerprinting	60
3.2.9. PCR amplification for RAPD fingerprinting	61
3.2.10. PCR amplification for ISSR fingerprinting	62
3.2.11. Fractionation of PCR products in 1% agarose gel	62
3.3. PCR amplification for chitinase gene	63
3.3.1. Preparation of gene amplification buffer solution	63
3.3.2. DNA isolation	63
3.3.3. DNA purification	63
3.3.4. Measure DNA concentration using Spectrophotometry	63
3.3.5. Chitinase gene specific PCR amplification	64
3.3.6. Fractionation of chitinase gene product	64
3.3.7. Purification of chitinase gene product	64
3.4. T/A cloning of chitinase gene fragment	65
3.4.1. Preparation of buffer for T/A cloning	65
3.4.2. Ligation into pGEM-T Easy vector	66
3.4.3. Transformation of <i>E. coli</i> host JM109	66
3.4.4. Screening of recombinant positive colonies	67
3.4.5. Isolation of plasmid DNA for sequencing	67
3.4.6. DNA sequencing	68
3.4.7. DNA sequence analysis	68
3.4.8. Submission to GenBank (Accession no.EF67751)	68
3.5. Caffeine synthase gene amplification	68
3.5.1. Preparation of DNA isolation buffer	68
3.5.2. Genomic DNA isolation	68

3.5.3. Purification of genomic DNA	69
3.5.4. Preparation of PCR amplification buffer	69
3.5.5. Caffeine synthase gene specific PCR amplification	69
3.5.6. Fractionation of PCR product in 1% agarose gel	69
3.5.7. PCR product purification	69
3.5.8. DNA sequencing of caffeine synthase specific gene fragment	69
3.5.9. Analysis of caffeine synthase gene sequence	69
3.5.10. Submit to GenBank (Accession no. AY599069, AY601112)	69
3.6. <i>In vitro</i> tissue culture	70
3.6.1. Plant material for <i>in vitro</i> tissue culture	70
3.6.2. Composition of tissue culture media	70
3.6.3. Preparation of stock solution for MS medium (macro and microsalts)	72
3.6.4. Preparation of B5 medium	73
3.6.5. Preparation of stock solution of growth regulators	74
3.6.6. MS medium preparation and sterilization	75
3.6.7. Preparation of undefined supplement (coconut milk)	75
3.6.8. Sterilization of explants	76
3.6.9. Transfer of the explants	77
3.6.10. Initiation of callus culture	77
3.6.11. Initiation of somatic embryogenesis	78
3.6.12. Regeneration of plantlets from somatic embryos and calluses	78
3.6.13. Hardening of <i>in vitro</i> regenerated plantlets	79
3.6.14. Transfer of plantlets to potting mixture	79
3.7. Genomic constitution as revealed by chromosome	79
3.7.1. Plant material	80
3.7.2. Preparation of pre-treating, fixation chemicals and cytological staining	80
3.7.3. Somatic chromosome technique	81
3.7.4. <i>In vitro</i> cytology	82
3.8. Abiotic induction of defense's gene expression by methyl jasmonate (MeJa)	82
3.8.1 Preparation of test solution	82
3.8.2. Foliar application	82
3.9. Chitinase gene specific transcript accumulation	82
3.9.1. Preparation of buffer for RNA isolation and gel electrophoresis	83
3.9.2. Total RNA isolation (transcripts)	84
3.9.3. Quantification of RNA by Spectrophotometry	84
3.10. Denaturing agarose gel electrophoresis for RNA	85
3.10.1. Preparation of 1.2% denaturing agarose gel	85
3.10.2. RNA sample preparation and electrophoresis	85

3.11. Reverse transcriptase-polymerase chain reaction (RT-PCR)	85
3.11.1. Preparation of RT-PCR buffer	86
3.11.2. One-Step RT-PCR for chitinase gene specific transcript accumulation	86
3.11.3. RT-PCR product quantification on gel	88
3.11.4. RT-PCR product purification for transcript accumulation	88
3.11.5. Quantification of purified RT-PCR product (cDNAs) to measure transcript accumulation	89
4. EXPERIMENTAL	90 - 148
4.1. Genomic fingerprinting analysis	90
4.1.1. Statistical data analysis	90
4.1.2. Genetic relationship among genotypes	92
4.1.3. Genetic relationships among the varieties	92
4.1.4. DNA polymorphism within the genotypes	93
4.1.5. DNA polymorphism among the genotypes	93
4.2. Genetic similarity among genotypes	96
4.2.1. RAPD analysis	96
4.2.2. ISSR analysis	100
4.2.3. Genetic similarity matrix and cluster analyses	100
4.2.4. Genetic variability among the different types of tea varieties	107
4.3. Cloning and sequencing of chitinase gene fragment of tea	113
4.3.1. Primer designing	113
4.3.2. Result of CODEHOP run for DOP-primer construction	113
4.3.3. Primer for caffeine synthase gene amplification	115
4.3.4. Analysis of chitinase gene specific PCR amplification product	115
4.3.5. Purification of recombinant pGEM-T Easy plasmid for sequencing the insert	116
4.3.6. Sequencing of 201 bp chitinase gene specific PCR product	116
4.3.7. DNA sequence information of 201 bp of chitinase gene	116
4.4. PCR product of caffeine synthase gene	116
4.4.1. Caffeine synthase gene sequencing and analysis	116
4.5. Growth pattern of calluses in different culture media	120
4.5.1. Effect of hormones and organic additives on growth of callus	120
4.5.2. Effect of auxin and cytokinin on callus growth	121
4.5.3. Effect of coconut milk on callus growth	123
4.5.4. Plantlet regeneration from callus	124
4.6. Induction of somatic embryogenesis	127
4.6.1. Somatic embryo development on immature cotyledons	127
4.6.2. Morphology of somatic embryo	128

4.6.3. Secondary embryogenesis and germination to plantlets	129
4.7. Karyotype analysis of the somatic chromosome complement of tea	132
4.7.1. Chromosome morphology in relation to Karyotype and ideogram	132
4.8. RT-PCR for differential gene expression during induced systemic resistance (ISR)	141
4.8.1. Differential gene expression after induction with Meja	141
4.8.2. Quantification of RNA in treated and control samples	141
4.8.3. Quantification of cDNAs in treated and control samples after RT-PCR	142
4.8.4. RT-PCR product sequencing and analysis using BLAST algorithm	147
5. DISCUSSION	149 - 173
6. SUMMARY	174 - 178
7. REFERENCES	179 - 217
