

Preface

The thesis is built up from the studies and observations made by me during the last five years in the Department of Physics, North Bengal University. It is a great pleasure to offer my sincere and deep gratitude to all those, whose favourable reaction and active interest provided continuous impetus for the preparation of this thesis.

First and foremost, a special " regards and gratitude " is expressed to my supervisor Dr. S.K. Ghosal, Department of Physics, N.B.U., whose continuous helpful guidance, sincere co-operation and encouragement immensely inspired me from the very commencement of this work . I must be thankful to the North Bengal University for providing me the necessary financial assistance. I also wish to take the opportunity to commensurate indebtedness to all my teachers, colleagues and staff-members of the Physics Department for their kind co-operation and helpful support. In particular, I am indebted to my teacher Dr. N.Kar and to my colleague Ms.P.Das for their helpful suggestions in computer handling. The co-operation of the staff-members of the university library is gratefully acknowledged. Particular thanks are due to Dr. K.K. Nandi, Department of Mathematics, N.B.U. and Mr. D.Mukhopadhyay, A.I.R., Siliguri, for their valuable suggestions. I must mention special words of appreciation to Subir Sarkar, T.I.F.R., Bombay, who enthusiastically provided me with references and reprints which helped expeditious completion of this thesis. Also, I would like to record my heartfelt gratitude and indebtedness to my family for their loving support, encouragement and infinite patience which made it possible for me to write this thesis. In fine, I am much indebted to Sj. Chunilal Mukherjee, my father-in-law, whose warm affection at the fag end of his life cannot be forgotten.

March 1st, 1993.
