|---|----------------|
| 1. INTRODUCTION   | 1              |
| 2. REVIEW OF LITERATURE   | 6              |
| 3. MATERIALS AND METHODS  | 34             |
| 4. RESULTS AND DISCUSSION   |                |
| 4.1. Physico-chemical properties of soil samples  | 50             |
| 4.2. Isolation of Phosphate Solubilising Microorganisms   | 52             |
| 4.3. Solubilisation Index and Solubilisation Efficiency of PSB isolates   | 55             |
| 4.4. Quantification of phosphate solubilisation in PKV broth  | 60             |
| 4.5. Quantification of IAA production by PSB isolates   | 69             |
| 4.6. Effect of TCP concentration on phosphate solubilisation by selected PSB isolates                               | 73             |
| 4.7. Effect of glucose concentration on phosphate solubilisation by selected PSB isolates                           | 81             |
| 4.8. Biochemical characteristics of selected PSB isolates   | 89             |
| 4.9. Morphological and Gram Staining characteristics of PSB isolates  | 92             |
| 4.10. Antibiotic sensitivity pattern of PSB isolates  | 93             |
| 4.11. Native PAGE profile of selected PSB isolates  | 97             |
| 4.12. Effect of different pH on the survivality of selected PSB isolates  | 98             |
| 4.13. Survivality pattern of PSB isolates in sterilised soil at different temperatures.                             | 103            |
| 4.14. Effect of PSB isolates on seed germination  | 106            |
| 4.15. Effect of PSB isolates on the yield of pea and potato in the field  | 109            |
| 4.16. Effect of PSB isolates on growth parameters of orange ( <i>Citrus reticulata</i> ) seedling in polythene bags | 114            |
| 4.17. Conclusion  | 118            |
| 5. SUMMARY  | 119            |
| 6. REFERENCES   | 123            |
