Chapter I	1-30
Surfactant Self-Assemblies in Solution: An Overview	
1.1. Surfactant (Amphiphilic) molecules	1
1.2. Self-Assembly of Amphiphilic Molecules	2
1.3. Structure and Shape of Aggregates: The Packing Parameter	3
1.4. Self-Assembled Structures of Amphiphilic Molecules in Water	6
1.4.1. Micelles	6
1.4.2. Worm-like micelles	10
1.4.3. Vesicles	13
1.4.4. Aggregation in non polar solvents: Reverse Micelles	19
1.5. Practical Applications of Molecular Self-assemblies of surfactants	21
References	23
Chapter II	31-39
Scope and Object	
References	38
Chapter III	40-66
Studies on the Aggregation Behaviour of Ammoniumdodecyl Sulfate in Presence of Symmetrical Tetraalkylammonium Salts	
3.1. Introduction and Review of Previous Works	40
3.2. Materials and methods	44
3.3. Results and discussions	45
3.3.1. Critical micellisation concentration (cmc)	45
3.3.2. Degree of counter ion binding	50
3.3.3. Thermodynamics of micellization	51
3.3.4. Clouding of ADS in presence of TBAB	60
References	64

Chapter IV	67-131
Studies on Microstructural Transition of Micellar Aggregates in Presence of Hydroxyl Aromatic Dopants: Rheology and Spectroscopy	
4.1. Introduction and Review of Previous Works	67
4.2. Materials and Methods	74
4.3. Results and discussions	76
4.3.1. Shear Induced Viscosity Studies	76
4.3.2. Effect of Temperature	85
4.3.3. Shear-Induced Viscosity and pH	87
4.3.4. Spectroscopic studies	89
4.3.4.1. ¹ H NMR study	89
4.3.4.2. UV-Visible spectroscopy	96
4.3.4.3. Spectral modifications of dihydroxyaromatic dopants in micellar media	108
4.3.5. Surfactant Probe Binding	114
4.3.6. Cryogenic Transmission Electron Microscopy (cryo-TEM Study	123
4.3.7. Orientation of water molecules at the micelle-water interface	125
References	128
 Chapter V	 132-168
Studies on Vesicular Aggregates of Dimethyldioctadecylammonium Bromide (DDOAB): Influence of cosurfactants and Hydroxyaromatic Dopants	
5.1. Introduction and review of previous works	132
5.2. Gel-to-liquid crystalline phase transition temperature	135
5.3. Materials and Methods	136
5.4. Results and discussions	139
5.4.1. Solubilisation of DDOAB vesicle by Tween 20	139
5.4.1.1. Differential Scanning Calorimetry (DSC)	139

5.4.1.2. Turbidity and Dynamic Light Scattering Measurements	142
5.4.1.3. Fluorescence Anisotropy Measurements	146
5.4.2. Effect of quaternary cationics on the gel-to-liquid crystalline phase transition of DDOAB vesicle dispersion	148
5.4.3. Effect of hydroxyaromatic compounds on the gel-to-liquid crystalline phase transition of DDOAB vesicle dispersion	159
References	166
Chapter VI	169-179
Summary and Conclusion	
List of Publications	180
<i>Addendum and Corrigendum</i>	181
