This is to Certify that MRS. MOITRAYEE ROY CHOWDHURY (CHAKRABARTI) M.Sc. B. Ed. worked in the Immunology & Cell Biology Laboratory, Centre for Life Sciences, University of North Bengal and in the Laboratory of the Department of Biochemistry, North Bengal Medical College & Hospital since July, 1990 for her thesis on the topic "STUDY OF IMMUNE STATUS IN HEPATIC DISORDERS AND EFFECT OF ASCORBIC ACID AND ZINC SUPPLEMENT" for fulfilment of the requirements of the Degree of Doctor of Philosophy (Science) of the University of North Bengal.

She is well conversant with all the techniques and literature cited in the thesis and carried out the work thoroughly and meticulously. It seems that the thesis is fit for submission for Ph.D. and she is worthy for award of the degree.

DR. A. K. CHAKRAVARTY
M.Sc. (Cal, Gold Med.),
Ph. D. (Wiscon, USA)
PROFESSOR
CENTRE FOR LIFE SCIENCES
UNIVERSITY OF NORTH BENGAL
SILIGURI , W.B. -734430
INDIA

DR. A. BANDYOPADHYAY
M. B. B. S. (Cal),
Ph. D. (Cal)
PROFESSOR & HEAD
DEPARTMENT OF BIOCHEMISTRY
N.B. MEDICAL COLLEGE & HOSPITAL
SILIGURI , W.B. -734432
INDIA

TO MY HUSBAND

ACKNOWLEDGEMENTS

I express my most sincere gratitude to both my supervisors Prof. Ashim Kumar Chakravarty (Centre for Life Sciences, North Bengal University) and Prof. Asok Bandyopadhyay (Head of the Department, Biochemistry, North Bengal Medical College) for providing me with the opportunity to persue my research work at the North Bengal University & North Bengal Medical College. Their vast Knowledge, constant availability, incisive questions and above all their patience during the beginning years of my work have been vital to the completion of this thesis. I would like to take this opportunity to express my special thanks to the extensive time and effort Prof. Chakravarty has spent in clearing up my presentation and teaching me the art of writing. Prof. Bandyopadhyay was also kind enough to agree to my thesis and spend the effort in going through it.

I am grateful to the Principal of North Bengal Medical College and the Director, Centre for Life Sciences for giving the permission to avail the facilities in the Department of Biochemistry, N.B. Medical College and the Centre for Life Sciences, N.B. University. I would like to thank the staffs of the Centre for Life Sciences, Library, Watch & Ward Department of N. B. University and also the staffs of Biochemistry Department & Library of N. B. Medical College for their

co-operation throughout my study. Special thanks are due to Mr. Rabi Das for his assistance during the early part of my work.

I am indebted to Dr. G. C. Majumder (IICB, Calcutta), Prof. N. Chowdhury (Physics Department, N. B. University), Dr. D. Chakraborty & Dr. K. K. Halder (Blood Bank & Micro-biology Department), N. B. Medical College for their help during the crucial period of my research work.

I would like to take this opportunity to thank Dr. Saurav Sarkar and Dr. (Mrs.) Asha Sinha for their invaluable help and friendly attitude in the early part of this work. Thanks are also due to my labmates Ms. Anuradha Rai and Mr. Sanjib Das for rendering various types of help throughout the research period.

This thesis owes much in kind to the material support and encouragement that I have received from my elder brother and sister-in-law Dr. S. P. Roy Chowdhury and Dr. (Mrs.) Smritikana Roy Chowdhury (Stanford University, USA). This acknowledgement will not be complete without mentioning the love and constant encouragement that I have received from my eldest brother Dr. D. P. Roy Chowdhury, sister-in-law and my beloved younger brother Prof. V. P. Roy Chowdhury (Purdue University, U.S.A). I am particularly indebted to my parents for their support,

wishful blessings, constant encouragement and affection throughout my research work. I would also like to thank my father-in-law and brother-in-laws for their encouragement, blessings and good wishes.

It is difficult to express in words my gratitude and indebtedness to my six years old daughter, Ankita for her co-operation and sacrifice throughout my work and to my husband Dr. Asim Chakrabarti (Asstt. Professor in Ophthalmology, N.B. Medical college & Hospital) without whose constant support, endless inspiration and patience my research work and this thesis would not have been possible.

Last of all I render my thanks to Mr.Subrata Dey and Mr. Chanchal Paul who took the trouble of typing this thesis and also to all the hepatitis patients, alcoholics and normal persons who volunteered for this study.

Moitrayee RoyChowdhury (Chakrabarti)
11/9/95

MOITRAYEE ROYCHOWDHURY (CHAKRABARTI)

FIGURE INDEX

Figure	Title of the Figure	Page
1	Serum gamma glutamyl transpeptidase (GGT) activity, albumin and globulin percentage in normal and alcoholic subjects..	60
2	Albumin and globulin percentages in normal, alcoholic and infective hepatitis subjects..	61
3	Serum gamma glutamyl transpeptidase (GGT) activity and percentage of serum albumin in normal, alcoholic and ascorbic acid supplemented alcoholics	62
4	Serum gamma glutamyl transpeptidase (GGT) activity and percentage of serum albumin in normal, alcoholic and zinc supplemented alcoholics.....	63
5	Percentages of serum albumin, α_1 , α_2 , β and γ globulin in normal and alcoholic subjects obtained by electrophoretic analysis	64
6	Percentages of serum albumin, β globulin and γ globulin in normal, alcoholic and ascorbic acid supplemented alcoholics obtained by electrophoretic analysis.....	65

Figure	Title of the Figure	Page
7	Percentages of serum albumin, β globulin and γ globulin in normal, alcoholic and zinc supplemented alcoholics obtained by electrophoretic analysis.....	66
8	Serum IgG(a) and IgM(b) in mg percent in normal and alcoholic persons.....	67
9	Percentage of B, T and rosette forming cells in normal and chronic alcoholic subjects.....	68
10	Percentage of B, T and rosette forming cells in normal, alcoholic and ascorbic acid supplemented alcoholics.....	69
11	Percentage of B, T and rosette forming cells in normal, alcoholic and zinc supplemented alcoholics.....	70
12	Blastogenesis of T lymphocytes from normal and alcoholic subjects after stimulation with different doses of PHA.....	71
13	Blastogenesis of T lymphocytes from normal, alcoholic and ascorbic acid supplemented alcoholics after stimulation with different doses of PHA.....	72

Figure	Title of the Figure	Page
14	Blastogenesis of T lymphocytes from normal, alcoholic and zinc supplemented alcoholics after stimulation with different doses of PHA.....	73
15	Incorporation of $^3\text{H-TdR}$ by T lymphocytes of normal and alcoholic subjects after stimulation <u>in vitro</u> with different doses of PHA.....	74
16	Incorporation of $^3\text{H-TdR}$ by T lymphocytes of normal, alcoholic and ascorbic acid supplemented alcoholic subjects after stimulation <u>in vitro</u> with different doses of PHA	75
17	Incorporation of $^3\text{H-TdR}$ by T lymphocytes of normal, alcoholic and zinc supplemented alcoholics after stimulation <u>in vitro</u> with different doses of PHA.....	76
18	Percent of cytotoxicity of T cells in the peripheral blood of normal, alcoholic and alcoholics treated with ascorbic acid and zinc.....	77

(vii)

Figure	Title of the figure	Page
19	Level of plasma ascorbic acid and dehydroascorbic acid in normal, alcoholics and ascorbic acid supplemented alcoholics	78
20	Changes in leucocyte ascorbic acid and dehydroascorbic acid in alcoholics after ascorbic acid supplementation in comparison to normal and alcoholic values.....	79
21	Level of plasma ascorbic acid and dehydroascorbic acid in normal, alcoholics and zinc supplemented alcoholics.....	80
22	Changes in leucocyte ascorbic acid and dehydroascorbic acid in alcoholics after zinc supplementation in comparison to normal and alcoholic values.....	81

Figure	Title of the Figure	Page
Ap.1 a	Changes in the percentage of serum albumin in 6 chronic alcoholic subjects before and after ascorbic acid supplementation.....	91
b	Changes in the percentage of γ globulin in 6 chronic alcoholic subjects before and after ascorbic acid supplementation.....	91
Ap.1 c	Changes in the percentage of T cells in 6 chronic alcoholic subjects before and after ascorbic acid supplementation.....	92
d	Changes in the percentage of B cells in 6 chronic alcoholic subjects before and after ascorbic acid supplementation.....	92
e	Changes in the percentage of rosette forming cells in 6 chronic alcoholic subjects before and after ascorbic acid supplementation.....	92
Ap.1 f	Changes in the percentage of blast cells with 5 $\mu\text{g/ml}$ PHA in 6 chronic alcoholic subjects before and after ascorbic acid supplementation	93
g	Changes in the percentage of blast cells with 10 $\mu\text{g/ml}$ PHA in 6 chronic alcoholic subjects before and after ascorbic acid supplementation	93

Figure	Title of the Figure	Page
Ap.2 a	Changes in the percentage of serum albumin in 6 chronic alcoholic subjects before and after zinc supplementation.....	94
b	Changes in the percentage of serum γ globulin in 6 chronic alcoholic subjects before and after zinc supplementation.....	94
Ap.2 c	Changes in the percentage of T cells in 6 chronic alcoholic subjects before and after zinc supplementation.....	95
d	Changes in the percentage of B cells in 6 chronic alcoholic subjects before and after zinc supplementation.....	95
e	Changes in the percentage of rosette forming cells in 6 chronic alcoholic subjects before and after zinc supplementation.....	95
Ap.2 f	Changes in the percentage of blast cells with 5 $\mu\text{g}/\text{ml}$ PHA in 6 chronic alcoholic subjects before and after zinc supplementation.....	96
g	Changes in the percentage of blast cells with 10 $\mu\text{g}/\text{ml}$ PHA in 6 chronic alcoholic subjects before and after zinc supplementation.....	96

TABLE INDEX

Table	Title	Page
1	Changes in some of the parameters studied in chronic alcoholics in comparison to normal values.....	82
2	Comparison between the albumin : globulin ratio of hepatitis patients and chronic alcoholics without overt liver disease.....	83
3	Changes in the percentage of blast formation and DNA synthesis in chronic alcoholics in comparison to normal values.....	85
4	Changes in GGT activity , serum protein level and immunological parameters of alcoholics before and after ascorbic acid supplementation.....	86
5	Changes in the percentage of blast formation and DNA synthesis in alcoholics before and after ascorbic acid therapy.....	87
6	Changes in GGT activity, serum protein level and immunological parameters of alcoholics before and after zinc therapy.....	88
7	The changes in DNA synthesis in different alcoholic subjects before and after zinc therapy	89
8	Plasma and leucocyte ascorbic acid and dehydroascorbic acid level in chronic alcoholics	90
