ABSTRACT	1
CHAPTER 1. THIN FILM DEPOSITION TECHNIQUES	
— A REVIEW	6
INTRODUCTION	
1.1. Physical Vapour Deposition (PVD)	9
1.2. Electron beam evaporation	13
1.3. Molecular beam epitaxy	15
1.4. Activated Reactive Evaporation (ARE)	17
1.5. Ion plating	18
1.6. Sputtering	20
1.7. Chemical Vapour Deposition (CVD)	27
1.8. Solution Deposition Techniques	34
1.8.1. Electrochemical Deposition (ECD)	35
1.8.2. Chemical Solution Deposition (CSD)	37
References	45
CHAPTER 2. DIP TECHNIQUE	
2.1. INTRODUCTION	47
2.2. Dip Deposition Setup	50
2.3. Insulating Oxide Films	52

	<u>Page</u>
2.3.1. Introduction	52
2.3.2. Alumina (Al_2O_3) Films	53
2.3.3. Tin dioxide (SnO_2) Films	55
2.4. Results	56
2.4.1. Thickness Measurement	57
(a) Al_2O_3 Films	57
(i) Speed of lifting (v) vs thickness (t)	58
(ii) Concentration of the starting solution (c) vs thickness (t)	58
2.4.2. Microstructural Details	58
(a) (i) X-ray Diffraction of Al_2O_3	58
(ii) X-ray Diffraction of SnO_2	59
(b) Scanning Electron Microscopy	59
2.4.3. Resistance	60
2.4.4. Optical Property	60
2.5. Discussions	61
2.5.1. Al_2O_3 films	61
2.5.2. SnO_2 films	62
References	63

CHAPTER 3. TRANSPARENT CONDUCTING TIN DIOXIDE FILMS BY A NOVEL CVD TECHNIQUE

3.1. INTRODUCTION	64
3.2. Deposition Technique	66

	<u>Page</u>
3.3. Results	70
3.3.1. Thickness	70
3.3.2. Microstructural Details	71
(i) X-ray Diffraction (XRD)	71
(ii) Scanning Electron Microscopy	71
3.3.3. Optical Transmission	71
3.3.4. Electrical Measurement	72
3.4. Conclusions	73
3.5. Comparison of the Dip Technique for producing SnO ₂ films with the present method	73
References	75
CHAPTER 4. DEPOSITION OF SULPHIDE FILMS BY THE DIP TECHNIQUE	
4.1. Introduction	76
4.2. Deposition of CdS, ZnS and Cd _{0.8} Zn _{0.2} S Films	78
4.3. Results	80
4.3.1. Thickness and its dependence on number of dippings	81
4.3.2. Microstructural Details	83
(a) X-ray Diffractometric Study	83
(b) Scanning Electron Microscopy	84
(i) Cadmium to Sulphur ratio	84
(ii) Effect of Baking temperature	85
(iii) Effect of number of Dippings	85

	<u>Page</u>
(iv) Effect of Various Substrates	85
(v) Effect of Pre-baking and Slow-introduction into the furnace	86
(vi) SEM of ZnS and $Cd_{0.8}Zn_{0.2}S$ Films	86
4.3.3. Optical Absorption Measurement	87
4.4. Conclusions	87
References	89

CHAPTER 5. SOLID STATE DEVICES FABRICATED FROM DIP-DEPOSITED THIN FILMS

5.1. Parallel-Plate Electron Multiplier (PPEM)	90
5.1.1. Introduction	90
5.1.2. Choice of Materials	91
5.1.3. Fabrication of all dip PPEM using Al_2O_3 and SnO_2 layer	95
5.1.4. Performance Study of PPEM'S	96
5.1.5. Discussions	96
5.2. Photo Conductive (PC) Cell	97
5.2.1. Introduction	97
5.2.2. Deposition of CdS (Cu, Cl) Photo conductive layer	99
5.2.3. Fabrication and Study of Photo conductive cell (PC Cell)	100
5.2.4. Results and Discussions	101
(a) Dark and Photo Current of PC Cells	101
