

Contents

1. Introduction	1
2. Literature Review	5
3. Materials and Methods	29
3.1. Selection of ponds	29
3.2. Collection and maintenance of healthy fishes	29
3.3. Collection of diseased fishes	29
3.4. Materials for histopathological techniques	30
3.5. Materials for Tissue-imprinting techniques	30
3.6. Materials for Periodic acid Schiff (PAS) staining (de Tomasi, 1936)	31
3.7. Materials for Haematological studies	31
3.8. Materials for Immunological studies	32
3.9. Materials used for preparation of tissue sample for Transmission Electron Microscopy (TEM)	32
3.10. Histopathological techniques	33
3.10.1. Sampling and fixation	33
3.10.2. Processing	34
3.10.3. Sectioning	34
3.10.4. Staining	34
3.10.5. Procedure for Haematoxylin-Eosin stain	34
3.11. Haematological techniques	35
3.11.1. Smear preparation and staining of blood	35
3.11.2. Blood sampling	35
3.11.3. Blood studies	35

3.11.4. Quantifying erythropoietic efficiency of haemopoietic organs	37
3.11.5. Preparation of Tissue-imprints of head kidney, thymus and spleen following Ashley and Smith (1963)	38
3.11.6. Staining procedures adopted for blood smears	38
3.12. Immunological studies	40
3.12.1. Antigen	40
3.12.2. Immunization	40
3.12.3. Cell suspension	40
3.12.4. Haemogglutination Titre Assay	41
3.12.5. Plaque Forming Cell (PFC) Assay (Cunningham & Szenberg, 1968)	42
3.12.6. Transmission Electron Microscopy (TEM)	43
4. Observations and Results	44
4.1. Head kidney of healthy <i>C. mrigala</i>	44
4.1.1. Morphological studies	44
4.1.2. Histological studies	44
4.1.3. Ultra microscopic studies	44
4.2. Spleen of healthy <i>C. mrigala</i>	45
4.2.1. Morphological studies	45
4.2.2. Histological studies	45
4.2.3. Ultra microscopic studies	45
4.3. Thymus of healthy <i>C. mrigala</i>	45
4.3.1. Morphological studies	45
4.3.2. Histological studies	46
4.3.3. Ultra microscopic studies	46

4.4. Head kidney of EUS affected <i>C. mrigala</i>	47
4.4.1. Morphological studies	47
4.4.2. Histological studies	47
4.4.3. Ultra microscopic studies	48
4.5. Spleen of EUS affected <i>C. mrigala</i>	48
4.5.1. Morphological studies	48
4.5.2. Histological studies	48
4.5.3. Ultra microscopic studies	48
4.6. Thymus of EUS affected <i>C. mrigala</i>	49
4.6.1. Morphological studies	49
4.6.2. Histological studies	49
4.6.3. Ultra microscopic studies	50
4.7. Studies on blood cell profile in healthy <i>C. mrigala</i>	50
4.7.1. Morphological and Morphometric studies	50
4.8. Cytochemical studies on erythropoiesis in healthy <i>C. mrigala</i>	54
4.9. Erythropoietic efficiency of haemopoietic organs of both healthy and EUS affected <i>C. mrigala</i>	56
4.10. Changes in the morphology of erythrocytes of naturally infected fishes	57
4.11. Total erythrocyte count in peripheral blood of healthy and EUS affected <i>C. mrigala</i>	58
4.12. Total leucocyte count of healthy and EUS affected fishes	58
4.13. Haematological studies of healthy <i>C. mrigala</i> throughout the year (2007)	59

4.14. Differential count of leucocytes in tissue imprints prepare from three lympho-haemopoietic organs of EUS affected <i>C. mrigala</i>	60
4.15. Differential count of different subpopulations of leucocyte in peripheral blood of EUS affected <i>C. mrigala</i>	61
4.16. Studies on immunological status of healthy <i>C. mrigala</i> year round	62
4.17. Measurement of amount of antibody produced throughout the year (2007) against (0.2 ml) Sheep Red blood cells or SRBC	63
5. Discussion	66
6. Summary	83
7. References	87
