

CONTENTS

CHAPTER 1

INTRODUCTION

1.1. The optical-mechanical analogy: Evans-Rosenquist parameter A.	1
1.2. Gravity field as an optical medium.	7
1.3. Remarks on the equivalent optical medium.	10
1.4. Fermat's principle in general relativity.	13
1.5. Detailed objectives.	15

CHAPTER 2

THE VARIATIONAL PRINCIPLE AND THE EQUATIONS OF MOTION

2.1. Formulation of the variational principle.	18
2.2. Exact equations of motion of Newtonian form.	25
2.3. On the parameter A in general relativity.	31
2.4.(a). Energy methods for the orbits.	36
2.4.(b). Force methods for the orbits.	41

CHAPTER 3

A LITTLE HISTORY

- | | |
|---|----|
| 3.1. Historical background: a reappraisal of events. | 47 |
| 3.2. On the relation between "F=ma" optics and Hamilton's
formulation of the optical-mechanical analogy. | 59 |

CHAPTER 4

APPLICATION TO REISSNER-NORDSTRÖM TYPE METRICS

- | | |
|---------------------------------------|----|
| 4.1. The refractive index. | 64 |
| 4.2. Some special cases. | 68 |
| 4.3. Central force motion. | 70 |
| 4.4. Bending of light rays. | 72 |
| 4.5. Precession of planetary apsides. | 75 |
| 4.6. Radar echo delay. | 78 |

CHAPTER 5

APPLICATION TO COSMOLOGY

5.1. The de Sitter Universe and the Maxwell's "Fish-eye Lens".	81
5.2. Robertson-Walker Universe.	83
5.3. Light ray in the de Sitter and Robertson-Walker Universes.	85
5.4. Redshifts.	90

CHAPTER 6

AN ALTERNATIVE DESCRIPTION OF GRAVITATIONAL REFRACTIVE MEDIUM
AND DEDUCTION OF GENERAL RELATIVISTIC EFFECTS: A CRITIQUE

6.1. Hamiltonian equations.	98
6.2. Deflection of light.	103
6.3. The Kepler problem.	106
6.4. Observables in a gravity field.	111
6.5. Concluding remarks.	117

EPILOGUE
